sual C++ 4.2 cross platform
edition just to compile the code. The cheapest I've seen it for is around
\$80 plus shipping. If a Mac user wants to send me a copy or the \$100 (I
live in Canada and shipping is always stupid expensive), I'll get to work
on it.
But even then, I can't make any promises except to try.

All the best,

Mike

d fix some digital noise thing with eventiter !

Mike can you add a dry wet mix knob on reverbs ??

There is a way to use them on inserts but without this dry/wet thing it is of no real use !!

Thanks for your great efforts and I hope that everyone will reply to this and say at least a thank (some money to him is also better :))you Mike for what you are doing for Paris !!!

><http://tinyurl.com/m7avrHi> Dimitrios,

Thanks for you kind words!

It's not that we had sample rate conversion on the fly, but the math done to change the samples as they came through was all based on a 48k sample rate. So, all the parameters were around 10% wrong. Sample rate is used

for more than just what EQ to tweak - there's a lot of math that goes on regarding how the frequencies are affected, and a lot of that involves having the sample rate right.

The FreakQ was always set to 44.1. All the other effects I've seen are set to 48 by default. If eventiter doesn't make the digital noise at 48k, then I would say that there is a very good chance I can fix it.

As for adding a wet/dry mix, I think I will eventually be able to do that. I found a 100 page spec of the PARIS DSP assembler. I'm going to give it a read, but it will be a while before I can really do much with it. I'm just learning. :)

Thanks also for offering the hosting. I'm all set at ensoniq.ca for now.

All the best,

>Well, I'm not a true believe in the mix buss voodoo crew to begin with, but
if it sounds better I have no problem with that. IMHO the main reason Live
sounds weaker is because often the projects done in it use time stretched/beat
sliced loops. There's no way to keep pristine sound quality with that stuff.
However, my highest end soft synths (i.e. the Spectrasonics synths) sounds
as good in Live as they do in any other app.

My guess is that the '64 bit mixing engine' has a lot more to do with the
marketing department than it does Robert Henke.

Still, some of the new features look really cool.

>Dear Mike,
If you are gonna think about doing some new plugz here are some ideas to
catch on!

1) I buss adder !!!
Yes that is a great addittion !

This plug could use the out and in wires but the in wire should be able to
accept more than one out wire !!
Now you can only send one track to another, with another plugin like this
we could send all out wires #1# to a in wire #1# and have all drumtracks
send to another channle and then add an overall compressor !
Then the latency adder should be needed as to delay the audiotracks sending
to compensate for phase !

>Hi Mike,
the latency from DX does not work realtime.
t has to have an audio track there beeing played.
if you use wires out and in then it had to be as eds effect.
Anyway these are just thoughts.
I know of the 16 plugz limit.
But as I see in my mixes putting around 610 eds plugz maxes eds cpu.
So there is plent of 6-10 slots for this latency adder.

You can even use this when you use the paris as a mixer only sending audio from another computer to it via adat and then adding eds effects.
then DX latency compensation cannot do anything !!
Thanks for considering.
regards,
Dimitrios

Well, at least you admit you can't stand Mac OSX. The Question is why!
You don't need to answer that.

ontinue to move paris forward. I have made a donation as well.

ThanksNow that Steinberg has dropped support for the Midex, I'm wondering who makes a USB midi interface with tight timing.I thought this was so cool that I just sent you some money.

:o)

The did what???? In what applications????

TCBAwesome--will download and donate later this afternoon.

Many thanks!

>Hey DJ,
You once showed again to all of us what a hell of a nice person you are !!
My regards to you,
DimitriosI've still got my 3.0 software that isn't tied to any hardware card. You
never know what the future will hold.....plus, maybe Mike will have the time
in the future to create a VST version of these plugins. At any rate, I get
more support here for my ongoing endeavors than I do anywhere else so even
if I'm not using Paris right now, I want to contribute something.

You guys rock....well...except for Neil.....

;oD

To my ears, when I have to work in Sonar, it's the same bland sound..We take the tracks, import to Nuendo to mix..

gt; -steve the posting fool

Awww.....it was soooo cute!!! I don't see why they couldn't have
strapped a steak to her head and let it migrate to that, then allow it to
fulfill it's destiny

I'm gonna call PETA about this.."steve the artguy" <steve@headinthecLOUDS.com> wrote in

will it orbit the tree?Great reply. Thanks, so what do you set the bands in Cubase/Nuendo to?
What
do you set the green/yellow/red values to?

Thanks again,
JohnMy suggestion would be to use a separate K-system metering since your output buss in Cubase will be used for bounces.

But, if you want Cubase's metering to correspond to K-14 just to try it, set green max (yellow min) to -14dBFS, and yellow max to red min at -10dBFS. Of course these are just giving you peak levels and for it to be accurate, it must be correlated to 83db SPL in your monitors, C weighted using pink noise (and pink noise full bandwidth is different from band limited and there are discrepancies in what is considered the most accurate - e.g. Blue Sky's spec vs. Dolby, etc).

More later... gotta run take the kids to soccer....:-)

>Well, if you consider the difference btw an entry level HD1 vs HD2 Acel, thats
pretty competitive. The HD2 acel is becoming the PT system of choice for
a lot project pro studios. Bypassing the 96 io unit for a Apogee ADx16 or
even Lynx 16, you had a really nice rig with that C24 controller.

I miss not having a dedicated controller. I guse Paris spoiled me. I can
work wih a mouse very well,but as look back, I used the C16 alot..
