-o yeah !!! Good good.
About your question for comp seting:

<Dear Zmora just playing around with some tracks I recorded.

Regarding the settings someone can achieve great compession sounds with percusive sounds.

You can raise the release just a few nS

You can put 0.00005-9, yes only that low because after that the sound becomes harder to fit your needs, I guess...

A great new snare drum setting for EDS compression is:

Threshold :-96
Ratio 2.70:1
Attack 1.80
Release 0.00008
Lookahead 0.003
output 15.8

Regards,
Dimitrios>

for start.

Cheers

Zmora

I agree with much of what you said but not completely.
I think you could apply the same logic to all aspects of the recordings arts.

much cleaner than a 1176, but that does not mean that I would prefer the
TLM170 or the GML 8900 in most cases.

some of my preferences come from does not mean I have changes my mind. I

I do however feel I will need to stay somewhat in tune with the current sound
for any major market projects that I do in the future.

A separate issue is what mastering engineers under the influence of A&R men
are doing to records before they are released. Trend or not I think that
is criminal.

So I recognize my own prejudices, I think I clearly see the new trends, but

<jjdpro@aameritech.net> wrote:

Ditto gentlemen, and well said. I'm much closer to the high fidelity,
clarity is king crowd than saturate the tape crowd and always have been, but
that's how I grew up (even with 60's and 70's bands I listened to), and my
personal taste. And I agree with Gene, I also believe much of what we like
is based on what we learn and associate with the best music listening times

in our lives. A revelation on sound came for me when a friend introduced me to "high end" recordings from Sheffield Labs - James Newton Howard for one. Great music, and stunning recordings. So much effort went into getting a pristine sound, but now we've come full circle and want to rough up the pristine sound we have to get back what we worked so hard to eliminate.

I used to transfer all my records as soon as I bought them to metal cassettes on really nice Harmon Kardon deck - immediately from wrapper to turntable, needle down as I hit record - not a finger print on the edge, not a dust speck to drift onto the platter. Cassette wasn't better, but it was cleaner for a longer time (and car-compatible :-). We had destatic brushes and doodads to clean up the used records when possible, but it was never clean enough. Then came CDs - I saved so many hours by getting a CD player! ;-)

I've thought for a long time that much of what we hear in music and judge standards by is evolved preference. In truth, is there any absolute, and better yet, should there be? To some degree of course there always have been - bass in the middle to keep records from skipping, unless it's EQ'd out; and now we have 0 dBFS. The squashed war may be short lived if it even still rests in artists and engineers' hands.

Regards,
Dedric

>I think there's a degree of truth in the idea that people get set in the way something should sound and don't like change.

I don't think I support the idea though that Protools' sound is superior, and the future, and that Paris supporters are just set in their ways.

Even if I was to accept that Protools is cleaner, clean isn't always better, that's been well proven. If cleanest was always the best, we'd all plug guitars straight in to the desk, or the cleanest pre we had. We wouldn't want to muddy up the sound by running through an amp, and then into a mic. I mean that's just going to dirty the sound. That's an extreme and obvious example of somewhere where a dirty sound is fairly universally considered superior. Of course there are many guitars on records that are plugged straight in. Sometimes it's what you want. Different strokes...

I remember something Dave Stewart of the Eurythmics said back in the 80's. He said "There are no bad sounds, just bad uses for sounds". He had all kinds of instruments, some keyboards as cheap as \$10 which made cheezy tinny crackly sounds, but sometimes that's what you want.

People like different sounds, and different production styles. They always will. Are there Paris owners who only like Paris because it sounds "vintage"? Probably. Is that wrong? No. How can it be wrong to like something because it reminds you of something you enjoy?

As per my other post, I'm not convinced that the air's natural summing bus performs exact addition like that in Protools anyhow. Matter of fact I'm almost certain it would not. Does that make Protools wrong? No, it makes it a sound. It's a sound, to add to the many other options available for making sound. It happens to be the sound that people are used to at the moment, and hence it's very popular.

I imagine Protools is not much closer at emulating what happens in the air than analog gear, or Paris. Most things in nature have logarithmic curves. Like how the faster you drive the more air resistance you get. Like how the closer you get to the speed of light the more power it takes to go faster. I'd say with some confidence that air pressure works the same. The higher

the pressure you want, the harder you'd have to push, and for double the pressure, you'd need to press slightly more than twice as hard. Sound being waves of pressure, this would give them a logarithmic curve. Adding together two sounds of equal volume and you won't get double the volume, you'll get 99.9% more volume, because to create double the pressure takes more than double the energy. Protools doesn't work like that. But it is a sound, and many people like it, so good luck to them. I think saying that Protools, or any sound, is "right" is dangerous.

I don't think vintage plugs etc are holding anybody back. They're just options. They allow you to achieve a sound within the digital domain.

I think the availability of different options is a great thing. What is most dangerous is anybody who claims that any system, old, new, or whatever, is superior in every way to any other system. Every system, and every sound, is superior to others in some ways, and inferior in others.

The art form is in choosing the right sounds for the right moments. If the sound that you're after requires or benefits from a particular system, then use that system.

Personally I'm still not a fan of the Protools sound. I'm not nearly as against it as I used to be though. But I'd rather the sound of Paris, even if some consider it muddy.

Cheers,
Kim.

>I should add for clarity...

....obviously the sound measurement system of db is already logarithmic,
but the underlying math in DAW's as I understand it is not. Obviously when
you add a 20db sound to another identical 20db sound you don't get a 40db
sound (you get 26db yes?) because the level measurement is logarithmic.

What I'm saying is that I'm pretty sure if you performed this experiment
in the air, you would find that you got 25.999db, and that if you performed
the same experiment, for arguments sake, at 120db, you'd get an even bigger
drop, say 125.98db, or less.

DB is just our volume measurement system. The underlying maths in a DAW are
straight linear maths, and I don't think they should be...

....assuming that you're trying to emulate the summing that takes place in
air.

Cheers,
Kim.

>One myth I would like to dispel is that Paris sounds muddy, vintage, analog or less detailed than PT's.

It's all in how hard you hit it.

Had a conversation with SSC years ago about using Paris for classical and he really ground on me hard to try it and compare it to Sonic Solutions. Sonic has always been the gold standard for classical, and honestly I thought he was full of it, but I tried it, using the same source material. He was right, it was actually better than Sonic on a 70-piece orchestra. Some of you have heard that CD. Did it sound "vintage" or muddy to you? Of course not, you just have to treat Paris like any other DAW, and don't push it too hard and it works great for classical. An orchestra recorded with the just 2 of the best mics in the world (DPA / B&K) the best pre (no tubes please!) and a great convertor is the ultimate test for clarity. One little loss of anything and the whole thing turns to crap. It must be eq'd and mastered to perfection, but if it is, it sounds like you are in the room with the orchestra.

Paris works extremely well on an orchestra and I can tell you that unless you push the levels the sound is as real, detailed, open and clear as I have ever heard.

Personally, I think Paris murders PT's on orchestras. The clarity and lack of distortion, even on the upper harmonics of high violin notes, is really better and the soundstage and imaging is terrific.

Try not hitting Paris so hard in the mixer, push the submix masters all the way up, and listen to the audio get nice and pristine.

DCI think he's right. That crazy company has GOT to be the source of the urban myth of the JATO rockets strapped to the Chevy that ends up flying into a cliff.

That's the beauty of it. It works either way. There is an issue with the D/A converters and jitter when using the Paris clock, but with an external clock I've never thought it sounded anything other than what I wanted it to sound. Mixing conservatively yields a very pristining/accurate sounding result.....however, this is blasphemy and I have to immediately jack the submix faders into the stratosphere so I can hear all that crappy distortion that I like.

;O)

Thank you for your kind words ,here !
Regarding vocals try this and tell me how it sounds to you!

