Heh.

Yeah, Winwood started out on B3 and switched to guitar for a while, than back to B3.

Cheers,

I did a ton of debugging last night, and I'm almost positive that I tracked it down to a timing problem in adat.dll. adat.dll was never updated as part of the update to the PSCL that was released with the driver. Also, it returns error code 7, which means that something timed out while it was waiting for the module to respond - it probably didn't wait long enough. let's hope that's all it is.

Cheers!

Mike

>Jeremy,

I look forward to hearing your work.

You know you can reroute the L & R outs of Paris
Submix A master mixer to another pair of 24bit outs
and monitor off of that while printing the 2 bus with fx
to the hard drive.

Draw a couple of lines in the patchbay, patch a few cables
and get a Central Station. I wouldn't use a Central Station
personally but it will serve your purpose for multiple ins for
monitoring.
