

songs in Cubase SX right now. The thing that seems to be happening is that it's not finding the plugins on the server.

I told the developer I'd do some beta testing for him using my 4 x UAD-1 cards. I've got an email to him in the pipeline but he hasn't answered.

Genuine, warm vintage tape echo. Loved it.

Now, had my brain kicked completely in before about 3/4 of the way through the show, I would have patched the output of the damn thing into a couple spare tracks in Paris so I had the actual verb to mix in....

Yes, I was slapping myself in the head. a lot.

Oh, well.

Next week: Jim Peterik. Will be a full house, rockin' into the night...

pabYour right about The RNC! Well, some of these boxes just do the balancing trick, and some do the conversion up or down.

James

>One other item, is, if your server vst folder is in the program files folder path, make sure you have access to it thru this path over the network. I noticed when I set my network up that Program Files was not automatically shared just because my C drive was shared. So I had to drag it into the shared files folder and make my shared connection through this path. Of course, you can try putting the vst folder in the shared files folder instead. Anyway, make sure you can access the vst folder on the server from the host thru the network - so it can be found on the host scan. Gotta go, hub yelling at me.

I choose Polesoft Lockspam to fight spam, and you?

<http://www.polesoft.com/refer.html> I bought Paris eight years ago to afford processing power. At that time I

just couldn't afford fine analog gear. Now I can. I can attest that when one patches processors through the inserts and "throws the coals" to Paris submasters and two-bus, audio expands greatly.

If a track needs processing in part or beyond Paris capabilities, I fly it through a lan to Adobe Audition 1.0 which opens paf files, work it and fly it back to Paris for mixing.

Still use an Athlon 750 with a Tankersly suggested Miro Star 6167mb. 128 meg o ram. Never crashes, even working 6 hour tracking sessions.

Clients love our studio's signature sound.....sounds like 2 inch. And that is the goal..

The only future upgrade would probably be SX or Pro Tools run through a Neotek, but research suggests mixing ITB with other than Paris math is not an option.

>I'm finding that when I wrap a VST into a DX using the SpinAudio wrapper that
those tracks render blank. They play fine using the wrapped VST though.
Any ideas?

JohnYou load a million DX and VSTs and open up wavelab in XP. 130MB total, You
do the same in Paris 3 and it goes to 600MB. Remove the VSTs and it's down
to 330mb. Paris apparently loads every VST into memory where other apps
don't.

I also found that if you wrap the vsts to DX's they don't render. Not to
mention that if you run Lexicon Pantheon stereo verb in mono it crashes paris.

Any ideas of a wrapper that will actually render. DXs work great in Paris but VSTs are memory hogs. I'll up to 1.2gb ram but I'd rather another way.

Thanks,
JOhnFXpansion wrapper here...no problems with rendering.

Ivory seems to run better on Receptor than on Mac or PC. The achilles heal of Receptor has been streaming large piano libraries from disc at playable latency using Native Instruments Kontakt. Ivory just plain rocks on the thing. Other non sample based softsynths have always run like a champ on it.

My main application for it is live performance. I run the Scarbee Rhodes/Wurly, Native Instruments B4, MTron, and assorted other stuff on it. I have yet to fire up "Uniwire" (A VST plugin that calls to Receptor over ethernet) and integrate it as an effects processor into my studio, so I can't comment too much about that side of things. One of these days I'll switch to XP for Paris and get that going.

>Steve,

I'll post up some MP3's of the session later today or tomorrow. These are
just piano/vocal cover tunes for a client who is cutting a demo for lounge
singing gigs.

The secret to Ivory is getting a good controller, dialing in the proper
velocity curve in the application (very easy to do) and having a computer
that can handle streaming all of the voices (over 160) and will allow the
notes to decay normally. I'm using a dualcore AMD 4200 with 4G RA and it
handles this task with ease. There are *lots* of presets in the application
which are based on different EQ, ambience, chorusing, etc. I turn all that
off and just use the dry piano samples. It's scary realistic.

>I looked up when I bought my Paris unit 11/16/98.

I still have the original mime advertisement, it's pretty funny.

Paris has been great for me but it's time I moved on.