Threshold -51.8 (until it shows -18 and more gain reduction)
Ratio: 2.70:1 (magic number ?)
Attack 0.24
Release 0.0042sec (you need at least three zeros before any number here !)
LOOKAHEAD: 0.020 (WELL YOU CAN GO AS LOW AS 0.03 TRY AND SEE WHAT YOU LIKE)
output: 15.7 db

Cheers,
Dimitrios

for that type of thing they will call you, I think that it would be sad if
everyone did things the same way, (it seems to some people there is a right
and wrong)

The different flavors are like a painter's pallet. I want this record to sound vintage and funky, or I want this one to be crystal clear.

That said, I am starting to think what LaMont says is true, I mean the low end was rolled off in the old days to prevent the needle from jumping right? Also, much of the mix compression was for the same thing? now everyone has subwoofers on their subwoofers! and digital handles a wide dynamic range, now, like you said, to get the mastering engineers to chill.

 >I don't think, or at least I hope, there won't be a continued trend for FM,
 compressed radio and 64k mp3s to dictate sound. When I think of "outdated"
 I think of limited bandwidth, sometimes noisy, and often mushy sound - not a
 recording style, or even mixing style necessarily, although it does change
 based on pop culture and available technology more than science.

A while back I read a bit on the history of recording. The overwhelming
 impression and approach I've taken, and got from reading the history of it,
 is that the goal of recording has always been to recreate what we hear as
 accurately as possible. Yet, I think somewhere along the way when engineers
 quickly realized that technology was a long way from being able to do that,
 someone decided to make it a creative venture rather than an accuracy

venture. Obviously there are creative requirements that eliminate accuracy (I once tried a binaural head test-analysis mic system on vocals - sucked, but it was incredibly accurate, which goes to show that not all we hear is as we would prefer to hear it).

Hence now we have, for example, kicks that sound nothing like the real thing - where you had a "koomphhh" or "doomphhh" to start with, the "standard" is to make it sound more like a "thmp" or "dhmp" (pardon my "technical" terminology). Gating, compression, EQ, even if not necessary to fix recording problems, have become a means to not just make the mix fit together, but alter the sound to what has become the radio standard. Much of it sounds great for what it is, but it isn't about accurate recording anymore, and that makes it hyper-dependant on popular trends rather than audiology.

Regards,
Dedric

(859) 635-5762 THANK YOU - you guys are so helpful and willing to share!!

Are you using no limit at mixdown or are you using something like sound
forge and wave or other plugs to bring levels up. I have a TC multi band
I've been using on/off also... just trying to stream line to process some...

He has a Delta 1010 that he is going to use for VST rack outputs, and he wants to possibly get a ProteusX card as well... so it would have to have at least 2 slots for those... as you know, PCIe won't work. He wants something that will fit into a rack mount case with a pair of hard drives (doesn't have to be a shuttle). Thanks for replying.

David.

>>HI Dave,
Ah ok it is clearer now.
Here is what I'd do then if he wants to DIY it.

Antec - Take 3 Rack case (It all ready has a quiet 450 watt PS and quiet case fans.

ASUS A8N -SLI Premium

AMD - Athlon 64 X2 3800

Zalman - CNPS7000 heat sink

2x 1 gig DDR3200 CL2 ram

SEAGATE - Seagate 80G OS drive

Seagate 300gig SATAII 16m cache drive

FX 6200TC (they make fan less ones)

PIONEER - DVR111B

Microsoft - WINDOWS XP Professional

The board works fine with M-Audio, EMU, RME, MOTU, TC and sorta UAD.

You'll probably be looking at 14-1500ish in parts if hes gonna DIY.
Pretty much add 300-400 if you want us DAW builder types to do it instead and get a warranty and tech support and such.

Chris

(859) 635-5762Hi Chris,

Cool, thanks for the suggestions. I was leaning toward X2... nice to see you recommending a MB for it. I will be building this for him myself... we do turn-key custom systems here as well, so assembling and tweaking this will be fairly simple.

As for the PSU and case fan noise... he plays keys for a 7 pc R&B band that I do sound for. With live horns and a cossack for a drummer, I don't think we would hear a 747 warming up next to the stage! ;-) He will probably like it at home though...

I appreciate your input, thanks!

David.

I think it's great that we don't have to deal with some of the issues that made recording such a chore and required such a number of tools to deal with, but I'm not nearly as convinced as you guys that *accurate is better*. Listen to the Dixie Chicks first CD that was recorded to tape and then subsequent ones that were recorded to digital. The latter fefforts sound great, but they don't sound as pleasing to my ear as the first one. The remix of Hotel California is another example of digital awfulness. It's very accurate and sounds like pure crap, IMO.....and it was originally recorded to tape and then PT'ed. Sorry, but it doee sound terrible compared to the original to my ears. With all of the new nice shiny tools we have available today, it's possible to hear *more* as far as dugital ugliness is concerned as well. Analog gear and tape provides glue. Lots of stuff falls apart without glue.

>Everybody's got an opinion. Here we go with the PT is better than Paris stuff again. I guess this gives us something to talk about, but folks, we're all being goaded and bated here.

This is what is wrong with the record industry. There is not enough diversity in sound and music styling these days. The whole cookie cutter approach to everything really sucks. That's why the record industry was in so much trouble, five Britney Spears, Spice Girls doesn't cut it for very long. Just because a new sound comes along, the old sound shouldn't become null and void. There should be room for everything. In other words, don't follow the followers, and maybe you'll get noticed. If everybody used PT the things would be more boring than they already are!

The demographic for the record companies is, 13 to 25, so the day you turn 26 your null and void??? No music geared to a 26, 36, or 46 year old???

How stupid! Do you really think that a 16 year old would think, yuck, this music sucks, this wasn't recorded on a PT system! This music is unacceptable!

No, they listen to the song!!!! The song is what sells them. variety is good when it comes to sound and production. Both sounds should be acceptable! But then again this post really wasn't about sound, now was it!

LaMont, if you like PT better cool. Keep chasing your tail dude, your sure to end up in the same place!

>I think you've misinterpreted that anyone is saying that one approach is better than another.

On the contrary, this is just an observation in how we choose our preferences, and the fact that currently available technology significantly exceeds what was available 40, 30, 20 and even 10 years ago.

Recording is about capturing audio - period. It's production, mixing, and the concept of creating listener appeal in the music side of recording that has used it creatively. There isn't anything wrong with that, but recording has always been at the mercy of, and influenced by the available technology. It isn't a platform war, and never was - just a constant attempt to improve each element of the chain within the budgets we have available.

I once tested recording a vocal with a binaural head, test measuring system. It sucked for artistic and listening pleasure, but was incredibly realistic. Maybe that just goes to show that what entertains us artistically doesn't necessarily benefit from reality. There's nothing wrong with running a mix down to a 4-track cassette deck if that's what floats your boat creatively.

Regards,
Dedric

>Sorry, I don't see this post as simply an observation, discussion or even just
a opinion. LaMont is saying that the old analog,tape saturated, edgy, overdriven
sound is no longer valid. That we should all get over it and move on. That

the Paris signature sound is no longer in, that the new PT, Nuendo sound is where it's at. Once again, he is saying PT/Nuendo sounds better than Paris. I feel this is a baste job.

Sure audio equipment has evolved. Newer doesn't always mean better. A combination of all tools is the smartest route. I don't think a whole sound should be eliminated just because something is currently trendy. He clearly states he thinks that, that sound is done and we should all move on the new PT sound.

He can say what ever he wants, I'm just calling it like I see it.

Here is LaMont's chance to clarify!

>I have a couple of projects that play fine when only the project window is
open but as soon as I open any other windows, ugly distortion appears. It
seems to be in submix A. Any one else ever get this ? any ideas? Thanks.Hi,
Regarding the eds compressor and vox please use this as a starting point
for further search.
I think it is very good for vocals.

Threshold: -96
ratio: 1.25:1 (raise until you get -12-18 gain reduction)

attack: 0.082
Release 0.00006 sec
Lookahead: 0.005
Output: 10.9

What I found is that -96 and release with FIVE ZEROS is the must starting point.

