-----=_NextPart_000_0027_01C80BF4.411D8AC0--Hi John,

Thanks for the support! I took a look at the eventiter code, and it already assumes 44.1 for its calculations, so unless you're working at 48k, a sample rate fix won't help the sound.

Does it get grainy just at high input volumes? I could probably add a input gain knob, if it doesn't already have one. I bought a copy of it back in the day, but I don't use that type of effect much, so I'm not that familiar with it.

I've been hacking DSP code regularly these days, but I still can't read most of it. I doubt I'd be able to improve the algorithm itself (at least not until I can figure out more of the ESP assembler syntax).

Let me know what you think.

Mike

>How about Django? He was a violinist and lost 5/8 of his left hand
fingers and switched to guitar. Good move for him!

I would go for the least removal option. If you practice a couple hours
a day you will be playing at your previous level in just a few weeks.

I pick with the reverse grip, similar to Benson, Dimeola. I am guessing
you are a conventional picker, resting the pick on the flat side of your
index? You could just switch to the "bird" giving finger if you had to.

I once learned to pick the conventional way in about a month, but then
realized it was not as good a method.

Yes, it's a big-assed bummer, but you will be fine and if you practice
hard you might even become a modern day Django! Just think of the press
release you can write for your next album, "Guitarist overcomes CANCER
to make greatest album of his career!"

That would be tacky & exploitive and an insult to all the people that have a serious type of cancer.
