>>It was a clever parody of those old Mac commercials. The part about the dock
was true. My solution was to just hide the damn thing. At least that way it
only pops up when I push the cursor clear to the bottom of the monitor.
Anyway, they did do a good job with the parody.

The short answer is, no PCI slots, but you might want to watch the hardware video, it may give you some ideas.

http://www.museresearch.com/movies/Receptor_Part_2.mov

(859) 635-5762HI james,

Your gonna see allot of this for any of the companies that have cross platform apps. Some of the Mac only based coders may have some growing pains. Hey maybe this will make some of Mac only apps folks get their heads out of their asses and release windows version now.
