Dimitrios,
I own Faderworks and will commend the man
who is responsible for this upgrade path!

A very nice development indeed!
Tom
"Dimitrios" <musurgio@otenet.gr> wrote in message =
news:47b9b0e5\$1@linux...

DJ and other Paris users,
After contacting again Faderworks author about PDC although he did not =

refuse
to work on a REAL PDC plugin program for Paris !! he is not sure if =
enough
people would buy that !
Instead he promised to update faderworks with this brilliant idea !!!
There will be an extra latency page where we will be ble to put every =
plugin
with its name and latency (typed from the bginning) meaning that you =
will
have to do thia once and type for all your vst/dx and eds plugins =
their latencies
(VSTSPY can detect vst latencies for you !) and have a ON/OFF button =
on each
of them.
So verytime you put a plugin, for instance UAD1 nigel then you just =
push
the ON button and every other Paris audio track will align with Nigel =
!!!
Isn't that wonderful ?
Hey DJ jump back on Paris with us...
We need your input !
Please support the Faderworks plugin and you that you have no bought =
this
please do so as this is them most important VST plugin ever for all us =
Paris
users.
It does not only have this latency compensation we all were hoping for =
but
it is a 32 group maker for Paris !!! with mute, volume and panning =
whole
groups across submixes !!!
If you happen to buy Faderworks as to show our gratitute that this =
author
is paying attention to our needs when NO OTHER daw user would benefit =
anymore
then this is the least we can do to show our appreciattion !!
Thank for reading
Dimitrios

ot 0.03ms ?Black and white thinking would be:

-Microsoft is horrible and Apple is perfect.

Nobody is saying that, either. Not even James.

Or:

-Microsoft is horrible and Apple is equally horrible.

A few people seem to be saying that. But that sounds like a rationalization to gloss over Microsoft's repeated bad behavior.

IMO, Microsoft has done some thing right, some things wrong, but have demonstrated a pervasive lack of respect for business ethics (yes, there is such a thing :^) and a lack of respect for the law which the record shows has crossed over the line into criminal behavior. They did, after all lose a criminal court case over the Netscape thing, and they also ended up paying some millions to Be for Microsoft's illegal market interference that drove BeOS out of the market, (a real loss for media producers BTW). Microsoft's shenanigans are legendary and haven't stopped.

OTOH, Apple has pulled some boneheaded moves along the way. The example with hardware OEMs being one. And their treatment of Be being another.

Also the years wasted trying to get past OS9 before finally bringing in NeXT. However, AFAIK, Apple did not do anything criminal in those cases.

Both companies flirted with ethical impropriety with stock options, and both have changed their policies there. Apple perhaps worse on that one, I think several people left Apple in a legal cloud over that issue.

Whereas I don't think anyone left Microsoft over responsibility for any of their criminal transgressions. AFAIK, at Microsoft no one has taken responsibility, ever, for anything. Microsoft just seems to pay the fines as a cost of doing business while aggressively manipulating the system to reduce the consequences for their questionable actions.

On the plus side, Microsoft has contributed to making the computer business into a commodity business with downward price pressures. This is beneficial, to a point, but the "Microsoft tax" also adds to the cost, sometimes even for those using, say, Linux. And currently Microsoft is pushing their user base to adopt a new OS that is less robust than their previous version and apparently a step backwards for media producers.

On the plus side, Apple has built a business that pays attention to media producers, from the production side through the distribution side, and for that they deserve some amount of credit from folks like us. And on some of their pro products, hardware and software, the pricing is actually a better deal than other options. OTOH, for some products it's not a better deal, and sometimes Apple's increasing consumer orientation seems a distraction from the pro side.

From my experience, I've had personal responses from Apple which demonstrate that they are generally focused on getting things right with their media production products. While they do rush out buggy software

sometimes, they have improved their products immensely over the years that I've been using them. They do listen to users and some of their products have earned their reputation as industry standards for media production.

Overall, it would be far too simplistic to say that one of these companies is just as bad as another. In my view, between the two, Microsoft clearly takes the "prize" for unethical behavior. While at the same time Apple is not perfect.

But if that's too "nuanced" then yeah, they both suck. ;^)

Cheers,
-Jamie

chrisl@adkproaudio.comFor the record, it was what Apple did to the cloners that drove me into the

ever welcoming arms of Redmond. I couldn't afford Apple hardware, but I could afford a Power 603e machine that was my first experience with computer audio. Less than a year after that Apple shut down the cloners and I realized, 'Hey, these are greedy corporate bastards just like Microsoft. And Windows hardware is cheap and I can build my own.' Which lead me to a 400 Mhz Celeron + Paris,

and the rest is (grim, money losing, book publishing) history.