Then you just raise the ratio until you get over -12 db (-16 is fine) gain reduction.

Then you work with attack until you get a stable compression response but around 0.082 is fine.

Output raise until you get same level in out...

So please disregard my previous compressor suggestion for vox, was a little bit fast...

Regards,
Dimitrios

>Hi All,

I am a former Paris user who still use Paris now and then, especially when I remix old songs recorded in Paris. I gave up in favour of Soundscape which I truly love.

when it comes to classical music, Paris simply has much left so desire. It nowhere as clean and accurate as the newer modern systems, be it PT, Soundscape, Nuendo, Samplitude etc.

I have a fairly large Paris setup and as much magic as it has it is quite unreliable compared to the other systems.
For example: Paris can sometimes (randomly) add strange DC offset to the files. It can depending on heat cause clicks. Aux leakage. Just to mention

what is by some percieved as warmth, sounds to me like a bit clouded midrange. I have recorded a fair amout of classical choirs in both Paris, Soundscape and Nuendo. In this genre there is simply no competition at all. My Soundscape converters (Apogee) simply kills Paris in clarity and detail. OTOH with pop/rock, especially acoustic pop/rock (live drums), Paris can sound a bit more exciting

than the others.

Last but not least, sound aside Paris is a dinosaur. The routing options leave A LOT to desire. The I/O flexibility is back to the stone age compared to newer systems. The non-sample accurate editing is a PITA. Lack of professional I/O options. Very rudimentary handling of native plugins, especially in stereo. No bussing possibilities. No VST/DX on master bus. No delay compensation. etc. ect...

IMHO most people who are sticking to Paris are doing it for financial reasons. Given the very low price the SH systems are going for, the price vs. sound preformance ratio is amazing, compared to other DSP-based system. In a true professional enviroment with clients hanging over your shoulder, the compromises are just to big, all IMO of course.

Just my 2 cents.

>Hi All,

I am a former Paris user who still use Paris now and then, especially when
I remix old songs recorded in Paris. I gave up in favour of Soundscape which
I truly love.

when it comes to classical music, Paris simply has much left to desire. It
nowhere as clean and accurate as the newer modern systems, be it PT, Soundscape,
Nuendo, Samplitude etc.

I have a fairly large Paris setup and as much magic as it has it is quite
unreliable compared to the other systems.
For example: Paris can sometimes (randomly) add strange DC offset to the
files. It can depending on heat cause clicks. Aux leakage. Just to mention

what is by some perceived as warmth, sounds to me like a bit clouded midrange.
I have recorded a fair amount of classical choirs in both Paris, Soundscape
and Nuendo. In this genre there is simply no competition at all. My Soundscape
converters (Apogee) simply kills Paris in clarity and detail. OTOH with pop/rock,
especially acoustic pop/rock (live drums), Paris can sound a bit more exciting
than the others.

Last but not least, sound aside Paris is a dinosaur. The routing options
leave A LOT to desire. The I/O flexibility is back to the stone age compared
to newer systems. The non-sample accurate editing is a PITA. Lack of professional

I/O options. Very rudimentary handling of native plugins, especially in stereo. No bussing possibilities. No VST/DX on master bus. No delay compensation. etc. etc...

IMHO most people who are sticking to Paris are doing it for financial reasons. Given the very low price the SH systems are going for, the price vs. sound performance ratio is amazing, compared to other DSP-based system. In a true professional environment with clients hanging over your shoulder, the compromises are just too big, all IMO of course.

Just my 2 cents.

Babul track with Paris with folks looking over my shoulder all the time. It's a matter of knowing what to do and how to do it. My system is very stable.

As far as financial concerns go, yes, I stick with Paris because of financial concerns. If I had the money, there is not doubt at all that I'd be tracking to a pair of synced 2" 16 track machines and an API legacy console.

Different strokes ;o)

LaMont, if you like PT better cool. Keep chasing your tail dude, your sure
to end up in the same place!

I am an PT HD3 owner and a 5 card Paris owner since 1997. I don't know if
that last statement was insult or not??

If so, then you are as ignorant as you sound on this thread..
LaMont

please read what Dedric stated. Second, this not a bate,nor a DAW war..For the record, Samplitude sounds the best(imho)...

That being said, you completely missed the point. The 1975 sound is valid, but lets not stay there..!! Do you understand!! Now!!

You idiot!!! I would say alot more, but I don't know and won;t waist any of Kim's precious web space responding to your idiotic take on this thread..

Thanks for your clarification. Like I said, use all tools. That tape saturated,
over driven vintage sound fits a specific style of music well. I wasn't
out to insult you, my point was, if you pigeonhole yourself with the PT sound
only, your stuck in one place with your sound. These days, that is just
about everybody's sound. The cookie cutter sound.

>DJ, I was not referring to stability as much as compatibility. In a crowded pro market you either need PT compatibility, or full OMF support (working OMF), both which are lacking in Paris, which makes it a time consuming and cumbersome process, especially when you are working with large track counts.

And yes, you are absolutely right;-) I still remember the days when I tracked to a G24S through a Soundtracs board. I miss the fun and the feeling of being a "real" recording engineer, ping-ponging and carefully plan your every move.

A full analog "state of the art" joint would be a dream.

At the same time, I can't say I miss running a mix 14 times because my left hand twitched from lack of sleep and bumped the guitar solo 1db higher than I wanted it; or writing down every setting because I'm anal about being able to recreate what I created.

I absolutely love having complete recall and full automation in DAWs though. I sleep more now, at least I did before we had kids... :-)

If someone gave me a fully equipped analog studio, I wouldn't turn it down though.

Then you don't know how to use Paris, and I have the tracks to prove it.

Samplitude is competitive with Paris on orchestras, Nuendo is not.

DCEveryone is making good points in this discussion, but remember, unless we are producing film soundtracks, (or similar), our sounds, be it music, voice or fx, are mostly going to be heard on an MP3 device of some sort, (player

or radio), at least until the new generation of HiDef players are released, and then we are going to have the format wars starting all over again. No matter what equipment we use, the end result, in real terms, is MP3, (or MP4).

>Hey DC - have you qualified what you didn't like, or didn't work with Nuendo
for classical? I'm curious from a technical perspective, regardless of
preferences, and not to spark further debate over which is "best". I have
found noticeable differences in how Samplitude handles gain vs. Nuendo,
although at unity gain, they sum identically. Thanks!

 > DCHey DJ,

Point taken.. However, I think it's more perception than real quality. For example: Just yesterday I was listening to one of my all-time favorite albums/CD..Steely Dan's Aja!! While Deacon Blues is playing, I start thinking, -Is his album great because--

- Great Sound quality/engineering
- Great songs
- Great performances.
- All the above

We, if I'm honest with myself, I'd have to say that All could apply, BUT, when I listen to the drums, they sound like cardboard boxes...Chuck Rainey's Bass is not a true representation of a Fender Precision, it has been dumb-down to thuds.. Horn-Fine, Rhodes-fines, Guitars-Fine..But, is that way a band sound "naturally".. Or is it the cookie cutter approach to mixing..Getting the tight mix sound..??

Maybe Bruce Swedien approach of analog to capture, then off to digital land is the sonic way.. Lord knows his productions with "The Gloved" one are truly "works of sonic art" , productions, engineering second to none..

But, to say something is pleasing to the ears is a learned behavior of the "RecordSound".. The old guard engineers for some reason were "scared of the digital sound until they were able to make it sound close to 1975. Audio tools are just that tools that are like color palettes for an artist. But, it seems that no matter the strides in technology, the old guard wants to keep the overall sound 1975 regardless of what recording medium you are using (2inch,ADAT,D-88,MDR, DAWS)..That's disturbing to me..

I choose Polesoft Lockspam to fight spam, and you?

<http://www.polesoft.com/refer.html>"Best" is unknowable unless someone recorded the same orchestra

with the same mics, pres, and convertors at the same performance.