It's been years since I was active on this forum but I still want to thank everyone, audio wise I owe I lot to this forum and Paris and I wanted to say thanks.

so THANKS TO ALL.

I will list my Paris stuff for sale.

JackAnyone have any experience with Japan's voltage and their electronics? I understand that the Japan voltage is 100 volts, unlike our 110/120 volts.

In most of my equipment, it seems to have automatic switching (100-240).

Anyone with experience of using your Paris and other audio hardware over there?

I am looking to go there within the next few months and I am trying to figure out if I need some kind of converter. And if there are any issues. I have some rather expensive equipment I'd rather not get ruined because of that.

When I inquire with the locals over there... they usually reply that they use a converter, but no other details are known... plus, they are proly referring to stereo's and not pro equipment. Anyone? If I can ask what analog gear are you patching in and how/where/why etc?

What plugs are you still using and in what situations? I always thought it was a pain to patch the external gear in unless you have something that made a big enough difference... but maybe I'm doing things wrong. thanks for the knowledge.

>Hi Neil,

That was probably my post you were referring to re: the Line6 Toneport UX2.

Well, I'm happy to say that I spent quite a bit of time on Saturday with it and am extremely happy with the product. I'll also admit that I was a

VERY early adopter of POD and my live rig is a PODxt through an Atomic Reactor 18-watt tube amplifier.

The TP UX2 is a great deal for the money. At \$199 you're really getting a lot for your money. Only downside is that it requires a fairly fast host computer (PC or Mac) as, unlike the POD family, the Toneport relies on the computer's CPU for all of it's processing. From what I can tell, the TP is simply a box with some I/O ports, A/D & D/A, a couple of meters and knobs. I ran my guitars straight into the UX2 and out of the S/PDIF connection into a MEC and the sound coming out of my Mackie 824s and Sony 7506s was awesome.

There are also a number (4) of tone packs that you can purchase from Line6 that add amp, speaker, and effects emulations. I'll probably buy them this week as a friend who's running a PODxt Live has them and says they're awesome. (Even though he's a dyed-in-the-wool PT guy I still trust him!).

I haven't tried the mic preamp or LA2A emulations yet. Hopefully, I'll find some time this week to check those out.

Please contact me if you have any questions.

Hope this helps!

Mark

outboard hardware instead of plugins. What's the feeling on this idea
lately.Is there such a thing? I know Opcode went bust but has anyone written a
driver for the Sonic Port?

Thanks,
RichJust when you're all thinking "Come on, this is getting silly..."

It does seem to be the first suspect, the UPS.

This morning I awoke and it was down, and I did my usual, unplugged it and

plugged it back in... whirrrrrrr... silence. Tried again, unplugging it a little longer... whirrrrrr... silence. Hmm. One more try... same.

Unplugged it from the UPS and plugged into the actual mains, and boing, up she came.

So we're running on straight mains at the moment. Time to start looking at UPS pricing. I'll still get that spare processor anyhow as it's dirt cheap and the fan is definately not happy, but I don't think that's what's causing the outages currently.

Hopefully, now that the UPS is out of the circuit, we may see some more reliable service for a bit. ;o)

Cheers,
Kim.<http://dynatube.creamware.com/> exelent

Hey Jack

out of curiosity what are you moving to?

DonMy feeling is that both plugins and hardware have their place.

If noise is more important than sound quality, plugins are the way to go.
For music, outboard rules.

Just my 2 cents.

Mike

"Sanbar" <sanbar@wi.rr.com> wrote:

>I've read some posts here and in other newsgroups about people using only

>Not so much a rant to bitch about the situation, but more
something to provide you guys with some entertainment through
someone else's misery (can't let DeeJ have exclusive rights to
THAT territory, now can I? LOL)!

So, a couple of weeks ago, I'm vacuuming the pool (which I've only done a few times all winter), getting it ready to start using again, because we live in the desert & soon it'll be swimming weather and I notice that the filter pump is leaking a bit - I decide to pull it apart & see if it's a gasket or something I can fix - turns out to appear to be coming from the impeller seal, oh well, I don't have the tools for that, so I put it back together & call a pool service company - they come out a couple days later & say tha's indeed what it is, and they can order a couple parts & fix it the next weekend... cool. "Oh, and by the way, I notice that this 3-way valve that sends the water up to the solar heating panels is cracking on the outside... can you guys replace that at the same time?" "Sure, but you'll also need to replace these two check valves when you do that" "Ummm... ok, can you get me a quote?" Guy calls back later with a quote... a few hundred for the whole thing... a bit more than I was prepared for, but not really out of line, so I say "Do it!" Nice folks - don't make me pay when they fix it, they send me a bill & when I receive it I send them out a check this past Monday morning.