Your story is one version. Another is that Power was a smart, talented, agile hardware vendor who was beating the daylights out of Apple because they were everything Apple had long since ceased to be--entrepreneurial and customer oriented.

are no where near close
>to MS on being evil and unscrupulous. Not the same!

Dude, I would tend to agree that M\$ are a little worse. My opinion is that
part of the reason for this is that they simply have more power, but that's
my opinion and I don't expect you to share it.

What I do expect you to share is the basic idea that NEITHER of them are
perfect and NEITHER of them are COMPLETELY evil. They are both a mix. Sometimes
they see a competitor and use their power to club them over the head to the
detriment of all of us. Both of them do it. One has more ability to do it
than the other.

But really... whatever. ;o)

Cheers,
Kim.HI Lamont,
All that and still the worst support and worst warranty in the business.

What's that... they give you a "waiver warranty"?

(meaning, the warranty's good for as long as you can see the
salesman waving in your rear-view mirror as you're driving
away from the store).

:)"jim drago" <jamesd@prospect.k12.or.us> wrote:

Ah... so John nailed the problem!

>I am putting the old risers back in but wouldn't you know I'm 2 short.

>Well not me but the number of risers I have, so I have to wait to finish

>until I can get to town and get 2 more risers.

You don't want to just get a crazy straw & cut a couple pieces
to length & stick a couple screws through there? lol

NeilWow! After a long, long time, I finally got my 2nd CD finished and made.

It was recorded entirely in Paris, and mastered entirely in Paris by our own Sakis. It is called, "Images of Movements thru Time and Space."

It is a bit difficult to categorize, as it has roots in jazz due to the improvisation involved, yet it also has classical and avant garde roots.

There is more information about the CD, along with some mp3 samples on my site at www.enchantedvibrations.net

I even got Gene Lennon involved in checking out my mixes early on. I have some GREAT players joining me, including guitarist Michael Gregory. Check it out.

Lou Guarino Or this warranty: If it breaks in half, you get both halves!

;^)

But since my 828MkII has been very dependable; and since MOTU has been timely with OSX driver updates when needed; and since the new 828MkIII feature set looks tempting; I think the 828MkIII is worth considering.

Cheers,
-Jamie

can't prove it - yet) is that Apple gave Apogee lower level access to core audio that isn't in the SDK, thereby giving the Apogee/Logic combo a significant edge over Digital Performer, Nuendo/Cubase, RME, MOTU, Digidesign, etc.

7) Apple drops the price of Logic to \$500, with additional software/etc thrown in (imho, this is below average market value for a DAW software and most likely a loss leader).

8) Why? To sell Macs and Apogee interfaces. Logic is priced too low to be a profit center - it's just a marketing tool now to expand the Mac's position in consumer, prosumer, hobby, and beginner, lower end musician markets, to the detriment of other 3rd party companies also developing for the platform.

In both cases, Apple is using applications to push their hardware, even though there are competing applications, and the Microsoft argument would suggest that using applications and exclusivity of them, and hardware, is a conflict of interest for an operating system developer, much less a computer builder.

Just my .02 - can't prove it any more than anyone can *prove* Microsoft is evil. I don't like MS, but Apple isn't making friends in my end of the pro audio world - just putting this in perspective. Btw, I'm not the only one with this supposition - there are some other well respected audio people in agreement.

Btw - didn't post this to get deeper into an argument - just since you asked for an example, and I had read the same supposition of Apple's move with core audio from another Nuendo user just today, so might as well pass it on here.

I don't hate Apple - but I do hate exclusive deals, and lock outs that do nothing but hurt the consumer by limiting options. I have yet to verify that core audio really is faster with Apogee interfaces, so take that with a grain of salt - Apogee claims they are, of course. Point is, if to get the most out of your Mac for audio, you not only have to buy an Apogee interface (an Apple partner), but Logic as well, and don't have the option of running a MOTU interface, RME, Lynx, M-Audio, etc with any other software, you are sacrificing options.

Sounds like a text book Digidesign move to me, but it's Apple doing the price cuts and exclusive deals to undercut the market and sell more Macs and other Apple-partner products. If there were no Mac support from other companies (MOTU, RME, Lynx, etc), you could call it "their product, their market", but we are comparing operating systems and computers here, so that doesn't stand. It may not be illegal (but I believe it is close), but it is

hurting consumers.

