hat I did! Works just fine!

Cheers,

Kris

250\$ shipped anywhere.
Great working condition

,almost has never been used.

Paypal.

REgards,

DimitriosThis card syncs to paris in XP ok, right? I've been thinking about moving my UAD out of the box and into a native machine and going full on nuttin but paris in the other box.

You see any pitfalls in that scenario?

I choose Polesoft Lockspam to fight spam, and you?
<http://www.polesoft.com/refer.html>Hey Kriss and DJ,
you are right we didn't think about that !!
I have already several 110V machinery here with small 110/220V adapter trannys.
They are cheap.
R880 is 58W machine so no problem using one that is sold for irons and similar
stuff.
DJ ,same applies for the M5 !!
I think these use outboard power supply which must be 110V, right ?
Regards,
Dimitrios
