<grin>

If you want that, then this is the one:

http://www.musiciansfriend.com/srs7/g=key/search/detail/base_pid/702218/

Still cheap. Haven't used it myself.

>La Mont,

I started noticing something sort of mushy in SX in the low end at around
24 tracks. It could very well be that I just don't know how to mix on a native
system though. Fire it over lightpipe into the Paris mixer and it gets big
again. I'm still summing in Paris and actually setting levels and fader/FX
automation on both DAWs. I'm getting basic fader moves done in SX and then

Subject: Re: So right about now I'm getting ready to kill somethin'
Posted by [Deej \[1\]](#) on Fri, 30 Dec 2005 04:10:06 GMT
[View Forum Message](#) <> [Reply to Message](#)

tweaking them in Paris. It's pretty wild to watch a mix happen here. I'm
using a fair amount of analog gear in my mixes. I've got 10 analog I/O in
my Cubase DAW and I'm using them all for inserts of analog comps and EQ's.
In Paris, I'm patching in analog qand digital reverbs and delays. For a while
I was paranoid about signal degradation with this many AD/DA's. Now I don't
even think twice.

Last night Tony posted up a song that I mixed on his site.

[http://www.mercysakes.com/paris/Doug%20Joyce/Faith%20In%20Lo ve/](http://www.mercysakes.com/paris/Doug%20Joyce/Faith%20In%20Lo%20ve/)

It's about finished, maybe a little more LF and vocal rebalancing and a little
de-essing that I'm going to add. There are 30 tracks-12 drum tracks, vocal
track, 15 acoustic instrument tracks and 3 x electric bass tracks. They've
got external processors all over them....10 x AD/DA's with analog processors
in cubase Sx and another 6 x AD/DA's in Paris, but I'm happy with the mix.....and
what's most important, so is the client. It doesn't have that linearity and
accuracy that I hear in the new PTHD, but we were going after a retro feel
and I think we achieved it. I think the Paris mix engine has a lot to do
with it all hanging together. It just doesn't sound at all the same if I
sum it in SX. Much smaller sounding. th

is mix has had no *mastering*, though
NoLimit was kissing the Paris mix bus.

om tips

Processor Scheduling for Background Services
Visual Effects for best performance
Switch Off Desktop Background Image
Disable Screen Saver
Disable Fast User Switching
Switch Off Power Schemes
Switch Off Hibernation
Disable System Sounds
Do Not Map Through Soundcard
Disable System Restore
Disable Automatic Updates
Startup and Recovery Options
Disable Error Reporting
Disable Remote Assistance
Fixed Swap File (Virtual Memory)
Speed up Menus
Disable Offline Files
Disable Remote Desktop
Disable Internet Synchronise Time
Disable Hide Inactive Icons
Disable Automatic Desktop Cleanup Wizard
Disable NTFS Last Access Time Logging (NTFS Only)
Disable Notification Area Balloon Tips
Disable CDROM Autoplay
Disable Disc Indexing

Additional tips

2 audio Partitions
Use NTFS drives with 64k clusters
In BIOS disable USB, LPT1, Serial port
Remove Messenger
Classic Mode
Classic Start Menu
Power Schemes: you can have the monitor turn off but set Turn Hard
Drives off to NEVER
Disable the Computer Browser in Services to improve mapped drive browsing.
Disable your network card by right clicking on the nic icon
Defrag regularly
Keep your desktop clean
No wallpapers
Set video to highest color depth
Increase your IRQ priority
Disable Power Management
Set graphic acceleration to full
Disable background applications
Disable USB
Graphical window settings
Disable NTFS Last Access Time Logging (NTFS Only)
Make sure DMA mode is enabled on drives

Restart your machine at this point in time. When you come back the first thing you should do is defrag the main drive even if it doesn't say it needs it. This way the swap file has been truly set and you're ready to continue.