We'll just have to disagree about it I guess. I still like ya and I =
think you're a cool dude, just a bit misguided :) I find nothing ethical =
in the things I've posted about so far and you could post the same kind =
of things about MS and we'd see that together. But not the mighty blue =
apple? Added to that the Jobs li(n)e by li(n)e <-bad pun #1> that was =
pushed on the public (*).=20

It ain't like I'm saying MS is ethical - they're not, either - but the =
only thing keeping Apple from being the same ugly foul hairy beast is =
financial firepower. Gates lies about how great Vista is. It's a turd. =
Jobs lied about how great Motorola chips were. They were turds. Gates =
forces you as a business to buy office/OS's through each planned =
obsolescence upgrade. Jobs tells you to think you're safe from virii as =
an ad campaign and tells you how Mac runs office 'just as well as a PC'. =
but fails to mention it's OLD version of office, years old in fact. =
There are 60 known virii in the wild for Mac, but you won't hear about =
that from Jobs/Apple. =20

Apple Ads, speaking of....PC's are cold and harsh and only good at =
office apps, 'eh? Somebody should tell that to all the video and audio =
guys that make wonderful art every single day on a windows PC, because =
they didn't get the memo. I will say that iLife and GarageBand are =
pretty cool, though not pro of course. I have 2 macs at my avail at =
work, and several PC's. Frankly, they both tick me off from time to time =
but the Win boxes see more use and tick me off a whole lot less. Nothing =
like plugging in a KVM and having your Mac reach an unrecoverable error =
and forced shutdown because it doesn't like the KVM. Every time. But not =
being the latest OS I can't get support for it w/o buying some more =
"apple care", and Belkin had no idea what would cause it, nor my vendor. =
I had been considering a Mini for personal use (with boot camp of =
course), but that kinda gotcha rather cinched the "think I'll pass for =
now" for me. MacOS-x 10.29 on dual procs, and it's a foot prop under my =
desk now. At least it doesn't crash that way and it's more ergonomic for =
my peds, heh... I get a warm fuzzy and smirk when my feet hit it :>

(*) Apple is so much faster, Apple is so much more interesting, Apple is =
so much better at.... er, hey, it's the new and improved Apple now =
with INTEL hardware (IE, that's called a PC Steve-O, and no amount of =

backpeddling will cover the fact that you were lying through your teeth =
about how much faster Motorola's I'd-rather-be-in-a-cell-phone chips =
were over INTEL) and it's so much better than , uh.. running windows =
(can't say PC anymore at this point)! Er, wait.. now you can run Windows =
on your Apple! (which I don't have a problem with, in fact I applaud =
that one but don't you think that's rather odd for Apple to say bad =
windows, bad windows.. hey, you can now run windows?) I also give major =
points to that dually quicksilver being WAY cleanly designed inside. =
Superb visual build inside the box. Too bad it's an ergonomic foot =
device now.=20

You talked about MS stealing the macOS software GUI. Ok, where did Apple =
get their code base from for OS-X? Can't see the worm in both apples, =
'eh? <-yes, that was bad pun #2.... but I am a punny guy!>

They screwed you as a clone seller even and still you deny. Horse, =
water, no drinky. You're probably thinking the same thing about the =
majority here. In all seriousness, I'm glad you have enjoyed your =
relationships with Mac, I cannot report the same, unfortunately. I =
absolutely adore my iPOD though, and although iPhone is tre' cool, it's =
not cutting it with me on the tech end so it's off the list of 'to buy'. =
I also thought that the Cinema Display was about the most beautiful =
display ever as far back as 4~5 years ago. on the overall though, I =
didn't like Apple computer kool-aid any better than MS's kool-aid.

You're ok in my book man, so don't take any of this all personal or =
anything, it's really not meant that way. I haven't forgotten when I had =
a problem with a Mac you are the first and only dude offered and =
followed through to help me out. Some day I'll get a chance to repay in =
kind.

> <http://www.youtube.com/watch?v=Mh0VX74alwkA> lot of this is speculation, not fact. I will say
over the years many companies
dropped support for the Mac platform, one example was when Parsons dropped
Quick Books for Mac, luckily we got that one back. Mac users have had to
deal with this for years.

Why should Apple develop for another platform when it does not benefit them?

They are trying to grow the Mac market not the PC market! I'll remind you that they offered PC users special pricing, including on hardware. PC users were not left out in the cold. If you haven't noticed, Apple unlike MS, sells integrated hardware and software, they have a different business model.

Yes, they use Hardware and software to push each other.