What I know is that I have mastered and recorded over 200 classical CD's and Paris sounds even better than Sonic, which I can nearly use blindfolded. This with the exact same material from the same source DAT tape. Both examples were flown in, in real-time from a Sony 2800 DAT player, one into Sonic one into Paris. Paris sounded better.

No, you can't record classical with Paris on-site using the onboard convertors and expect perfect results, but what you can do is record to any of the good portable media we have today, bring the material back and fly it in on sp/dif, then post and master using the source deck as clock. Do not push the levels like in pop music, and if you have a good ear for EQ you can get results that are spectacular.

Greatness in classical is not measured by summing tests or checksums, but by the conductor. (One of my conductors he

Kim,

Looks cool. Post a link to it's specs. =20

I'm curious.

Tom

"Kim" <hiddensounds@hotmail.com> wrote in message =
news:444089fb\$1@linux...

Not quite in service yet. It has to charge for 8 hours first.

But it's in the building. :o) There was a line at the store out on to =
the
street. Business is booming in computer parts on the Easter weekend. I =
got
it though, and it's unpacked. Now I've gotta load up some software and =
see
what I need to tweak before I put it in service.

Thank you again to all the people who donated. Excellent work. And =
you'll
note we've had no outages since the server has been taken off the UPS =
and
plugged into mains. :o) And hopefully once the UPS is on we'll have =

even

less... or, well, not less than none of course, but, oh you know what =
I
mean! ;o)

Cheers,
Kim.

Not sure about the Aussie version, but the US one is:

http://www.apc.com/resource/include/techspec_index.cfm?base_sku=3DSUA1500=X413

Kim, what version of Power Chute did that come with bro?

AA

-----=_NextPart_000_00BC_01C6602C.75EE0B00--Quantization and math errors in the playback engine, for one. A to D convertors is another.. I'm sure that there is more but those are the basics that come to mind immediately for me. Plus, I think there is definitely something to the *can't measure why they sound different, but do* theory.

I choose Polesoft Lockspam to fight spam, and you?
<http://www.polesoft.com/refer.html>Hi,
This error messege pops up when I hit the record button.
"Error in queuing project Error code 1879048233/70000029."
Wha' happen?
It only happens on one song.

How do I fix the situation?

Thanks for the help. On 4/14/06 9:58 PM, in article 44406f63\$1@linux, "DC" <dc@spamthemoon.com> wrote:

Obviously either Yamaha figured some part of it out or Advanced Audio Master Quality is euphemism for "sucker". ;-) You know I'm just making light of a debate that has been raging for as long as 1's and 0's have been around, not discounting what you are saying about the audible differences you hear. Developers don't just guess at techniques to improve quality. There is a science and technical reasoning behind it (usually, unless marketing holds all the marbles) - but that's why they do what they do, and I don't. I used to, but it drove me batty (hardware/software dev - too tedious for me).

If there is a way to generate a result, there is a way to test it, because that's the way someone found it to begin with - testing, trying and guessing. The fact is, a 1 is a 1 and a 0 is a 0, but the problem comes in how strings of them are interpreted into sound waves, and all the variables in between, and so the likelihood of simplified testing at the user level flies out the window.

> retarded to insist that something is not there because some test
> didn't show it.

And also it is often the expectation of the test that leads us to results that aren't there. The brain is a tricky interpreter, and that is why I there there is usually a way to ferret out the anomaly and give repeatability and solidity to what we perceive, or don't perceive.

>

You aren't the first to express displeasure with Steinberg, and I completely agree about demos - I could have given them a demo that killed anything I've heard them put out, as could a million other people, but maybe demo makers just don't get paid enough to do it right. I have clients with the same mentality - put all your eggs in one basket that might look good on paper and leave nothing left to hatch and grow the chickens with.

Some companies seem to take a developers' mindset to marketing ("It's great code, surely everyone can see that!"...well, no, not without Code Warrior and a CS degree...). I can think of another well known to this group that did the same.

Actually I was referring to the subtleties of summing and audio quality,

which I assumed you were referring to when saying Nuendo couldn't cut it for recording classical. I presumed you had put them side by side and found one to be missing X where the other was wider at Z. To detect that level of detail obviously requires a quiet studio environment. Now, whether the material rocks or sucks is another matter entirely, and no doubt should be the first consideration for booth reps.

Colorado, so I'm on the same side of the Mississippi. A bit of a hike, but maybe sometime we can put these tools to a test for a musical purpose beyond just comparing bits and bytes.

>Heheheh!!!!!! Well, that's good to know because I'm getting ready to jump back in and finish it up. My new mobo just came in and the studio is up and running again. Looks like the one I was using previously (a refurb that I got from NewEgg because there were no new ones available) was defective. The new one is a bit snappier and feels more stable than the other one ever was. Anyway, as for the bass, I did reposition the subs about 1' apart almost centered on my sweet spot. The previous positioning was partially phase cancelling. the LF is very obvious now and translates very well. I've got the system wired in to a stereo downstairs that is driving a pair of ADS 1520's in our rehearsal/drum tracking room. Those puppies will definitely give youif not a reality check, then at least a *consumer hifi in the living room* check.

I do need to get my distances measured a bit more precisely though. Seems like over the last 2 1/2 years, things have grown legs or something.

;o)

Aaron,
Did Kim get the 1500VA version? Looks different. Specs seem good =
although I'm not
sure what's good enough besides time and wattage.

Sync to mains ?
Crest voltage ?
Filtering ? =20

Tom

Ever seen the code for a word processor, let alone a DAW?

Oh yeah, that's simple...

So you do a cancel at one point in the process and then tell
yourself something you can hear is not real?

We hear better than we can measure. That may change someday
but it ain't here yet.

Now what happens when something IS different? If you can't answer the above question do you convince yourself that you are hearing things? ARE you hearing things?

How you answer those questions will determine if you are an audio engineer or an IT guy.

DCWow, this is a truly heated discussion. I sense it triggers all kinds of emotions.

Well, DC almighty. It seems like it is difficult to argue with you since you have the best ears on the planet and that your opinion is some kind of

operator which gives you the power to simply tell a fellow Paris user that than yourself.

Please direct us to some tracks to prove your superiority as a Paris operator and sound engineer. I need not to say that the comparisons should be on a scientific level and not some bullshit "feeling" or "it sounded better yesterday with Paris" comparison.

I choose Polesoft Lockspam to fight spam, and you?
<http://www.polesoft.com/refer.html> If you can get business edition on it, you'll LOVE it. It even
emails you
when things get out of whack.

>Excellent. That's what I like to hear. Well this one only has to run a single box, and I don't plug the monitor into the UPS as I don't really need to. So it's just running one box and the router. This unit is well qualified to do more, but I went the cheaper option last time and got burned with it failing 2 years later. I figure this puppy will last 10+ years (with a battery replacement half way). Hopefully 20 years if I can still buy batteries for it. I wonder if the newsgroup will still be around then?

Since you mention it I could sure use some beer money. ;o) Not because I'm out of money though. I've gone and stuffed up today, and it's all the UPS's fault!! ;o) I assume it's the same in the U.S... over here the EFTPOS cards have a daily withdrawl limit. Mine is \$800. I spend \$569 on the UPS, another \$50 on other bits I needed to change UPS's, and then bought some other stuff, and suddenly my card started coming up as declined because it's over the daily limit. It's infuriating! I've still got cash, but it's stuck in the account and I can't get it!

I was planning on going to the pub this afternoon too, just for a short burst,

but I've only got \$2:70 in my wallet! ;o) I'm thinking of calling them and asking "Look, I've got \$16 available to withdraw. can I create a \$16 Eftpos tab and drink a couple of pints? ;o)

Indeed I think I will. ;o)

As for that actual beer button, I do plan to do it (how could I not ;o). I hope nobody gets the wrong idea from it and thinks I'm in it for the cash. ;o) I'll see how I go over the weekend. I'll be putting a big peice of text on it which says "Now there is no obligation to do this... in fact, I would encourage people not to do it, but if you must, this button will donate to my beer fund". ;o)

....but if the total on the beer fund reaches half as much as was donated to the UPS I'm going to send most of it back. ;o)

....or have one hell of a night. ;o)

Cheers,
Kim.

