If you hold a funnel in your hand, and you try to use a pressure washer to force 100 gallons a minute through that funnel, not only will the funnel not be able to accomodate that flow, but you will also get wet in the process. If, however, you adjust the water flow so that it is at slightly less than the capacity of the funnel, not only will you not get wet, but everything will flow smoothly, and the stream emanating from the end of the funnel will be a thing of beauty...

....grasshopper.

Think zen when mixing in Cubase.
