Subject: Re: i'm screwed!!

. If you want to render them, you need to double click on one of the files to bring up the sample editor, hi-light both files in the editor bin, drag them into the editor, and select plugins. One other thing, if there's any sort of setting you used on the plug, save it first (before the sample editor step) so you can get the it back in the sample editor.

Rod

>the tracks and use the plug in?

>ThanksSo I go to record a vocal in a project and it won't let me set a record path.I do the cntrl R and use set record path,but the window for me to pick a path never comes up.

Fortunately its a small jazz project so I imported the tracks into a new project and was able to record the vocal there.

Any ideas or fixes on this;I've never seen it before.

3GHZ P4

XP PARIS 3.0

PeteYeah, releasing software before its time is an epidemic. Software QA is a lost art.

Before upgrading anything, from the OS on up, it pays to check online reports and see if the update is actually working.

Logic is at 7.1 now and with that and the pro-apps OSX update tweaks from Apple it has become much more stable. The crashing thing has stopped happening here. Still has that pesky bug where it sometimes forgets to play an soft synth - have to restart the project to get it back if that happens. But otherwise as far as handling tons of tracks, FX and plugins, it's working better now. I don't use Ultrabeat but I do sometimes use Sculpture (best to have a G5 for Sculpture).

Cheers,

-Jamie