>If Steve is using direct WC feeds to the BNC inputs of each MEC, I would
still advise adding the UseHouseSync=1 to the Paris.cfg file and also
opening Paris from the main .exe file in the EMU directory in Program Files,
setting the project that opens to sync source=word clock and saving this as
"default project.ppj" both in the EMU directory and on his desktop. then
open Paris from this default project.ppj on the desktop. Leave the Aardsync
set to 44.1. Paris likes to open to 48kHz sample rate when syncing to an
external WC, even if the WC is set to 44.1. Once this project is open, he
can navigate ot his other projects which are set to 44.1 and he should be
good to go.

[illegible]

software on it, and it's the only box that plugs in to the UPS, so there's no box which could run this software and warn me. Unless there's a Linux version on there, but there's no mention of it on the disk.

So it's really going to be a case of loading the software on my windows laptop and configuring the UPS to act like I want it to, and then leaving it to do it's thing unfortunately. An email would be fantastic if I could make it work though.

I should check the Linux community and see if they've made anything which will work on it. Seeing as how major UPS players aren't producing Linux software, I'd make a guess that the Linux community has a solution.

Cheers,
Kim.

Absolutely, but it does not follow therefore that all of this is both known and quantifiable. It's not. Look at the tremendous variables in phase shift and group delay in various eq's, both analog and digital! But wait, it's just 1 & 0's right?

```

>If there is a way to generate a result, there is a way to test it, because

```

Genius. Here's your degree. I wish I had said that.

So, why doesn't
 anyone know why the sound changes when you write it to CD?
 Of course, different D-A and all, but it is different even when you

pop the CD player into your D-A for your DAW!

There is more to be learned. period.

>And also it is often the expectation of the test that leads us to results
>that aren't there. The brain is a tricky interpreter, and that is why I

Yep it is called double-blind testing and one pound of it is worth
a ton of circular reasoning about 1's and 0's.

>Actually I was referring to the subtleties of summing and audio quality,
>which I assumed you were referring to when saying Nuendo couldn't cut it

>material rocks or sucks is another matter entirely, and no doubt should
be
>the first consideration for booth reps.

Well I've never gotten that far because the company is run by
people who are not interested in me as a client. I suspect that
explains why so few classical people use it, even if it is as good
as the others. I refuse to reject the evidence at hand that these
people do not care about audio quality and treat customers who
call them like dirt. Now, you call up Sequoia and spend 2 hours
sitting down with a product that sounds wonderful and works
great, and they give you their cellphone numbers, and it gets hard
to find the diamond in the mudpile over at Steinberg.

People who do classical are real serious about their work. Funky and
warm with a good groove means nothing. It is way
different from pop because you literally cannot overkill the sound
quality. Listen to the better Telarc or Dorian stuff. A good guy
can do better work with careful mic placement, a great convertor
and just the right EQ in post, all at 44.1, than a lesser guy can
do at 192, no matter the gear, yet so many people think you can
determine quality from specs and numbers... yikes!

>Colorado, so I'm on the same side of the Mississippi. A bit of a hike,

your opinion? Yeah "science" like that which produced the music?

Nah, it's art and if you can't hear the difference, then you are in the
wrong business.

Say, do they still let you have mothers over there?

If you are so humble, try contributing something to this group
besides trolling and baiting, ok Buhu??

I want Smaartlive, but I always do spend too much. Right now I
use the contractor Audio Toolbox on FFT into a Mac laptop so I can
get a big bright display that I can see across the room. Terrasonde
got bought by Sencore and I don't know much about their present
gear. I would stay away from hardware and buy an analysis app.

MLSSA is good too, but the PC guys say there are better/cheaper apps. I can't remember at the moment.

Suggestions anyone?

DCFantastic.

experiences

were non-disputable. It is YOU who put that angle to the discussion. Please

any of the anomalies I mentioned. Miraculously you never encountered them???

Nuendo, which you mention as inferior...

BTW. What I meant by scientific was simply a proper A-B comparison with all other things being equal with perfect level matching in the same environment with the same tracks.

There are more things to the sound than just playing back raw tracks. For example, the possibility to properly route drums to a separate bus and process them affects sound. I know it can be done in Paris, but how long does it take and how easy is it compared to other systems?

I have just installed a second EDS card. When I load Paris it tells me that I have "Error in initializing . . ." - "No interface connected to master card". I have tried switching my interface from one EDS to the other but I get the same problem. When I disable the driver for one of the EDSs, or have only EDS plugged in, Paris loads fine - ie. I do not have a faulty EDS card, they both work independently.

Summary: Both EDS's work fine as a single card with my interface - which is "Interface 2". When both cards are plugged in, they are in slot 4 and slot 5 with IRQs 20 & 21 respectively - there appears to be no conflict. I'm using XP, with Version 3 of Paris which is working fine with one card. I just can't seem to get Paris to load with both EDS cards.

Any Ideas?

Cheers,

Chris. Observation if I may; your words are a dead give away that the "heat" and the "triggers" are yours bro.... you've been in the bathroom too long.

Regards,
W. Mark Wilson

That's 14.5 hours from the time on this post.

Should only take 15 minutes or so I imagine...

Cheers,
Kim.wearing those dark glasses to hide the...well you know...is a good
idea you crazy man you.

> Hi All,

Does anybody know if you have to have a 442 or a MEC to run multiple EDS cards? I only have an "Interface 2" - 2 in's and 2 out's. With 2 EDSs Paris gives the following error on launch - "No interface connected to master card" - even though my interface is connected to the master card. All cables are connected as per instructions.

Thanks,

Chris Griffiths.

P.S. Unfortunately I don't know anyone who still uses paris with a MEC

interface I can try (From Australia).I have a Trap Kat drum electronic drum set and think it's time to get a new set. This one has 24 pads which allows for a great variety of drum sounds but it has no windows program to configure the midi parts of it and I have to use an external sound module (my motif keyboard) for the sounds. To make matters worse, the sensors fail every 2 years. I've had it for 7 years. So every 2 years they want \$200 for a new film pad.

So.....

Is there an electronic drum set with lots of pads that is reliable?
Is there a windows midi interface program for it?

Ideally I want to have a couple thousand drum sounds in a library and be able to EASILY build drum sets based on them, then easily switch drum sets. I want to be able to easily configure the pan/volumes of each drum in the set through a windows midi app. Can this be done? Easily?
This is 2006 for crying out loud.

Thanks.

IF2s don't have sync capability, thus can't be used as the only interface in a two card system. You will need 2 442s or 2mecs. 2 442s should be a really cheap way to go.

I sometimes get that when (I'm running 2 EDS XP also). I find that if the MEC's are powered down when I boot I get it , but I also get it randomly.

If I try Paris 2-3 times it always seems to work.

Thanks,
Dave

>Lots of pads + good quality = \$\$\$\$

For Mesh Pads - Roland, Hart Dynamics, Pintek

For rubber pads - see above and add Yamaha

You're still going to need to interface these pads with your computer so use either a dedicated interface unit like an older Roland PM 16 or a module like an Alesis DMPPro (or any module for that matter) then midi it to your computer and use your choice if Drum program...I use NI Battery and it's quite the beast

>Hey guys,

I've just set up to record my new band. Pretty straight forward 14 tracks off the floor. I've got everything going through the patchbays into an Allen & Heath GL 24000 board and direct channel outs to the MEC.

The weirdness I'm experincing is that the channels, 1, 4, 9, 10, seemingly, for sure 1, 4 and 9 are , rather than going to their respective MEC inputs, all lighting up on the #9 MEC input channel.

I'm not going through the GL's matix, just the direct outs on each channel and it's not a Paris patchbay issue as they are all lighting up the #9 MEC input led. I'm using a custom made snake to get to the mech room - 4ft away - but I don't see how it could be the snake. It's a new A&H board and still under warrantee, but I really don't want it to be a flakey board, but I won't rule it out either, though I don't see how you'd get that much "crosstalk" on non-neighbouring channels.

