>Bill,

I'm getting real happy with this one. The Pultec is one of my essentials
around here just because it has such an organic vibe to it. the Neve has
this same thing going on, but it's a lot more flexible. I've got a song mix
happening right now with 18 x UAD-1 plugins instantiated, 13 of which are
pretty CPU intensive. I've got a Pultec, Multiband and 1176 on the bass bus,
Pultecs and 1176's on both beater and shell kick tracks, 1176's on a pair of

toms, Neves and 1176's on top and bottom snare, LA-2A on vocal and Neves on 4 acoustic guitar tracks.. The UAD-1 resource usage is around 56% on 4 x UAD-1 cards.

>When you say the center of the cabs should be at right angles you mean facing straight back and not angled directly at the ear?

I have researched many diagrams and the most common one is the 60degree equalateral triangle. This is recommended as follows:

1. Speaker centers 4-6 feet apart.
2. Listener positioned in an equalateral triangular position.
3. Speaker cab centers angled to point just behind the head of the listener (directly at each ear).

I know a few of you have made your own computer enclosures with soundproofing
design to quiet the control room.

Do any of you still have the plans you used?

I am interested to see your designs and hear from you how they worked. I
am fixing to build a new control room desk and was going to incorporate a
computer enclosure in the bottom of it.

Thanks,

BrandonI never found a good enclosure so my pc is on the other side of two walls
10" apart with 2 sheets of drywall on the outside of each wall. This is
totally silent. And the MEC is on a 20' SCSI cable. I would love a SILENT
enclosure.

that either.

Besides, the last thing you need is more tentacles on the octopus. Just say
no man.
