512MB RAM and a pair of 5 meter DVI-D cables to hook them up. I was in a print shop earlier today and saw a 22" Dell wide screen running analog. It was very nice and detailed and a pair of these would have probably worked, but I think that having the bit of extra screen real estate is something I'll be glad I did. I really like the adjustability of these monitors. Being able to raise and lower them will really help the ergonomic mojo here.

In BIOS there is "SW Single Processor Mode - enable/disable" this forces the processor to run in single core mode, jus

David,  
So there's no real-time automatic mode? Maybe standalone on my Paris =  
comp  
is the way to go then. A friend of mine has the full blown version =  
around here.  
I'll have to get a demo from him. He loves it with Logic.

Is the polyphonic version as good quality as it gets? Worth the extra =  
cash?  
Tom

"EK Sound" <askme@nospam.com> wrote in message news:45c7b357@linux...  
Just to explain... the Melodyne plugin has to "record" the track from=  
the host first... in real time. Then you can manipulate the sound=  
during playback. One issue here... if you try to go back to the track =

(not that you need to) and make additional edits, these edits will=  
have to be recorded into Melodyne again. You would lose what work

One issue here... if you try to go back to the track (not that you need to) and make additional edits, these edits will have to be recorded into Melodyne again. You would lose what work you have already done. Rule of thumb is to make sure your edits are finished, "polish" with the Melodyne plug. David. Tom Bruhl wrote: Okay then via spdf to Cubase and back then? Realtime in auto mode anyway? I guess I'll have to render and drag over to Cubase for processing otherwise huh? I think I need another MEC now that I think of it. Good for another ADAT and SPDF with Paris/XP. I'll have to lose the last ADAT XT 20 for the rack space... Maybe 1.3 will do... I really like realtime everything. Poor old analog me