Other than that everything is working tickedy-boo.

Any suggestions where/how to start diagnosing this?

jefl use pintech/alesis here. but I'd like to get the Roland td-20 module. it's very robust, accurate and sounds quite nice. beau coupe bucks though, and as I'm not playing live with them, can't justify getting. I also don't like the mesh heads. I have Even's Ambassador's on now, with the underlying padding removed and the are remarkably real in feel. I found that the mesh heads "give back" too much and are very fatiguing on the wrists after an while... don't want carpel tunnel syndrome.

I actually only use the alesis modules, 2x pm-pro's - one for cym's and snare one for kick and toms because of "voice-eating", I only use them for monitoring. They go into the comp via the midi on the hdsp card and are assigned to BFD drum software - which i might say is phenomenal sounding.

sorry if i'm not being too helpful, just wanted to chime in.. ;)

I've been getting that error alot lately, with no loops or punch, so I
jacked up the config values, fixed the front of the files to exhibit 0
fade in and it seems to have taken care of it....for now....lol

Oh, now you are all reasonable and "I was only doing this" and blah blah...

You were trolling. Now you want to have a debate? Tell you what, why don't you actually contribute to this group for a while? Share your favorite mics and pres. How about some tricks getting a great bass sound? What do you use for choirs?

Then I will be happy to share with you all the details. But when you come one here with a "reality check" and then accuse ME of a lack of humility, you are nothing but a troll.

>were non-disputable. It is YOU who put that angle to the discussion.

EVERYONES experiences are disputable.

>Nuendo, which you mention as inferior...

Brian doesn't do symphonic music, he does pop and works at a modern church. I'll bet he still runs Paris at one place or another. None of us cares who leaves and who stays. I have clients coming here this morning who think Paris sounds fabulous. Now show me where your opinion should count in the whole equation?

>BTW. What I meant by scientific was simply a proper A-B comparison with all
>other things being equal with perfect level matching in the same enviroment
>with the same tracks.

Well, Paris killed Sonic Solutions in that very test, and NO ONE claims that Nuendo sounds better than Sonic. My point was that if you believe there is a lack of clarity and detail in Paris compared to something else, than you are using it wrong. I stand by that point and have done the work to prove it. Now, if you want to add something to our little group instead of dumping on it, I will send you a CD, all the way to Sweden, to let you hear some of it.

>There are more things to the sound than just playing back raw tracks. For
>example, the possibility to properly route drums to a seperate bus and process
>them affects sound. I know it can be done in Paris, but how long does it
>take and how easy is it compared to other systems?

Don't need this for what I do. Glad it works for you.

If you wish us to act collegial, then act like a colleague.

best,

DCThe TrapKAT has a template available online to map the EMU Emulator X drum samples. You can put something like this together pretty cheap compared to a Clavia Ddrum or Roland set.....but these now have mappings for BFD if you want to use a computer for playing BFD live (it will need to be fairly powerful though)

>>Steve,

If you are using 3 x MECs, then this is how to get you system to work.
follow these steps exactly:

Use good quality BNC cables to run from your AArdsync to the MECs. the
shorter, the better.

Terminate the BNC outputs of each MEC with 75ohm terminator caps.

Now go to C://Program Files/EMU/Paris and add the following line to the
Paris .cfg file:

```
UseHouseSync=1
```

Save the .cfg file and reboot your machine.

Now, start your WC module, set it to 44.1kHz, then power up the MECs, then
go to C://Program Files/EMU/Paris and boot Paris from the Paris.exe file.

When Paris opens, set the sync source of the project to Word Clock and set
the project sample rate to 48kHz (it is extremely important that you use
48kHz-Paris won't properly lock to external WC without this)

Now save the project to C://Program Files/EMU/Paris under the name "default
project" (no quotes). Now also save this default project to you desktop (do
not just use it as a shortcut-the one in the C://Program Files/EMU/Paris is
a backup in case the one on your desktop gets corrupted).

Now close Paris and reboot your machine. You can now launch Paris from the
default project on your desktop and it should sync reliably. don't worry
about this being set to 48kHz. Just open one of your existing projects that
is 44.1kHz and you should be good to go.

I've been doing this for a long time. I've got 3 x MEC, 3 x RME HDSP cards
(96 x lightpipe I/O plus 6 x spdif I/O), a Lexicon PC90, a POD Pro, a
Quantec Yardstick and a TC Electronics D2 all receiving sync from a Mytek WC
distributed through two Lucid WC distro boxes and routed in and out of
digital patchbays. None of this worked reliably until I set my Paris default
project to 48kHz. Now Paris and all this other stuff locks up just fine but
you these hoops are necessary to jump through if you want Paris to reliably
sync to an external clock.

Regards,

Deej

-----=_NextPart_000_0016_01C66092.D577D590--Chris, here's the problem. Once you move past one EDS card, you have to use either a 442 or a MEC interface - IF2 does not work with more than one EDS card unless you have it plugged through the 442/MEC. Sorry bro for the news, but picking up a used MEC or 442 these days is dirt cheap.

That was my initial impression of the VDrums (TD10) until I actually had to
record with them

the final verdict....Donkey Balls

Great for practice or rehearsal.

BDF or DKFH are a great way to go, but you'll need horsepower in your rig
for accurate triggering from what I hear...

The ddrum module (from what I've heard) is probably the most realistic
module but the pads and # of inputs is limited.

The complexity of code in a DAW has no bearing on the fact that an audio file is just 1's and 0's. At the level that a DAW reads those values two files with the same set of values should read exactly the same by the DAW, theres no way for it to see a difference.

>>There's

So I have to be either or? If you hear something different then your mind is probably fooling you. Theres many variables at play, you'd have to examime each case induvidually. It's hard to just sit here and making sweeping statements without looking at the details.Still a worthy investment.

>>I can get an extra battery pack for the UPS for \$270 Australian (about \$200US).
Hence if the amount starts getting close to that I'll go and buy one. There
are a couple of donations already in the kitty for that.

The extra battery pack will give us 3x the backup time. I suspect backup
time as it stands will be about an hour at a guess, so we should get about
3 hours with the extra battery. I'm completely guessing on the times though.

Cheers,
Kim.

I'm in Australia and still use Paris. In Northcote, in Melbourne. What city
are you in?

Though the other guys are right. With two cards you'll need a 442 or an MEC.
442's come up pretty cheap on the for sale site.

And you'll still be able to plug the Interface 2 into the system. There's
a plug in the MEC so that you can piggy back it on to the MEC (I assume the
442 has that as well? Anyone?)

Cheers,
Kim.I thought Kim was planning to come out of the closet...

> For electronic drums: My DDrum 4 kit has taken a serious beating for
years without complaints or failure. I have the cast precision pads

which they don't make anymore but you can find that version of the kit used on ebay. I've replaced the heads with long lasting mesh heads which I prefer to the standard drum heads, but you can use either with those pads. This setup offers positional sensing.

For live I use the internal sounds which are reasonably responsive and convincing. It was the most convincing electronic set at the time I chose it. Still one of the best. I recently got a DW/Pacific Chameleon kit (mesh on one side, regular head on the other) to try with DDrum triggers. Can use it as an acoustic kit or as a trigger kit.

For recording I sometimes use DDrum samples but more often trigger Native Instruments' Battery 2 via MIDI to control bigger sample sets (you can also sample your own sounds for Battery 2). I also use additional pads through an Alesis D4 so I can trigger my 6 tom, 7 cymbal, plus a few specials, mondo kit. I built my own extra pads out of Remo practice pads, old mouse pads and piezo pickups, they've been surprisingly long lived.

If I were buying a new electronic kit I'd give serious thought to the Yamaha DTXtremeII S since it has more trigger inputs than the DDrum4, plus other useful extra features, at about the same price point. Doesn't look as well built, though.

A DDrum5 is said to be under development but who knows if or when we'll see it.

