Deej,

Macro Express has prevented the need for screen drags for me.

Are you using that? It's worth it's weight in gold.

Tom

http://www.brainspawn.com/products/Akai_Quad_Comp_Compressor/Expander_VST_Plug-In

Anybody use it, any good, any thoughts?

<http://www.musiciansfriend.com/product/Akai-Quad-Comp-CompressorExpander-VST-PlugIn?sku=705596>

JamesNow that I'm back to using Paris again for summing and mixing stems from PTHD/DP/Logic, it dawned on me how much I love this platform in all it's no-longer-supported outdated glory.

It's kind of like a cuddly pet.. I feel all warm and fuzzy inside again.

Is that wrong?

Cheers,

TCDid ya notice the ParisEQ in the audio effects page?

allows multiple inputs to be sent to a single output.....drum bussing anyone????

I've got some serious experimenting to do here. This could be the beginning of something very cool if I can figure out how to get this program to work with mono busses and with external FX processors, though I can work around the external processor if need be. The demo is only allowing me to create stereo I/O busses but they are passing signal.....and they are passing signal with UAD-1 plugins installed and the latency is very low compared to running plugins directly in Paris. Also, all of the plugin presets are available .

The mono bussing will be critical for my situation. I'm sending an e-mail to their tech support right now. there's nothing that I can find in the manual so far.

Thanks man.....

;o)

Tell me...how do you fight at a Will Downing/Frankie Beverly & Maze show?
;-0

Tyronel think the problem is with service pack 2. from what i understand it
automatically throttles the bus speed down to S100 ,unless you tweak it a
little. RME tech support gives a work around for that issue. rme explains
in depth here :

<http://www.rme-audio.com/english/techinfo/fw800sp2.htm>

I dont know if this will work with other interfaces but it should.am i
wrong?

It's possible to route virtual instruments directly to Paris audio channels
and play in real time. Bye Bye needing Cubase as a VSi host in tracking
sessions.

Omigod, Lamont... look what you've started!

This week = DeeJ being excited about this new app, loving it in every regard, thrilling in it's versatility.

Next week = "Hmmm, I wish there was this ONE little other thing I could get it to do... I'm gonna try reconfiguring this a bit; I'll keep you guys posted."

Next week in some 4:00 in the morning post = "OK, after going through seventeen BSOD's in one night, seventy-five cups of coffee, and a divorce, I finally got this thing streaming at 576k, upconverting through three Lavry Blue DAC's in series, then crunching to 12-bit though a Fairlight CMI Series 1, paralleled with an EMT Plate reverb and back in through a set of ADC's a friend of mine made from a toaster (note if you're going to try this: the older, black bakelite toasters sound WAAAY better than the newer silverface stainless steel ones), I then tried using a "warming" circuit built from a magnetron tube out of a 1972 Amana microwave oven, and lo & behold, it's WORKING!!!"

(Five minutes later at 4:05am): "Damn, this #*&#%\$&^%^@ setup just started smoking & caught my Behringer Headphones on fire as I was trying some new mix techniques... or was it the headphones that caught the rig on fire - they ARE Behringers, after all? Anyway, it's a good thing that I'm pretty much a cueball up there, or else I'd feel like Michael Jackson in that Pepsi commercial. More later, I'm going to bed now - good thing Amy left me, or else I'd have to sleep on the couch, what with me smelling like a fireplace & all. Oh well, at least I have the dogs."

Later that same morning at 6:00 am = "ARGH! It's only 5:59 and already this is the day from hell! The dogs kicked me out of bed, I tried going out into the stable, thinking Amy had taken the horses with her & at least I'd have some peace & quiet there, but between the horses kicking me, the bears rummaging around in the trash bins outside, and this muthaf^%#king skunk that just HAD to make his presence known, I didn't sleep a

wink... well, off to the bathtub to soak in some peroxide & tomato juice to try & get this skunk smell off of me... I've got clients coming in at 10:00 for a mix session."

Next day in the afternoon = "Whew! Man, I am exhausted, 176 hours straight with no sleep, and with the problems I'm having with this rig, I don't think we got a viable mix down on ANY of their songs... because of the fire in the new PC, I went back to a Paris/Cubase mix matrix summed to a TASCAM Portastudio for that phat analog sound, and everything was going well until I tried to get the Portastudio sync'ed to a word clock - disaster... I was so sleepy that I didn't realize this was an impossibility... BTW, anyone know how to unwedge a BNC cable from an RCA audio-in jack once they've been super-glued to each other???"

:DOK.....here's the deal.....Forte is working as a standalone processor. The CPU latency is very low and I have a feeling I'll be able to make use of this plugin once I get my head around some of the more convoluted routing scenarios I have in mind. Thing is, if I have my tracks in Cubase Sx streaming direct to Paris, they are being processed at 32 bit float and since I'm not hitting the Cubase summing bus after processing them with UAD-1 plugins, they are not clipping and are HUGE when they hit the Paris ADAT inputs. This definitely ain't happening with Forte....at least with the demo. Lots of gain staging hoops need to be negotiated. It's nothing at all like the "Big" I get in Cubase. Still, the jury is out. I may decide to plonk down the \$\$\$ to buy it. Since I do very little midi in tracking sessions here, just the ease of patching this to Paris ADAT channels without having to deal with either the VSTi standalone app or Cubase SX as host will likely make it worth my while. I'm going to have to have a chat with these guys about a few things first.

DJ

WTF difference does it make? Even if it sucks, for ten bucks you get a nice doorstep (the box), and a coaster (the cd the software comes on).

Neil "Kris" . wrote:

You are, of course, assuming it is... I suspect that utter confidence in our present tools to measure everything may be as misguided as absolute trust in golden ears...

Just a thought.

> One thing I agree with Ethan about is that its the first 30dB or so that

A better room is most important. An exception is classical music where small signal stuff is vitally important, and the room you record in is likely to be quite decent already.

best,

DCThese are the blessings of a never boring life Neil (and Amy's still hanging in there, bless her heart.)
;o)

Actually....I'm getting a bit bored with trying to do what may be possible but is hitting the point of diminishing returns as far as the PITA factor is concerned.

I'm going to reconfigure a few projects to mix here in Cubase with 8 stems bussed to Paris submix 1 for summing. I think I can achieve the same mojo without all the convoluted voodoo routing between the two DAWs. If that's the case, I'll likely stop the madness. I'm gettin' kinda tired of this to be honest.

I've got one more experiment to try with Forte though. It may put this whole thing over the top. Stay tuned.

;o)
