lank">http://www.billlorentzen.com/IN_MY_LIFE.mp3

>

> Thanks and enjoy!

The only critique I have is that when I heard this it gave me an inferiority complex and made me think...."dude, you need to quit jacking around with computers and practice your musicianship because your playing sounds like caca compared to this"....so other than that and the fact that I can't come up with any other critique, I'd say it's nothing short of beautiful. Love the arrangement too. Is that Mrs. Lonentzen on vox?

;o)I've always like the sonic ne3utrality of the RME stuff but never really A/B'ed it against anything else I have here in any kind of serious way.

Yesterday I switched off my Benchmark DAC-1 DA's to use the DA's on my Multiface or a brief period. then I compared the MF converters to my Mytek Stereo DA. I was pleasantly surprised at the quality of these RME DA's in comparison. I could easily use these as a reference.

I sometimes hear folks in various forums say that RME converters are "mid level" in comparison to others. Mid level compared to what???...Prism.Weiss???.....well maybe, but we're talking \$12k at that point. I've heard Lynx and Apogee converters and I preferred Mytek to those. Since I'm comparing the RME to Mytek here and thinking that they stand up to them, I'd say that these boxes are a hell of a deal for the price.

OK...'nuff said.

Deejtrue datIf you use the lossless compression you could fit roughly twice as many CDs. Just in case you ever need to add more than 100...

Cheers,

Actually the fam is staying over in dallas for about a week. I'm flying back to PDX for a server install this weekend, then back next week to continue down to Austin. ONce I have an idea of the schedule there, I'll call and see what yours is looking like.

12' would be just the right length to be able to fashion the noose that my
wife would tie around my neck with these, with enough left over to throw
over a rafter if I was standing on the chair that she would shortly
thereafter kick out from under me.

;o)Oh, that's funny...

You can buy a speaker cable, or feed 1/2 of the starving
people in a small country for a month...

Or hell, forget the food, and buy a car!

A new custom guitar, or two...

scumbags....

I love the Bay Area Audiophiles guy too...

How about Bay Area Really Fugged-up Yahoos?

BARFY...

250_Speaker_Cable_Are_BetterYeah, but how do you prove it? There was a thread (one of many) on R.A.P.

discussing this and the point was made that while you can certainly make

cable that sounds DIFFERENT how can you know that it's actually more accurate?

[illegible]

pricing of Logic Studio. Let's be honest, DP's main user base is the Hollywood
composer crowd. Not enough to keep up with Apple's onslaught.

Competition is good for any industry, but it seems that like most industries,
"consolidation" is the name of the game.