Monday night - last night - my daughter goes into the spare bedroom, which is her "office" (which she doesn't use much - she does all her school assignments on her laptop in her room or the living room & then prints them out as needed... some of them she uploads online in fact, and her professors access them & grade them there, and she gets her grades via e-mails - pretty slick, huh? Anyway, that's neither here nor there.), and she calls out: "Dad, there's water on the floor in this room!" Fuck... roof leak? It hasn't been raining, what the hell could it be, then I realize that the water heater closet is on the wall opposite that room... open it up, sure enough, leaking from the bottom of the water heater. It's gas (not electric),

so I don't want to fuck with it... call the plumber, pay the "emergency call premium", and have him shut off the water & the gas... I drain it with a hose out the front door & call my insurance company to see if I'm covered. Turns out I'm covered for the damage the water caused, but not the plumbing itself, which I guess makes sense. Now here's the kicker... plumber tells me that new codes require a certain type of pressure valve to be installed any time they do maintenance, or repair/replace a water heater. I tell him "Wait, I just had that done last year, when you guys replaced this old gas inlet valve that quit working... it's this pressure relief valve right here, and it cost me an extra 200 bucks or so at the time." "Yes, sir that was a new CITY code implemented a couple years ago, this is a new STATE code that they just implemented this year... and it supercedes all city & municipal codes!"

"Fuck"

"Indeed"

(OK, he didn't say "Indeed", but it would've been appropriate if he did) :)

Anyway, so here's the worst part... in order to do this new kind of relief valve, they have to do one of two things - run a line from the hot water (output) side of my water heater, up through the roof, and down the front of the house to 6" above grade, OR, run a line from the hot water side of the sink nearest to the heater, then out through the nearest outside wall, and down to 6" above grade, then the relief valve goes on the end of that pipe in either case.

Sounds like a shitload of labor in either case, right?

Right... we all know you can get a water heater for a couple hundred bucks, right? Total quote for this job... \$1,444.00. So, insurance will pay for the part of the carpet that's damaged due to water, but not the whole room; and some in the hallway is damaged too, but only a couple square feet of it... so I get to pay for all the rest (like I'm going to replace half a room's worth & 1/10 of a hallway's worth of carpet, right? Like you could actually get away with that.), and if course, I have to pay for all of the plumbing work, since that's not covered. There's mold in the carpet now, and it's being dried out by one of those companies that does that sort of thing, but my daughter & I are going to be staying in a hotel for a couple of days due to health concerns with the mold, and also because of no hot water at the house at this time. Insurance will pay for a couple of days of that, but it's going to take longer than that (4 days it's looking like) to get all this shit done).

This is simple, and it's costing me a bundle... I can only imagine what the people whose houses were screwed up, but not completely flooded out, by Katrina are going through.

And now that the pool filter's up & running, and I'm using the valve for the solar panels again, I notice that there are now two leaks coming from the solar panels themselves & water is streaming down the back of the roof when that valve is engaged.

AUUUGGGH!!!!

I don't even want to tell you about the picture window that blew out during a windstorm about six weeks ago.

Neil, lamenting his circumstances Jesus Neil, quit complaining. I can't find a Win XP driver for my Opcode SonicPort and eBay just changed my password. Damn, I can't bid on a pair of pants. Let's put things in perspective, ok. Seriously, sorry to hear about the major difficulties. Oh bad luck comes in threes. Did three bad things happen yet?:-)

love the UAD
plugs. The 1176 sounds just as good as my 1176 LN IMHO.

People just love to debate stuff.

you and walk you through it?
Steve CoxIt's an older box running a Pentium III.

It's cool. I've still got a spare CPU coming for only \$15, so that's no problem.
I actually only need a new fan, but I doubt I'll come across a PIII fan for
less than that so I might as well grab both.

