That's correct. I use a virtuavia 4 slot Pci -> Pcie expansion chassis.

Virtuavia Pcie host card in the mac pro, 4 eds cards in the chassis.

Cheers,

TC

http://steinberg.net/

http://www.sonicstate.com/news/shows.cfm?show=wnamm09That's the one.. I put it in a rackmount ATX case with a beefy power
supply and a speed switchable fan. It runs very quiet.

Cheers,

TC

I got the version Micha referenced above and put it in an atx case with
a 500W power supply.

I wouldn't have trusted that other little box that they have. Best thing
is to just get the host card/board and use your own case/psu.

Cheers,

TC

>Hi Aaron,

Thanks for your interest. I wish I had better news.

I have a serious asio problem. Creamware and Cubase 4.0
were installed but glitchy. The problem is somewhere
with hardware fighting for resources. I removed everything
except 5 EDS cards and still there were some glitches.
Ethernet was disabled and there are no other USB devices.
Paris runs like a champ through it all but asio is nothing
but a train wreck. I have lost the will to go any further.
This is week five of tweaking.

Paris runs great with a UAD2 and UAD1 internal latency and all.
That makes for a smoking mix engine. I still have a fairly robust
dualcore that had been fine with Cubase 2.1 . I will go back to
that and run with it until I truly outgrow it. I will install Cubase 4.5.2
though.

Chris suggested running the Creamware card on a single core
but this problem is deeper than that. Maybe it's the Magma
and PCI bus? I've spent more money than I wanted to to begin with.

Tom

Mackie, we didn't have any new products this time around, because our new
stuff didn't make it out of the Chinese factory and on the boat in time for
the show, but we have this dandy press release! Don't worry, we probably
have a price increase announcement before the end of the show or something.
 We figured we'd rest on out laurels and ride on our name for the rest of
the show, and make a big deal out of being in business for 20 years.

>OMG, has anyone seen this technology? Melodyne has been around for a long
time but the capabilities of these newer programs is just simply astounding.
Does anyone know if Melodyne cre8 or the Melodyne plugin is functional in
Paris. It uses VST, AU, RTAS, DXi (via MelodyneBridge), whatever that is and
ReWire. Has anyone ever used this stuff? It also imports and uses these file
formats: WAV, AIFF, SD2,
mono and stereo. This is truly amazing stuff.

http://www.celemony.com/cms/index.php?id=news&L=0

Thanks,
RichKerry, I think I'm just going to purchase a few of these from Auralex, they
seem reasonable and look pretty neat. There's a weath of products from this

company, some of it pretty expensive though. What do you think?
