You going to work for a TV station, Aaron?

NeilHey Jamie - I agree completely - Shelly was venting more than reviewing.

Regarding the tricked out Mac pro vs. satellites, yes, it would make sense to go with a single machine, if the host apps could allocate a full 64-bit address space to Kontakt, etc, but from what I've read so far on the East West/Soundsonline forum, they can't (Logic included I think). That's only a matter of time though - just not sure when or how long it will be.

There may be a few other limitations to running a full blown orchestral lib a la VSL or EWQL Symphonic Platinum on a single machine, but we are getting closer no doubt. Such a rig would need at least 16G - 32 preferrably, so it's not a cheap move when there are working satellite systems already in place.

On the single quad - didn't even see that. Still a bit pricey compared to a single-quad, single socket PC (I'm guessing the MacPro motherboard is still a dual socket with a single quad - those boards are around \$400 I think, and the single Xeon is more than the conroe Quad, which I can get for \$300). For the difference with the Mac Pro, even at \$500, I would go dual quad. It's a difference of allocating a machine for samples, or video playback (which is hard to justify in the \$2k and up range), vs. buying a host

system. For a host though, dual quad would be the way to go, and I probably will this year. There the Mac prices are certainly competitive.... I just can't get Sequoia ported to Mac.....and my Adobe CS3 web suite that I need to manage my site has no platform crossgrade plan (pretty lame imho - probably the only company I know of that has either/or platform licensing).

The other issue for the time being is that Nuendo is running 10-15% faster on XP than Leopard. Hopefully that will change though. I'd love to have a 1:1 choice between them - then it comes down to fun and convenience. Mac wins there.

Btw - I really do admire Apple's attention to design, form and function and making products that do in fact set a high standard for the industry in general. It's really a great product line. Lovin' my iPod Touch.

Regards,
Dedric

Still here...
MartinHi James,

No intent to inflame or insult at all - let's try to be a little less sensitive and not read into PC users' posts.

See my other post to Jamie - I do think Apple makes a great line of products.

The conversation really detoured way too much from the original point, because, of course, you can argue anything, and we all tend to read from our own perspectives, not always understanding the intent of what we are replying to, and too often looking for an angle to refute the other's opinion.

Curiosity question: can you unlock an iPhone within Apple's license? i.e., I know it can be done, but Apple previously issued updates that reportedly wiped out 3rd party apps in an effort to plug that hole - have they recanted, or is it still the same as OSX - you "can" install it on any hardware, but you can't upgrade it since it violates the EULA. I might consider one at some point if it's truly open now.

Btw - I saw a super slim/mini wireless Mac keyboard at Best Buy - not too bad at \$79.

If I had a Mac, that would be a superb space saver esp. for studio use. My Logitech wireless is great and a real space saver, but not as small or thin. Really impressive - coolest mini keyboard with full sized keys I've seen - aluminum bed too so it seemed really solid, but with a great feel to the keys.

Thanks,
Dedric