Cheers,
Kim.

>Speaking of rain, or in this case water, I can tell you a little about going
off to another city for a Christmas party, and getting home the next day to
a house with a broken water pipe upstairs with water still running and the
entire lower floor flooded, needing new hardwood floors, wallboard,
ceilings, fixtures, etc, and the bad thing was that we pulled out the carpet
and hung it over the fences to let it dry out and somebody stole it! And
the really bad thing was that the house was covered for flood damage, unless
of course it was the result of a broken water pipe!!! I won't even mention
the repair costs. This adds up to more than 3 IMO. Now, you should all
feel much better. : -)

....hold on...

....I have a wobbly toilet... ;oS

Cheers,

Kim. Well, if it makes you feel better I did get a morbid giggle out of your dilemma, and now, of course, I feel guilty for laughing at another's misfortune, and don't know what to do about my guilt.

With any luck my wobbly toilet, which I'm hoping will make it to the rental inspection in two weeks, will collapse and spill poo on my foot, and then I will know karma has come to get me and I can stop feeling guilty.

Meanwhile, best of luck to you and your daughter... and try and think of your motel stay like a holiday. ;o)

Cheers,

Kim.

paid first though. ;o)

I saw that there's a jazz and funk pack you can get now... that may be
just tooooooooooooooo tempting. ;o)

I downloaded the manual... tonight I'm going to have to get down and try
and work out how this thing works...

Cheers,

Kim.

I on the other hand have what my better half describes as a "cute little
butt"

Yes I know more information than you need but hey, you brought it up!

heeehehehehehe

DonWell seeing as how we're on the subject...

....and feeling somewhat uncertain we should be here, but continuing against my better judgement... ;o)

....my ass isn't yet the wobbling type I don't think. It's still fairly muscle bound. Indeed a mate's girlfriend recently described my ass as "a black person's butt". Not that I'm particularly aware of what the asses of different races are like, but generally I consider those of darker skin to be more toned than us generally flabby white folk, and mine pokes out a bit, but in a defined way... ...I think I'll shut up now. ;o)

Now my stomach on the other hand needs some work... ;o)

....but I'm thinking it's the beer, and I'm not likely to give that up. ;o)

....but I can assure you the problem is the toilet. ;o)

Cheers,
Kim.

>Hey Neil, I've tried to stay with the all (or most) fx in one box route to keep noise down. The only stomp boxes I use are a cry baby, dual RAT,

and a line6 delay (the green one, getting ready to replace it with a Yamaha UD Stomp I recently purchased though (thanks Don for the tip :)). I tried quite a few rack units and a couple of years ago decided to go with a Lexicon G2 even though it is out of production. There are quite a few really nice sounding effects and the unit does not degrade the sound like some of the cheaper floorboard units do or like having a million stomp boxes does. And, this is the only unit I have ever used that sounds exactly the same by-passed as it does with no effects enabled. I've seen easier user interfaces but I've been really happy with it overall. I play live a lot and the one thing that this unit does that sold me on it, that no other stomp box or rack unit I could find would do, is the ability to tap in (via the pedal board) the tempo for the tremolo effect. They are still pretty pricy, but so far, I haven't found anything that tops it for versatility, programmability, and quality for playing live. Hey, Steve Morse uses one too! :) I'll be curious as to what you wind up getting though.

Got any good suggestions for amps? I currently use a single Fender Hotrod (40w) but I'm looking to go to an A/B set up. Not really happy with the clean channel on that Fender but I do like it's distorted channel. Someone here a while back suggested Carr Amps <http://www.carramps.com/>. They're really expensive but I liked the sounds I was hearing from the demo clips on their web site. Good luck with your search.

Cubase SX on a second box and have Paris networked to this box via TX
teleport therefore allowing for "Auto latency compensation" within Paris?

If so, this is awesome news...!!
If not, then back to regular scheduled programming.

>If Cubase SX PDC works with FXT then I think this will work. Right now, I
can use UAD-1 plugins as inserts by sending/returning audio from Paris
to/from Cubase SX with the UAD-1 cards residing in the Cubase SX machine. I
will be experimenting with installing an FX Teleport *wrapped* UAD-1 plugin
from the FXT server into an insert in Cubase SX, then sending/returning
audio from Paris to/from this plugin in Cubase SX.

