Hi=20
Tom,

I have an idea.

Try removing UseHouseSync=3D1 =
from the=20
paris.cfg file.

Next, remove your default project from the =
program=20
files\emu\paris pro folder.

Let me know if it =
makes a=20
difference.

Good luck!

Mike

r />

I'm not sure this will make you feel any better, but we had basically =
the
same experience at work with am EMU 1820M. The external breakout box =
died,
and Adobe Audition became useless. It was the same kind of nightmare. =
Two
employees stayed up all night trying to sort it out to get a tape out =
to
a TV station the next day.

I wouldn't give up on PARIS over this. Hardware failures happen no =
matter
what platform you use - even tape - and they can be hell to sort out. =

I'd ask your tech to lend you a PC, and just try installing a simple =
PARIS
system in there. If it works, just get a new PC. =20

I look forward to reading your post when you get this sorted out!

Good luck,

Mike

Hi=20
 Tom,

Yikes! Well, removing the house synch line from the =
cfg file=20
 and removing
the default project would not affect whether Windows =

boots or=20
not. Both
are not looked at by anything until the PARIS =
application=20
loads.

This is sounding more like either dammaged EDS card(s) =
or a bad=20
motherboard.

I'm not sure this will make you feel any better, =
but we=20
had basically the
same experience at work with am EMU 1820M. =
The=20
external breakout box died,
and Adobe Audition became =
useless. It was=20
the same kind of nightmare. Two
employees stayed up all night =
trying to=20
sort it out to get a tape out to
a TV station the next =
day.

I=20
wouldn't give up on PARIS over this. Hardware failures happen no =

matter
what platform you use - even tape - and they can be hell to =
sort=20
out.

I'd ask your tech to lend you a PC, and just try =
installing=20
a simple PARIS
system in there. If it works, just get a new =
PC. =20

I look forward to reading your post when you get this sorted=20
out!

Good luck,

Mike

ave a new computer with paris installed on it already.
I will take it back from my tech tomorrow and try it.

If I have 5 bad EDS cards then I'm outta here.
They worked last week. I had one and maybe three burn't mecs.
Even then Paris worked with all 5 cards and one Mec.

There is no rhyme or reason here. What is causing the hardware to go?
I'm still not totally convinced it is gone. Tomorrow will tell.

Thanks for chiming in at such a late hour. This is my twice/week event
with Paris.
Tom
