---=_linux493b36f8--Hi Jimmy,

I'm glad that it's working so well for you! I think the latest build (1.31) is safe, but if you've got work that just has to get done, stick with what's working.

Thanks again for testing out the code!

Mike

> Hey all. The forums may not be totally ready-to-go yet, but they could
be useful to generate email notifications of driver updates.

Here's how you can use it today:

1) Go to the forums and login (you'd need to register if you aren't already and make sure you're using a valid email address). The forums are at - <http://kerrygalloway.com/ParisForums/>

2) Once you're at the forum's main page, go into your user control panel (it's near the top of the page, just below the black header); once you're in there, click the "Account Settings" pane and make sure you've turned your preferred notification method on. Your options are "select notification by default" (make sure this is set to "yes") and

"choose notification method" (choose "email"). Naturally you can turn these off whenever you like.

3) Leave your user control panel and return to the forum's main page. Now click the forum marked "PARIS Projects" (but don't click on any topics inside it yet).

4) In the text above the topic listings on the left you should see the word "Subscribe". Click to "Subscribe" to the "PARIS Projects" forum.

Once you're subscribed, you should receive immediate email notifications of additions to the "PARIS Projects" forum, which is where Mike will be posting the driver updates. As an alternative to step 5, once you get to step 4 you'll find there are also links at the bottom right of the "PARIS Projects" forum page for RSS or syndication.

Hope this helps!

- KHi Tom,

I'm really not sure in the new driver would be ideal on a single core system.

If there was a problem, like ADAT cards not working, it might be worth a try. The original is more efficient on a single core machine because it isn't protecting its variables.

On the other had, the new Scherzo is compiled with a more modern version of the driver DDK, and it puts the second half of interrupt handling at the front of the list of DPCs to be processed. So, it could still work better with the ASIO that I'm about to start on.

I guess if everything is working fine on a single core machine, don't fix what isn't broken. But, there aren't going to be any new single core machines, which is why I felt this driver was so important.

I'm just stoked that I can use PARIS on my quad core. :) Thirteen years ago, I worked six days a week all summer at Jenny Craig to make enough money to buy a Session 8. Then, Digidesign screwed me by not updating the driver properly for Windows 95. Well, not this time. :)

All the best,

Mike

>I thought it was some new Wii, the WTB 8. heheHi Jim,

I've got my rig in the for sale group including 2 x 8 in cards (selling seperately).

Unfortunately I'm in the uk, which means if you want it in time for christmas, UPS or similar is the only way to go (air mail will never reach you at this time of year!) and that's pretty expensive (\$75+? for shipping)

let me know if you're interested though, I can check the figures more thoroughly

thanks

Kerr

>That's one that bit us in the butt far too many times on PARIS 3.0 (Mac OS9). Caveat: I'm going from memory here, but if I recall, we started getting rigorous about filenames. Audio file names in PARIS start creeping up in length as PARIS' editing functions write things like (if I recall) RENDERED or BOUNCED at the end of them.

At a certain point, PARIS's file system can no longer deal with the consequences of its own verbosity - now-illegal filenames. The PARIS internal track playlist is a bit of a kludge - instead of throwing up an error, it makes an inelegant "executive decision" and individual segments with now-illegal names simply get skipped and the track's overall "playlist" shortened by their length.

Once again, a caveat - my memory might be playing tricks on me here. But you might want to keep your eyes open for that possibility if you've, say, snipped and edited individual segments and the segment has inherited a new name. Quick check - select all the objects in the track and scroll through the audio bin looking for any selected files that have suspiciously long names, and rename them (if you don't want to rename them, copy or render them in place and rename the copy with something shorter). Then try a re-render and see if that affects the timing of the rendered track.

get a Grace 101 out of the deal, at the very least!

Let's talk about the Google adwords campaign - I'll be starting a similar
push when the forums debut and with some brainstorming we can find a way to
get maximum exposure (and thus more of our far-flung brethren and sistren
back in the fold).

>It may be. Thanks Neil. Whenever I hear the new Coldplay cd it surprises
me
>just how many of the songs are instantly recognizable and leave me wondering
>where I heard them before.

Well, Coldplay even admitted that their last hit (I can't remember the name of it, sorry) evolved as a result of them trying to cover Kate Bush's song "Cloudbusting" (or was it "Running Up that Hill"??? Can't recall what they said), and not being able to do it properly, so they just ended up taking the closest version they could get and turning it into a song of their own.

So, maybe they're notorious for this, and THAT's why their new songs sound so familiar... maybe they're all songs you've already heard, just re-worked.

;)Without having any inside information at all in the old problems between Creative-Emu-Ensoniq-ID, when seeing the "new" Creative-owner on the hardware side, that got all their succes from the consume marked, seeing that Emu is following up that consume idea, it seems Creative had/have the right idea for making money when thinking consume. So, for me it's understandable if the people at ID said enough was enough and closed their software-door. But since they were in near contact with us here, they also got all the shit from us. The real sinner, in my eyes, was the new owner, Creative, that needed new technology for their consume-politics and bought two small pro firms with moneyproblems to get it and then killed what they didn't need. But for me it's all a dead history now, but still with rumours ducking up, since Paris still is one of the best music-recording systems ever built. But, as you're saying Chuck, a real Paris Asio driver, to get old Paris more perfect, is still missing. The patchbay could be better too for many, but for me, it have worked as it is. When looking at the Sharc and Motorola processors, used by firms like Creamware, UAD2 and TC, maybe there can be a more modern way to go for a real new Paris system, if someone can use that idea???

....Just something to think about in these wishtimes before a new Christmas...