I will probably be posting up about this tomorrow night.

>Yup 128 meg. This was Brian's config when the Atlon 750s were rockets.
Amazing. Easily do 32 tracks (only 2 eds installed) and haven't run out of
plug in power, eg old Wave, TC and Antares. Don't use these much anymore.
Maybe a dessert.
We use Cranesong, Manley, Lexicon, and a couple tasty old Orban
paragraphics Sometimes we insert on channels, sometimes strap across the 2
bus. Knowing Paris latency times, and having significant IO, reamping is a
snap.
We mix down to Audition on a separate box w/ a Lynx L22 via analog.
Would someday like to upgrade for cool new plugs and features but everything
here works so well, (haven't crashed in months and that was graphic related)
and sounds soooo good I do not know what would improve the digital side.
Clients return, and folks say we sound like 2 inch.. Big, fat warm, and
deep.
This is a testimony to Paris, a system that never should have gone away. Now
only the blighted \$20k + pt hd is left as a DSP based recorder. Bah!
Blighters.
We are a busy pro studio that works everyday, and pays our bills.

I am moving to Cubase sxWill do. I've been having some problems getting FXT to work, but I
believe I
have determined what the problem is so hopefully I will have time tomorrow
to get this resolved.

>Hey there,

I got a Rocktron Prophecy for xmas and I gotta tell ya, this thing Totally Kicks Butt. I've had a lot of amps and processors go through here, but this one is a keeper.

It's not all soft and mushy like the Pod or other such devices and it has the beauty of a tube amp w/o the nastiness of tubes vis-a-vis manuf inconsistencies, thermal fatigue etc. I've got it going through an Alesis RA300 power amp (I still can't shake myself of that amp, it's pretty guitary...wouldn't use it for anything important ;) into a Marshall Cab that's loaded with a pair of G-12's and a pair of Vintage 30's. The Rocktron is a tad pricey but highly recommended.

It also has some nice effects and a simple harmonizer (non-scalar) which, while not the best idea, is still useful for a couple of things. It also has eq per channel / pre dist / post dist/ and global, which give a ton of control over how that dist sounds, and it's a fabulous dist. The clean is also beautiful to the max but clean seems to be easier to accomplish in most gear.

>Hey guys,

Well, it's been two freakin' years since I started getting sick and it wasn't until Nov that they figured it out 'cuz I didn't have the one main symptom that they look for...sheesh..dr's...
LSS...I'm back to health and feelin' great....downside - I've had to put many things, including my music/studio endeavours, on hold. Now that I'm back to normal I can begin again where I left off.

So where I left off was getting Nuendo (in comp 2) to slave to Paris (comp 1) via paris adat card and digi9652 card.

I have the settings and p-bay in Paris set correctly, I'm pretty sure, 'cuz when I hit paris/play, the digi9652 control panel indicates that the sync is working and the time begins to roll in comp 2.

But Nuendo doesn't start. I've set it up the way I think it should go, having done syncing (LTC) in Cubase for years, but I'm doing something horrible wrong I suspect. Word clock is also connected. So I'm not sure what's happening to make Nuendo not respond to the incoming 9-pin signal.

Does the paris/digi setup allow me to use APP or regular adat sync (that I'm in the dark about and assume it uses the optical connections, yes? Dunno. Am I even using the correct way of going about syncing? What do I need/need-to-know to make these two comps dance?

I'd sure appreciate some help getting back up and running. :)

jefi believe that it is called (for any race) a bubble butt...err..what you describe yours as...or as you say was described to you by a (wink wink) mates "girlfriend"...oooookay fine.

>Hi Jef,

Nice to see you back on the group, and in good health!

AFAIK, the Digi series had issues with syncing using the 9 pin port. I seem to recall BT having issues with these cards and had to switch to the HDSP version. I was not succesful at getting this to work here with a Nuendo 9652 card (Digi 9652 re-badged for Steinberg) and made the switch to the HDSP version also (anyone want a cheap Nuendo 9652 card? ;-). I think it had to do with either NU/Cubase software versions, or operating system... can't remember exactly what it was. Perhaps DJ has more to add here...