The Roland TD20 is an improvement over their previous efforts but overpriced.

The Trap Kat always seemed like a cool unit to me. Compact. But I like my DDrum kit's layout. I ditched the rack and have it mounted on standard hardware, plays like a regular kit.

Another option: You could build your own pads or throw triggers onto an acoustic kit; use whatever you want to get trigger-to-MIDI (it wouldn't have to sound good internally, an old Alesis or Roland, or maybe someone has done it in software); and then use Battery 2, a general purpose sampler or one of the preset drum romplers like BFD for your actual sound library.

Cheers,
-Jamie
<http://www.JamieKrutz.com>

I choose Polesoft Lockspam to fight spam, and you?
<http://www.polesoft.com/refer.html>From what I can tell on the site, this only works with Smart-UPS
which doesn't
include mine.

Bummer. Sounds good though.

Cheers,
Kim.

>I tried really hard to like the TD10 and spent time trying to get it to sound good using the simplistic programming interface but I have to agree about that box. The toms sucked, in particular.

I haven't spent much time with it but from limited exposure I think the TD20 is improved. I wouldn't dismiss that one without trying it, if it's within your budget. I can't say if it's as good as the DDrum4 or how it compares to the Yamaha DTXtremeII S.

BTW, I think the PODXTLive is better sounding than earlier PODs.

Cheers,

-Jamie

Yes, although the initial impression was WOW upon close scrutiny they were just lacking that "je ne c'est quoi"

I could live with the toms and kick and most of the percussion but the snares hihats and cymbals...total ass

Yeh all done. Gee you were quick off the rank to get on board once the server was back up. ;o)

Should be good now. AND I was reading the specs on the side of the UPS box... looks like we might get more like 1.5 hours or more out of this unit I suspect.

All good. :o)

Cheers,

Kim.Well from one point I guess is actually is. We're at 50Hz here. Aren't you guys at 60Hz?

Though I'm quite sure it travels the same speed down the wires. ;o)

Cheers,

Kim.

Hehe! What the?!? How'd you get that? ;o)

You'll need to put 613 in front of it to get here from your parts.

Give me a call if you like. :o)

Cheers,
Kim.Carefull what you ask for! :-)

David.

[illegible]

>Hi Paul,
The machines if I remember are all using 2 MADI cards with a couple of the newer ones using 3. The recording drives are Raid-0. Brian explained his backup setup once but sense it is once of Brian's Frankenstein creations I don't remember how it was setup. He only uses Paris in his personal studio setup As far as I know at the moment. The Lakewood setup is pretty complex and mostly MADI based going to the Euphonix that I'm not sure how he would even integrate Paris into it. Those machines are in almost constantly used state. Usually recording and routing live feeds from a few hundred sources. The setup they use its crazy that even DJ would be jealous of it.
I think he might being Paris in some of the Post prod mixing stage for DVD CD projects not for the live recording. 90% of what he does is in Nuendo. No other app would even be able to do it anyways. The sonic results are excellent. He's very familiar with how Nuendo handles the audio so knows how to mix in it.
The Opteron /RME Madi combo is probably our most popular combo for the

"Pro" user types. Even though honestly most don't need it...;). Compared to what they would have to spend on a HD system its a steal and sense they can use a PTHD setup in the machine even at the same time if you have the slots. UAD cards are the only things that can give people headaches. But thats true on almost any current system at this point. Intel or AMD. The TC power core MK2 work great on them. If someone is using 2 or more UAD s we try to suggest a Magma which fixes allot of the UAD issues. The Opteron setups make awesome sampler setup. Can't wait for Vista to come out and software/ hardware stuff with it to use the 16 gigs of ram you can use on the Optérons.

I've been slowly when I've had time to go through our client list sense it's pretty extensive right now but our web page is way out of date.

The most recent ones that I can remember ATM-
Frank Filipeti
Gary Paczoza
Steve Bishir
Remote Recording

They are all using Madi cards if I remember correctly.

Chris

Now, some of you may have picked up that I enjoy the odd beer. ;o)

which beers are in the fridge each month when I do my beer shopping. :o)

there's not that much from the U.S.

I'll see if I can't find some of them and give them a go. :o)

I mean you guys must know something about beer. ;o)

Kim.

VSO? Vancouver Symphony Orchestra? ;o)

I should have made a point of including some more outlandish Australianisms.
Maybe thrown in the odd "Crickey" for flavour. A few "Strewth"s. The odd
"Stone the crows!". ;o)

Cheers,
Kim."Jesse Skeens" <jskeens@gmail.com> wrote:

>The complexity of code in a DAW has no bearing on the fact that an audio

WHAT? it has every bearing on what is done to them, and that
changes dramatically according to that very-complex code.

>At the level that a DAW reads those values two
>files with the same set of values should read exactly the same by the DAW,
>theres no way for it to see a difference.

That's assuming a lot.

>So I have to be either or? If you hear something different then your mind
>is probably fooling you.

And there it is. As silly as some of the "golden ears" are, you guys are much, much worse. You reason backwards from your assumptions and convince yourself that something you hear is not there. Then one day your assumptions are shown to be invalid.

>Theres many variables at play, you'd have to examine
>each case individually. It's hard to just sit here and making sweeping statements
>without looking at the details.

Thank you. And a decent percentage of people who hear things that you cannot measure are what drives forward progress. Remember the sound of the early Sony 1630/1640 decks? The techies all said the same thing you are saying. It's fine, it's just 1' and 0's and your mind is fooling you.

BS

best,

DC http://www.atrservice.com/products/item_details.php?item_id=13&dept_id=3

Showing my age... ;-)

David.

I choose Polesoft Lockspam to fight spam, and you?
<http://www.polesoft.com/refer.html> Ah, so at a lower pitch. ;o) Hehe, fair enough. Though after a
few beers
you'd probably find the VSO would only be -5% or so. ;o)

Cheers,
Kim.

>> Cheers,
>> Kim.Ah, I remember that one. I had some when I was over there back in 99 or whenever
it was. Didn't enjoy it much, though my beer taste has expanded since then.
As I recall it was like "the third beer". There was Bud, Miller, and Sam
Adams, which was for those who like something a bit "different"... but it
seemed to be all the wrong kinds of different. ;o)

I might buy just one stubbie of it though to try and to see if I still dislike
it so much. ;o) I should buy one Bud as well actually as I haven't had that
either for about a decade. Just to refresh the memory.

I mean if I want to be a man who knows his beer I should be familiar with
what people are drinking, even the beers I don't like. :o)

Cheers,
Kim.

I guess I'll have to buy a 442.

Just to fill you in, I also use a Hammerfall card with 3 RMEs for 24 ins and outs (used with Nuendo or SX). But I still use Paris all the time. Why? I use Paris for Vocal recordings and individual instruments and have done so for years - even after getting the Hammerfall/RME system. I just find it sounds better (warmer? hard to explain). All I wanted to do was get another EDS card before they're too hard to get, I'm sick of updating virtual tracks all the time.

Interestingly, my angle with clients lately, is that I use Paris because it's a warmer, earthier converter. They seem to agree, and really go for Paris as an almost "Retro" alternative. Believe it or not, it seems to be cool to use Paris (especially with young bands) because it's getting old and it's a bit rare. I've also started using my ASR-10 again! Clients think it's cool - go figure!

Chris.

Chris.Chris is in Sydney, a mate of mine, but I can't help as I no longer have Paris.

BTW, you should here some of the work Chris has achieved with Paris and 1 EDS card and an IF2.

Absolutely amazing.

BTW, deja vu. I think we did this last year.

Nice fridge.

Cheers,

-Jamie

Mmm, does ring a bell, but can't find it in a search.

> Nice fridge.

I'm pretty happy with that. I mate of mine "aquired" it for me after it was left behind at a trade show of some kind. It's one of my favourite things I own...

....aside from Paris of course, oh, and all my instruments. ;o)

Cheers,
Kim.

From that article, it seems that BT is really only into the technical side

of the production, and not actually recording and mixing anything.
Where does Paris come into it?

