Other:

BrainDoc Channel Tool:

This is a very simple tool that basically allows you to set levels/phase/etc on a single channel. Handy if you've got something that you've automated volume on, and it's a little hot or a little soft overall, but you don't want to rewrite all the automation moves; OR if you're in a Native app & you've got that overstuffed mix buss thing happening - just insert this on all your audio tracks & bring all of 'em down by the same degree (like we discussed in another thread):

Product Page: <http://www.braindoc.de/english/vstEn.html>

Download: <http://www.braindoc.de/vst/ChannelTool.zip>

Gvst GFader:

An even simpler version (level ONLY) of the Braindoc-type tool mentioned

automation moves:

Product Page: <http://www.gvst.co.uk/gfader.htm>

Download: <http://www.gvst.co.uk/dlgvst/GFader.zip>

Voxengo Audio Delay:

OK, this is NOT a delay chain effect, it allows you to delay the sound by a fixed number of milliseconds or sub-increments thereof. I found this useful

a more realistic space for the e-pads, so I sent those to an aux buss, inserted this on that submix, and delayed the audio by like 3-4 milliseconds (like

She lives here in Northwest Indiana now, and was the in-studio guest
on a friend of mine's radio show Sunday night. So, I got to spend a
couple hours as part of the show, and chatting during songs.

What a sweetheart. Also hot, in a hot rock chick sort of way. And
she baked cookies. We had two plates of homemade chocolate chip
cookies to munch on. Yum.

Pamela has a new solo album out called "Stories from a Blue Room."
It's a rocker. I took photos, she gave me a copy of the album and some
cookies. Not a bad way to spend an evening.

She's going on a solo tour this summer, most likely with Dio's band
since Dio is currently on tour with Sabb

http://www.youtube.com/watch?v=AGHty_S0TU0Sony Oxford stuff (The kind of EQ and compressor you could use on every track)

EMI Abbey Road compressors (Not cheap but good)

Nebula (only the free version available as of now, but larger version soon)

Hydratone by Tritonedigital - (Awesome character EQ)

>Hi,
For those of you who use Pulsar cards I have a nice tape/tube emulator made
that I made for free.
Anyone wanting this just email me.
It is also uploaded on Pulsar forum in device section called tubetaper.
Graphics don't look nice but another graphics developer will make it look
as it sound great !!
Enjoy.
Regards,
DimitriosWhat did he do to your LXP-1 & how much? I use one of them dinosaurs with
my mini-live rig-it's small & old but still sounds great, but hey, if it
can sound better...

My buddy Swen is having streaming problems with a large project. What are
the settings for rectifying that again? Sorry to be an airhead...

JimmyHere's the troll pistols.I'll check it out soon.

There are some _really_ nice third party devices for CW gear, both paid and
free. The SpaceX stuff is killer, and one of the free device guys did a spring
reverb that just KILLS.

Thanks again for hipping me to CW, Dimitrios, the only thing I'd change is
I'd like another 15 DSPs and a few more hours per day to play with them ;-)

s.You would be calibrating the inputs REALLY LOW.

+4 is the **0VU** setting on pro gear.. which can be anything from -21 dB to -9dBFS depending on who makes the gear.

The idea is to set whatever you feed Paris with to 0VU (console, pre's etc) then adjust the input trims to *your desired* level for 0VU. Here, we used the full output level of a DA88 to determine the input cal for our cards (at the time, we transfered in a LOT from DA88/38)

Basically, you want the head-end stuff to be operating at an optimum level without the Paris inputs clipping.

David.