Processor scheduling should be set to background services and not Programs.
Start > Settings > Control Panel > System > Advanced > Performance
Settings > Advanced Tab > Background Services

Advanced tab: Press Settings tab under Performance Visual Effects tab:
set to Adjust for Best Performance.

Switch Off Desktop Background Image
Right Click Desktop > Properties > Desktop Tab > Background None

Click on the Screen Saver tab, Set Screensaver to None, Press the Power button near the bottom

Disable Fast User Switching
Start > Settings > Control Panel > User Accounts > Change the way users log on or off > Untick Use Fast User Switching

Switch Off Power Schemes

Start > Settings > Control Panel > Power Options > Always On > Turn off monitor and turn off hard discs to Never

Switch Off Hibernation

Start > Settings > Control Panel > Power Options > Hibernate > Untick Hibernation

Disable System Sounds

Start > Settings > Control Panel > Sounds and Audio Devices > Sounds Tab > Sound Scheme to None.

Do Not Map Through Soundcard

Start > Settings > Control Panel > Sounds and Audio Devices > Hardware Tab > (highlight your soundcard from the list) > Properties > Audio Devices > (highlight your soundcard from the list) > Properties, and check the "Do not map through this device" checkbox.

Disable System Restore

Start > Settings > Control Panel > System > System Restore Tab. Tick the "Turn off System Restore on all Drives"

Disable Automatic Updates

Switch off Automatic Updates by going to Control Panel, System, Automatic Updates and ticking the box labelled "Turn off automatic updating. I want to update my computer manually."

Startup and Recovery Options

Right click My Computer and click on Properties > Advanced > Start Up & Recovery Settings and uncheck "Automatically Restart".

Disable Error Reporting

Start > Settings > Control Panel > System > Advanced TAB > Error Reporting > Click the Disable Error Reporting box (Tick the "But Notify Me When Critical Errors Occur" if you prefer)

Disable Remote Assistance

Start > Settings > Control Panel > System > Remote > Untick "Allow Remote Assistance Invitations to be sent from this computer"

Fixed Swap File (Virtual Memory)

Select the Advanced tab of the Systems applet and then select the Performance settings button. Then select the Advanced page. In here it is possible to customise the Virtual Memory. For custom size, this is often recommended to be 1.5 to 2 times the amount of your total RAM for both initial and maximum size. Set this to a fixed minimum and maximum value according to your existing RAM

Speed Up Menus

You can use this tip to speed up the Start Menu in Windows XP. You can customize the speed of the Start Menu by editing a Registry Key. Click Start, and then click Run. Type Regedit in the box, and then click OK. Expand the menu in the left panel and select the HKEY_CURRENT_USER\Control Panel\Desktop folder. Scroll down in the right panel and double click on the MenuShowDelay file. In the Value Data box, change to default value for the menu speed from 400 to a lesser number, such as 1. Click OK.

Disable Offline Files

Start > Settings > Control Panel > Folder Options > Offline Files > Untick "Enable Offline Files"

Disable Remote Desktop

Start > Settings > Control Panel > System > Remote > Untick "Allow users to connect remotely to this computer"

Disable Internet Synchronise Time

Start > Settings > Control Panel > Date and Time > Internet Time > Untick "Automatically synchronize with an internet time server"

Disable Hide Inactive Icons

Start > Settings > Taskbar and Start Menu > Taskbar TAB > Uncheck "Hide Inactive Icons"

Disable Automatic Desktop Cleanup Wizard

Start > Settings > Control Panel > Display > Desktop > Customise Desktop > Untick "Run Desktop Cleanup Wizard every 60 days"

Disable NTFS Last Access Time Logging (NTFS Only)

Start > Run > regedit > HKEY_LOCAL

egistry

Editor. Log off Windows, and then log back on.

----- Disable CDROM Autoplay

One of the very important (and well documented) tweaks in Windows 98SE, was to disable CDROM autoplay (auto insert notification). Disabling CDROM autoplay no longer offers a significant performance benefit in Windows XP, and therefore you do not need to disable it. Just don't insert a CD during a crucial recording.

