Dave,

I'm currently using a Furman HDS-16 system with 5 x HRM-16 remote mixers. Each HRM 16 mixer has an outboard reverb unit so the talent can control their own levels. This is a very capable cue system when used with RME totalmix but I often find that the client will get frustrated and a bit put off when offered the ability to create their own headphone mix. As cool as the concept is, I usually have to go out and plug a second set of cans into their HRM-16 and dial in their mix for them while they're playing until they give me the green light. They don't want to be the engineer and that's understandable. I could do this for them faster and with a better result using an analog mixer and my high-end hardware reverbs when all is said and done.

Also, there are some things about

I know when I first tried to run the plugs, I got an error and all I had to  
do was include the plugin directory on the system's path to get it working.  
Try that and see if it works

I thought teachers were all perfect. I don't know if I can handle this, but I want to know.

Maybe we can blame it on a math teacher?

;o)
