t.

NeilLamont, those DiMakina tunes you heard recently (and you said you liked - thank you again, BTW) were all in the low-20's to low 30's in track count. No weirdness there.

It's all about gain staging, dEwD - like I said, you wouldn't run an analog console with every channel at +15 & the master there as well, so why would you run a digital "virtual" console at "0", giving yourself no headroom?

Yeah, I've played around with most of the settings (since v8). I'll give it some more playing around time. I use parallel compression (via auxes) quite a bit with the UAD compressors.

Grahamwireline wrote:

I think they're still one of the best dev teams, but they could always be better.

Let us know what you switch to when you do.

GrahamAnyone ever hear these? I've heard the smaller B&W's (DM-

series, I think), and the really f\*king super high-end ones that look like R2D2 with a tweeter on it's head, but not this series... anyone ever use them?

I ask because I was out running errands today & noticed that a local hi-fi place has 701's (not hooked up, though) and the price seemed reasonable - \$799 each. (well, reasonable for that level of quality, from what I've heard of their other stuff).

Anyone?

BTW, DeeJ - when I was out & about, I was able to find exactly ONE half-rack-height spacer... no vents, jsut a solid spacer. I grabbed it in case you can use it -I don't even know if one is even worth shipping, though - lemme know if you can use it, otherwise I can always just return i

rtunately, on my box, there was a conflict. When I removed all but the basic EDS effects dlls from the system32 folder the compressors worked again.

I still have the eventiter and modulation efx working so that good since I like them alot too.

Anyways, since I had posted in the midst of my confusion, thought I post the solution too. Just thought I'd share with you that a friend has a new CD posted on CDbaby recorded on Paris.

<http://www.cdbaby.com/cd/markorion> Neil wrote:

> Hey man, are you SURE that the Mytek convertors sound better  
> than the RME's?

The Mytek's converters sound excellent. They should sense they are 3 times the price of the Multiface/Fireface I/Os. To some people they will sound better than RME's. But sense Mytek make no affordable sound cards

with analog I/O on them it is not correct to compare them the Multiface/Fireface I/O. Mytek makes dedicated AD and DA converters only so the only comparison would be the ADI-8 DS, ADI-2 or ADI8-QS models. The RME converters used on the used on the Fireface, Multiface and HDSP9632 are some of the best you will get integrated onto a sound card. The Myteks should logically sound better than the Multiface and Fireface. If they didn't I don't think Mytek would be in business..:)

> Not that I'm doubting your word, I'm just  
> wondering if the fact that you're using a Fireface (Firewire  
> buss) vs. a Multiface (PCI buss) makes a difference?  
>

The Fireface 800 has slightly better converters than the Multiface. The Multiface has the same converters as the Fireface 400. There is not sound difference being caused by one being Fire wire and one being PCI.

> I just don't see how a better convertor set than the Multiface  
> can be had for less than some ungodly-high price point (perhaps  
> I am ignorant, though, I will allow- - i haven't tried  
> everything that's out there... i just know how good/how well  
> these reproduce accurate audio).

>

It can't. Mytek makes nothing that is the same price wise and functionality wise that comes close to the value of these RME converters. It wouldn't be fair to be comparing the price of a used or discontinued piece of Mytek gear. The closest product they make that can honestly be compared is the 8x192 with the fire wire option card but that sells for \$3900.

(859) 635-5762  
Dimitrios has an older Mytek AD/DA 24bit/48kHz capable converter. I had it here briefly before I transshipped it to him. It is a work of art. These are built like a brick shithouse and were very expensive back when they were being manufactured. When I compared it to my Mytek Stereo96 AD and DA (at 44.1/48), I could hear basically no difference at all. Dimitrios likely has the system clocked to this box as well which wouldn't hurt anything. I did a little comparison to my RME converters (and I have also compared my Mytek AD/DA's) to both the Multiface and a couple of ADI8-DS units I have here. My entire system is clocked off the distributed signal of the Mytek AD converter and I don't really think the RME converters are majorly inferior sounding in comparison to the Mytek. There are some differences but they are more along the lines of \*differences\* rather than super extreme improvements in detail and imaging. Maybe my ears just like certain converters or maybe the FF800 converters suck in comparison with the older Multiface converters, which seem to have a bit of a cult following. I have actually seen people in black hooded robes carrying torches and chanting while walking down the road outside my house with a Multiface on a small altar on the back of a donkey cart during full moons. I really sorta prefer the Multiface converters to the more expensive ADI8-DS converters. It's not like I'm going to ditch them, but there is a tiny difference that I think I probably hear, sometimes, maybe, if the wind is blowing in the right direction, the humidity levels are just right and I've had proper amounts of caffeine and sugar administered interveniously.

I'll look into your ideas.

My understanding is that even though the Paris MEC light shows 48K as a sample rate with an external clock, it is really still just 44.1K. I just want a simple 44.1K sample rate so that I can export a stereo wave file out of Paris and go directly to CD. I'm not trying to overclock or get an absurd sample rate.

Thanks again,  
Wayne
