Hi All,

This is still a debug edition, but I have removed a lot of the debug code
and tightened up the timeouts so that it loads quicker and uses a lot less
CPU while running.

I would be very grateful to anyone who tries this out on any PC. I haven't managed to make PARIS run on a multi-CPU machine reliably, but I cleaned up a lot of code, and this edition runs on my Phenom 9350 as long as the intaffnity and toms hardware utilities are used to force the driver and the app to cpu 4. The original XP release did not work on my Phenom no matter what, so this is still a very important update for me. :)

I'm going to shift gears to the Mac plugs as soon as I can get the rest of the debug code out. Please let me know if you have any trouble before then.:)

Cheers!

Mike