By the way, if you haven't heard, anti trust cases were brought against Microsoft, these cases were adjudicated and Microsoft was found guilty. Thanks to Bush and friends, MS has gotten a slap on the wrist instead of a break up. MS is back to their old tricks.

I can cop that so long as you're willing to cop that it's ok, for example,
for M\$ to do the same with, say Office, just for example.

Would that be OK?

Cheers,
Kim.It's About Time!!

If you buy into it. Or you could use Open Office, which is what I do (the NeoOffice version on OSX).

> Jobs tells you to think you're safe from virii as
> an ad campaign and tells you how Mac runs office 'just as well as a PC'.

Sometimes the Mac version of Office has been ahead, sometimes the MSWindows version. Doesn't matter to me because I'm not on that treadmill.

> There are 60 known virii in the wild for Mac, but you won't hear about

Ooh. 60. Wow. That's what, 1/1000th the amount on MSWindows? ;^)

Haven't seen any here.

> Apple Ads, speaking of....PC's are cold and harsh and only good at

Yep, GarageBand is cool being for free with the machine, but far short of Logic.

> I have 2 macs at my avail at
> work, and several PC's. Frankly, they both tick me off from time to time
> but the Win boxes see more use and tick me off a whole lot less.

From what you said below, it sounds like your Macs are pretty old and not nearly up to date. OSX 10.29? Get 10.3 at least. I'm on 10.4, it's pretty solid. 10.5 is sitting here, waiting to be installed when the decks clear enough to get around to it.

I'll be happy to store it for you. Could probably put it to good use.
The quicksilvers were pretty loud, though. The G5 is much, much quieter,
and the current Intel boxes are also pretty quiet.

> *(*)* Apple is so much faster, Apple is so much more interesting, Apple
> is so much better at.... er,

Those whacky marketing types...

> hey, it's the new and improved Apple
> now with INTEL hardware (IE, that's called a PC Steve-O, and no amount
> of backpeddling will cover the fact that you were lying through your
> teeth about how much faster Motorola's I'd-rather-be-in-a-cell-phone

> chips were over INTEL)

For its time the G4 didn't suck. The G5 is still a mighty chip around here. Keep in mind that the current core 2 duo stuff was not out when Jobs announced the switch. He switched for the then upcoming processor road map, which was more attractive from Intel at the time than from IBM. Turned out to be an OK choice I think, although I have yet to get one of the Intel Macs.

> and it's so much better than , uh.. running
> windows (can't say PC anymore at this point)!

I think you could always say PC. "Personal computer" fits any of these boxes.

> Er, wait.. now you can run

> bad windows, bad windows.. hey, you can now run windows?)

Since many people are stuck with using MSWindows for specific software, company policy, etc., it's not so odd for Apple to market to them. Shocking, maybe. Clever, actually.

> foot device now.

Having had both, the G5s are even nicer - with pretty much the same external case as for the octocore Intel Macs today, although the new versions have four HD slots and support up to 32GB RAM.

> You talked about MS stealing the macOS software GUI. Ok, where did Apple
> get their code base from for OS-X? Can't see the worm in both apples,
> 'eh? <-yes, that was bad pun #2.... but I am a punny guy!>

The code base for OSX was derived largely from NeXT, the company Steve Jobs started after been booted out of Apple. I used to work for a NeXT developer doing documentation and testing. Had a cool NeXT cube. Good times!

I haven't fallen for iPods or iPhones. Yet anyway.

> I also thought that the Cinema Display was about the most beautiful

Having spent some time working in development environments on multiple platforms (not just Apple and Microsoft), I think both of those flavors of koolaid taste odd. But overall, for the reasons I spelled out in my other post, Microsoft's koolaid is worse. Apple has actually gotten better than they were in the 80s/90s, IMO. I was not a fan of OS9 and before.

Cheers,

fire sale for a product that was not going to get more development. Key
features from Shake have already made their way into Motion.

When Apple bought Logic, they were struggling to get audio apps moved
over to the then new operating system, OSX. This was a big transition
period for Apple, a risky period and a critical time to build critical mass.

Had they not bought Logic it may have taken much longer to get decent
audio apps onto OSX because on the one hand, Mac developers and users
were still clinging to OS9. On the other hand, audio development was
starting to pick up on MSWindows. Maybe it was a smart move on Apple's
part to get the ball rolling.

After the more recent price drop for Logic Studio, it still costs more
than Digital Performer, although I agree that the bundled synths make
Logic a very good deal right now, and I can see how some companies may
be threatened by that.

BTW, I use Logic with a MOTU interface. No one is forcing me to buy the
Apogee.