However, if you really want to disable it then here a few different methods.

Method 1

Start > Run > Regedit

HKEY_LOCAL_MACHINE\System\CurrentControlSet\Services\Cdrom

Set autorun to 0.

Method 2

Open My Computer Right Click on each CDROM and choose Properties Click on the Auto Play tab In the drop down box you can choose the Action for each choice shown in the drop down box

Method 3

Go to Start->Run->gpedit.msc Computer Config -> Administrative Template -> System Double click Turn off Autoplay Enable it.

Disable Disc Indexing

Indexing Service is a service that extracts the information from a set of documents and organizes it in a way that makes it quick and easy to access that information through the Windows XP Search function, the Indexing Service query form, or a Web browser.

This information can include text from within a document, (its contents), and the characteristics and parameters of the document, (its properties), such as the author's name. Once the index is created, you can search, or query the index for documents that contain key words, phrases, or properties.

Additional tips Descriptions

Partitioning. A useful tip when configuring your audio disc, is to split this into two partitions. Set up a smaller "audio scratch" partition - say 6GB of a 30GB hard disc. This partition will be used for the songs that you are currently working on. The benefit of a smaller partition is obviously quicker defragmentation. If you use the entire 30GB as one partition, then this will take ages to defragment. When you are finished with a song, transfer the audio files to the non-scratch partition, where disc I/O performance isn't so critical.

Messenger starts up at the windows load up but we can get rid of that in no time at all..

Start Menu>Run

Type this in exactly as it is here:

RunDll32 advpack.dll,LaunchINFSection %windir%\INF\msmsgs.inf,BLC.Remove

Hit Enter...you will see a DOS-like shell appear and disappear very quickly and then it will ask you to restart.

Right-click on your desktop, and then click Properties.

Click on Themes tab

Set Themes to Windows Classic

Also do this for the Start Menu:

Right-click the Start button, and then click Properties.

Click Classic Start menu.

Click the Customize button to select items to display on the Start menu.

By default, selecting the Classic Start menu also adds the My Documents, My Computer, My Network Places, and Internet Explorer icons to your desktop.

Increase your IRQ priority - You can increase the IRQ priority of the real-time CMOS clock to gain some system perfor

To keep it simple, just run the "XP" Restore Wizard..Start> run> tpye in:rstrui

This will start the restore wizard..Go back a day or 2 to fix things.

Outlook should recreate it when opened again. If not, I would backup emails
and addresses and reinstall Outlook Express. That's the tech support answer
rather than the technical solution, but it still might be quicker than
trying to find the problem.

You could also check to be sure another instance isn't running (i.e. still
trying to send) - I don't know how that would happen after a reboot, but
with some crashed apps, it might be possible.

>Depends on the version of OE you're running, and the version of XP. Usually
you want to look in

C:\Documents and Settings\%username%\Application Data\Microsoft\Outlook\

and back up all of the files there. Then delete the most likely candidates
and keep restarting OE until you find what's wrong. It also could be

C:\Windows\Aplication Data\Identities\{some really long number}\Microsoft
Outlook Express

then try the same drill. However, what you're looking to do is just delete
the outbox that is FUBAR. Just make sure everything is backed up before you
start pitching stuff.

>Dedric, you captured my thoughts perfectly. Time after time I am amazed at
the CRAP that comes out of "pro" situations. I find myself asking "well,
I see it was really important to put your house clock in an oven to get better
stability, so much so that you found it necessary to insult your peers on
a recording forum. So why does the bass guitar you recorded sound like it's
coming from a dog's ass?" Most of the discussions I have been reading lately
on audio groups seem to be fundamentally pennywise and pound foolish. It
reminds me of audiophiles that put sandbags on top of their \$10,000 CD player
to damp mechanical resonances and then play the unit in a rectangular room
with no wall treatments. I think the recording industry suffers collectively
from a problem with priorities.

BTW, I heard the tracks from Albini's studio (recorded by another house engineer).