Regards,

David.

> jefAnyone interested in distributing your music on the same platform with the
majors? We have license agreements with the four major labels: Warner, Universal,
EMI, Sony/BMG

You'll stand to make about 60 cents per track or about \$6 per album. Compare that to the 17 CENTS an album that a label will give you. We won't take control of your image or your content either...

Here's the beauty - your fans come to your site to purchase your music - when they purchase a track from Coldplay, Black Eyed Peas, Rascal Flatts, Metallica, John Legend - Whoever - you'll make 5 cents off of each of those cuts. Residual income on projects you had absolutely nothing to do with.

Call me at 210.849.7021 or drop me an email at mail.rhino@gmail.com

Visit my site at www.burnlounge.com/rhino and click on Watch the Commercial.

I look forward to hearing from you soon.

Success,

Ralphyou guys stop this right now

protocall or something like
that. I'll have to check tonight when I can get to this. I also recall
issues with the older *digi* 96 cards not syncing to Paris. My best advice
would be to sell the old card and get an HDSP model. These just work
flawlessly with no gnashing of garments, rending of teeth.

;o)

Well, I much prefer OSX to Windows XP, and I've been using both for years and Windows since 3.11. Given the Mac Mini's size and form factor (part of what you pay for), I would hardly say that it's overpriced. If your looking to save space and be able to cart the thing around easily, it's certainly an attractive option. And the Mac Mini's are nice for running node computers in logic 7.

Cheers,

TC

Been working with a 3 card paris rig running on ME for years. But it fell apart last week so I'm going to make the XP move. I would really be greatfull for input on stable hardware setups that some of you may be running.

The only hardware that I want to use from my old set up besides the three Paris cards is a Matrox G-450 duel head video card.

Thanks

> I am moving to Cubase sxl was just posting the info about it. I'm not looking for the big Mac vs. Windows debate. However, I will give my prospective on the over price Mac.

There is a lot of ways of looking at things. People for years have said ignorant things like there's no software for the Mac. Well the Mac has been able to run Windows for about 15 years. The fact is and has been that the Mac has been able to run all the Mac software, and the great majority of windows software. That's more than a PC can do. I think that is value.

Now it will run Windows natively, I think that is value. I can run all my software on my Mac, cruse the internet, run Paris or other audio software, all on the same machine with out being concerned with viruses. I think that is value and piece of mind. I don't have to buy two machines, I've seen on this NG where people have said that they have two machines and they never go on the net with their audio work station. I think that is ridiculous. What do two machines cost? What do two machines cost to maintain?

I agree with you that Apple computers are over priced! That is vary disappointing for any Mac user. However, I still think that there is value, and some advantages with a Mac. I think you have to look at the overall picture, the cost of the box is not the only thing to factor in.

I've always said, if your a PC guru and you have years in to learning the ins and outs of a PC, there is no sense in learning a Mac. This, I think is about to change. What if Apple computers cost about the same? Not that this is going to happen any time soon, but, would you consider buying one then? What if Mac OSX could run any and all of your windows based software natively without speed issues. Would you consider the purchase of an Apple computer? This could vary well be Apple's first step in kicking that door open and doing just that. (Pure speculation on my part;))

I think it is a step forward, It gives people choices. The bad news is, Apple does point out that if you use Windows XP on a Mac, that your machine will be subject to attacks and all the windows viruses.

I use and like both Windows XP and Mac OS.

Nice, DeeJ - that Pie-an-uh sure does sound shweet!

And the voice ain't bad either! :)

NeilFor youse guys that ARE using SX, but summing through Paris,
are you still noticing much of a difference if you're using SX
v3? I upgraded to that from v1.xx recently and I do notice a
big difference in the summing - the earlier version I had was
indeed thinner-sounding than v3, I thought.

have too much of a life to come up the year plus learning curve to create
new paris effects :-)

I could not complete the XP install because it requires XP SP2 and my installer
is SP1 :-)

I will try WaveLab and V-Stack when I get it working and I will report back.

I understand that the built in SPDIF ports work fine in XP, but MIDI and
FireWire audio will be new territory.
