I agree! Wow.

I'm going to be shedding some of those  
likes shortly.

They are midi files he needs to send me as audio. How do you record them back as audio tracks? is there a patch bay type of thing? Sorry bout all these questions. This guys seems a bit intimidated by the software and just wants to "make beats"

Thanks to both of you.

>> Wave files. Wow, on my little G4 speaker I gotta say I love that i5, it has some nice  
low end thump bit seems super clear in the mids and has a nice crisp top.

The d1 was close with a little less whomp, seems like the Audix line is fairly  
scooped. I have a d2 and it also has that clear sound going on, The 57 sounds  
so familiar, like every snare I ever mic up. I did not like the Blue at  
all.

On guitars I also liked the i5 but wonder if too much of this would leave  
a gaping hole in a recording, I also dug the 57 of course. could be the i5  
on rythm and a 57 on lead would be cool. I was not impressed by the 609 at  
all.

The long road guy for The Who told me the 409 was way better. (they used  
4033's on Simon Towshends acoustic amp)

Anyway, Thank you all for doing this stuff.

I'm getting one of those Audix 15's for the next session.!

Yeah, but you really should use a ribbon...should this be in the \*new BBQ\* thread?  
Ouch, bad joke (slaps hand)

Seriously though guys... I cannot tell you how bad I've seen it around here in Oklahoma. Chuck Wilson has it correctly from what I've noted, at least here locally. Nobody wants to spend money on the audio to do it right, and they readily accept two prong (read: not grounded much less GFCI) as the standard. I had considered getting into it at one point and was just in awe of the things I was seeing. Dropped that plan like a bad habit, because it's allll about not spending the money. Something like this was just bound to happen sooner than later, and I'm kinda surprised it didn't happen here in the buckle of the Bible belt.

There is one brave soul on that group trying to straighten out all these poor volunteers who are trying to keep the pastor from the same fate...

The one that got me was the discussion about how wireless wouldn't solve the problem because you would still get shocked by the battery. Oh and the one about how you would be ok with turning

off the phantom and using a dynamic...

arrggHHHHHH!!!

It's no wonder people get shocked. The worst danger I have ever seen is the old 1950's guitar amps with a non-polarized 2-prong power cord. You have a 50-50 chance, at any given time you plug the amp in, of having 117 volts on your fingers....

You won't notice until you grab something that is grounded...

zzzZZZTTTTT

Not a very romantic way to die for your art...

I will not drop any third prongs from any cords at any time, and if I see the client do it, I send the boss or head pastor a letter releasing us from liability and warning them of possible results.

I love my church clients. Most of them are great people, but now and then you get a real weenie...

>I believe I did try the Kurzweil 2500 when I was in Dallas a few years ago  
and as I recall I did like the piano sound. There was so much noise in the  
music store I really couldn't tell a whole lot - they were expensive.

Not sure what the VSTi is - software synth? - but I will search it out. My  
JV is 13yrs old and I haven't heard any of the newer Roland stuff. I have  
heard a lot about the Giga Piano. I dont have a sampler or any way right  
now to play sample libraries. By voices, I was just referring to sounds,  
but I do like to use some background voices for church music work. My JV  
has a couple that are fair. It also has a decent piano and some nice pads.  
Rythmn guitar, especially heavy, has been a real challenge though. It has  
a built in sequencer, 8 track, which is pretty nice. The Roland manuals  
apparently were written by engineers, not musicians, and took me several  
months to get through. I do have a couple other computers I could dedicate  
to music and midi: 2500+ Barton and 1.33Ghz AMDs. Also have an OCed  
Celeron 850 that I am using for internet and some older peripherals/programs  
under 98se. I have Paris on my P4 with 1GB ram. I could put Paris on one  
of the others and use the P4 for the cpu intensive work. I have OCed the  
P4 to 3.1GHz with good stability, although I have it running stock now while  
I am working with/learning the Paris app. Also have noticed that everything  
is now 24/96 it seems. Is there really a lot of noticeable difference from  
20bit, at least in Paris?

Thanks much,

Edna

>hehe... the old "blue flash" when the guitar player steps up to the mic... I've seen that a few times, usually from old Fenders.

Churches are the one group who far too often cut corners they shouldn't... all in the name of saving money. Can't remember how many times I've seen clear and present Danger in Church wiring jobs. We have actually declined to work on some of them if they won't go for our "minimum spec".

David.

I still had a phone where I could call everyone and pay the bills to get the phone reconnected! :o)

I haven't been able to notice any quality difference at all as of yet, but I am using the world's cheapest worst quality wireless handset to do the tests. ;o) Still, the fact that the delay isn't noticable is a start.

I'm stoked! :o)

Cheers,  
Kim.I didn't know.... thanks Dimitrios!

>Hi,  
I lost all my Paris skins from accidental erase !  
Anyone has gothered them ?  
I am looking mostly for the balck ones (not with the yellow,purple leds etc)  
But I could use all.  
Regards,  
DimitriosI fired up an older Windows ME PC and decided to upgrade Soundforge on it,  
which requires Directx 8. I had effects before that.. now all I have are  
two selections..

NO EFFECT  
EXTERNAL

can anyone help.. of course..I have a remote session tomorrow that I use this pc for..

thanks

nickHave you tried re-installing Paris? Back-up your effects files first or you will lose your presets. Remember to re-boot after each step.

David.

>I'm thinking about picking up a 200gb Seagate Hard Drive mainly because the warranty is so much longer than the other brands (5 years). Any experience with these.

BarryI spoke to Erling on it a few months back too with same deal. I understand he gets a bunch of free overseas minutes every month. My plan on the other hand costs \$1.72 or something to call the U.S. or U.K. for an hour... hardly going to break the bank. ;o)

Cheers,  
Kim.

An excellent move IMO.

DCWe use Sunrocket ([www.sunrocket.com](http://www.sunrocket.com)) it is 199.00 for the year which is cheaper than Vonage. They also threw in 2 great phones (they would be about 100.00 at Target)  
My wife is British, she gets that same 100 minutes a month to the UK.  
The web interface is cool too. you also get 2 phone #'s your old one and a new one,. Service has gone out a couple of times in 6 months, but it seems like they upgrade the quality every time. and really it was no big deal, just a few network issues. Let me know if you sign up, they have a rewards thing.