>Very nice fridge. Looks tasty.

Bourbon and beer here in the South.

I'm a Miller High Life Man. Hundred-year-old recipe. Light American pilsner,
but the thickest of the original bunch. Everybody else changed their recipe
several times over the century, but not the High Life, beatch. Tried and
true.

Can't beat it, you ask me. Tastes like crispy, caramelly water. With a buzz.

Sam Adams sux.

Everything else is up for discussion.

>No offense taken. We have a fair amount of watery mixturation
masquerading as beer, here.

For example steer clear of Budweiser. There's some kind of chemical preservative in it that has no business in a beer.

But the local microbrews are good. In Colorado we have Odell's, New Belgium Brewery, Breckenridge Brewery, a few others. Recommended.

Cheers,
-Jamie

Kim,
I'm not a Sam lover either but the two that pass the test
are Winter Lager and Cherry Wheat (if you like that fruity thing).
Brazilian Xingu is a black beer that is like eating a loaf of bread.

Hard to find and I think the recipe has changed for the worse=20
since the early 90s when I drank it more frequently. It makes=20
Guinness seem light.

Yeah, you really left a lot of room for that in the sentence below:

Huh, your bet? If you read my post you would see that I also record pop, rock etc. and that I actually praised Paris in these applications.

>None of us cares who leaves and who stays. I have clients coming
>here this morning who think Paris sounds fabulous. Now show me
>where your opinion should count in the whole equation?

Thats why you were all over the poor guy, Dave who switched to PT and praised his new system?

BTW. If you really are interested, I usually use one of the following setups
for recording choirs. All depending on time available for preparation etc.

Recording medium: SS32 with 896 I/O or RME Fireface800 and a laptop.

MicPre: Millenia Media HV3

X-Y or a Royer SF12 ribbon.

do very slight limiting/compression with a Crane Song STC8.

Regards

BabuParis 3 soft free? It's some kind of bullshit look:

a mixdown session tomorrow with a client and I really need the second card for the session.

So, my year long struggle to add a second working EDS card continues. First card was dud. Second one has finally arrived. Both cards work by themselves,

Booting paris (boots fine), and checking version info only shows one EDS.

PCI positions I can think of whilst the cables still reach (i.e. no more than one empty slot between them). Still no joy.

In the BIOS, the only options are to enable or disable Plug & Play O/S (determines whether the BIOS or the OS configures PCI) and for IRQs to be Available (to be used by PCI/PnP devices) or Reserves (specified IRQ is reserved for use

and sound card disabled.

In most PCI positions, only one ENSONIQ Scherzo was showing in device manager,

With the cards in slots 4 and 5 (irqs 16 and 18), Schezo shows two instances. However, when I try to boot paris I get Error 1/1 (whether the MEC is connected

My only other thought is that this could be caused by faulty 16 / 10 pin ribbon

2 x 16 pins cross in an X, but the red cable is to the left (rear of computer) when plugged in both plugs. 1 x 10 pin straight across, red cable to left in both sockets. Doubt that this is the problem though since why would this

I think it was Derek that mentioned that in some systems the connection needs

Many, many thanks in advance for any help.

Daniell put together this quick hack version to help ya out man.

woohoo. cards now recognised.
played around with more slots, reinstalled the scherzo driver several times,
made new cables... and eventually (3 hours later) got the desired result.

except that one of the eds cards emits a horrible crackling noise...

>Ok, finally got a second EDS card installed properly and working. After about 1 minute of working with it, I started getting a permanent crackle in one of the two card submixes. Even whilst playback was stopped. The crackle shows the submix faders. Any ideas?

I've tried reinstalling the driver (both using setup and device manager - the latter doesn't work at all, although having searched the newsgroup this was a suggested crackle solution).

I'm going to try removing effects and plugs ins to see if that makes any difference. In the meantime any advice greatly appreciated.

Could it be a bad second eds card?

Thanks,

DanOoops.

Just being an idiot.

SPDIF insert with the effect switched off was the problem.

So looking forward to finally playing with two cards after the 1 year wait of trying to get this to happen and the 8 year wait to upgrade to a second card!

uite passages. Wonderful
>for strings, ac guitars as well.

Absolutely and great folks at the company with comprehensive support.

I use a modded Jensen 990 Twin Servo that I just love. Detail to die for and as smooth as can be. Another place I like clean pres in pop is on drum overheads and pianos. I also have had great luck when a singer has a big voice, with the 990 and a good condensor mic. Otherwise, I like my Summit Tube mic pre for pop.

>Spaced omnis should be the most accurate with less phase issues, but they

Oh absolutely. Most of my work was done in nice concert halls so the clarity off-axis was a big plus. It also allowed me to get really close to the orchestra without getting too dry. Often I would be right over the conductor's head about 18 feet up (5.5m) and I always used the nosecones on the B&K's. I did a classical harp disc in a cathedral with spaced omni's about 4 feet (1.2m) from the strings. I took the harp's padded bag, and anything else I could find and put them on the floor around the harp to cut down on the reflection from the floor. I like the results.

You can compensate for omni's if you don't like the room by getting close, but they don't work everywhere. This is why we need so many mics! (this is what I tell my wife at least)

>I would love
>to have a pair of omnis as well.

Can't beat the Danes on this! (B&K) Not inexpensive of course and do get the nosecones.

>The Royers are wonderful on certain material, but you need A LOT of clean

>choirs. However, the uncolored mids and the incridibly smooth highs are
very
>hard to achieve with conventional condensers.

I think choirs, recorded well, are just glorious. One of my favorite
discs is Lauridsen's Lux Aeterna by the Los Angeles Master Chorale.
The music is so radiant I would have recorded it for free. (shhhh
don't tell anyone...) The guys who did it are very good.

<http://www.lamc.org/tickets/recordings.html>

DCKim,

I'm lucky to live in the microbrew capital of the world - Portland, Oregon.
I can walk down almost any street and find a great local ale.

However, I highly recommend the following brews, which are in fairly wide
distribution:

1. Lagunitas Maximus
2. Lagunitas IPA
3. Stone Brewing Ruination IPA
4. Hop Rod Rye

Let me know if you ever plan a visit to Portland and we'll go on one hell
of a great pub crawl!

-----=_NextPart_000_0212_01C663A0.A6B53B10--Hey Gang,
does anyone have the Paris EDS(multicard) cable layout format. I'm re-installing
, but get the 'Cards are not connected properly' blah blah blah....
ThanksLOL! :^)

Cheers,
-Jamie

>DimitriosBut the tracks are going to play back 10000 samples behind the waveform in the editor.....right? this is the problem with the UAD latency compensator. It's really hard to use real time fader automation when the audio plays so far behind the waveform, though maybe 200ms would work. I'd have to try it..

gDear John,

There is a free app called vstspy that reads all your vst'd and shows amoung other info the delay too...

<http://tobybear.phreque.com/files/vstspy.zip>

Enjoy

Regards,

Dimitrios

>Hey Guys

Greatly appreciated

Don't really like running Paris on XP after my last computer died, however there has been a nagging problem with my plug-ins causing a nasty pop at the beginning of each track where they are applied. I have been able to remedy this in the mix by placing a mute at the beginning of each track with a plug-in, but this did nothing to prevent pops when starting the mix anywhere midway. This has been a problem when working with clients present doing tweaks and overdubs.

The simple solution was to place a stereo Gate on the mix bus with a slow attack time. I have made this part of my start template. The only caveat is when switching card designations the bus gate goes away. No problem I have the template saved for easy reloading.

Hope this is helpful to someone.

Endless possibilities!

Of course, here in Texas we call it "Cabrito on a spit!"

Whole different thang.

;0)What bullshit! Or is that bull on a spit? Or is it spit on a stick? Or is it brainwashing on a pole?

Kim, the only way I learned how to play jazz was by listening to the cats
that I really dug and transcribed tons of solos. I practiced as many
arpeggios as I could find or create with my own musical sense,
