Heat-related to the UAD card?

NeilWell, I thought about that one also. I tested by shutting down friday night
and opening the same project saturday afternoon, immediatly after turning
on for the 1st time. Still had the crackles, and they were just as bad. I
also opened another project with almost identical track count and plugs (used
the same template for both) that hadn't had problems....no problems.

Have you tried to change the cooling on the whole box (IE, have you opened the box and stuck a fan on it) yet?
Could be failing hardware, but it sounds like it's manifesting itself as aberrations in the memory writes. RAM, HDD's, CPU, power supply would all be suspect in that scenario. When's the last time you blew it all out with compressed air?

>Well, I tried to set up the 867MHz Quicksilver I just got with OS9 so
I can make it my mobile Paris rig.

Only, it appears that the damn thing will only boot from the OS9.2.2
cd that shipped with it, not retail 9.04 or 9.1 or anything else.

I got the G4 from work, and the only G4 discs I could find were the
original Panther dvd and the hardware test.

Anyone got a copy of the 9.2.2 boot cd they'd be willing to make me a
copy of?

I've got less than a month to get this thing all racked up and tested,
and tonight was more than a little irritating.

If'n y'all want to email me off-list, use pbraun AT ctgonline dot org.

Thanks.

pabCall Apple and tell them you have lost the original install discs. At one
time they would send out new disc for free. I don't know if that's the case
these days, but it's worth a try. It may cost you something now.

Deej,
Make 20 folders (2-3 minute songs right?) before session with the =
template already there.
Name them later. Open hit record go, save . Next.
Tom

------=_NextPart_000_0048_01C8205B.B31BB770--I'm fairly certain that w/ OS 9 you can just copy the system folder to your
boot drive and create an OS boot option. I have an 867 mHz G4 w/ OS 9.2.2 installed. I know I have my install disks somewhere but I'll bet I can just copy my system folder to a CD or DVD and send it to you. Email me if you want to give it a shot.

Gantt

I recorded/mixed/co-produced "The Sky Is Blue and Sometimes Cries" for my family's small label, Soona Songs. I think it's something special -- and so is Lisa Markley!

You can listen to samples here:
http://www.myspace.com/lisamarkley
http://www.soonasongs.com/store_lm2.php

The label has submitted it for a Grammy (Best Jazz Vocal Album), and it's made it through the first cut of nominees. We have our fingers crossed!

Thanks for reading/listening.

GrahamGood luck Graham! Keep us updated.

DC

Did you record it with Paris?

>GrahamIf it's a brand new band, you may not know all the I/O and channels you'll
use so then just record the first song, save it and then save as a new project.
 Open the NEW PROJECT, strip out all events and audio from the pool and
save that as a template. Then your template for THAT band will be ready
to go and you could even already have a bunch of folders made up in advance.
 Song1, Song2, etc...under the Cubase_Projects\punkers folder.Thanks DC. Actually it was done
with a Jim Williams-modified Alesis
HD24XR into Samplitude. Mixed in Samplitude.

Graham

---=_linux4730c3e1--I think everyone gets the point already...

So what would you suggest for someone recording a live show??? Can't
exactly stop between songs...

David.

I installed the UAD 4.6 software and all is working but I first=20
mistakenly installed the mono versions and the
stereo ones were not there. To correct I uninstalled the UAD software
and reinstalled it correctly without mono versions.

The problem now is after wrapping I have to click away all the missing
mono versions as Paris boots. I know Rod has the answer
for this one because it happened once before to me.

What do I need to do to get this back to it's good old self?

Thanks and almost there again!
Tom

------=_NextPart_000_005D_01C820C8.4DFEA060--Hi DJ,

I presume that without Paris you use the Cubase mixer to sum the
tracks and also the Cubase mixer Master 2-track out into your D/A
hardware. Have you found any loss of space/air/quality now Paris
is gone. It was said that Paris summing brought a spacious quality
to the mix etc ... (?) Using RME hardware one has the use of
TotalMix. Is there any advantage to taking individual Cubase mixer
tracks into TotalMix and summing there? TotalMix is s/w right? -
no mixing hardware on e.g. 9652s ... so it would be a question
of who has the best summing algorithms(?). I guess bottom line
is whether there is any advantage to using Paris as a summing
mixer to Cubase. TIA,

Regards,

Mic.Tom, there should be just 2 "missing" mono versions. the Farichild and the
EX-M whatever. You probably need to uninstall the UAD software and re-install,
only just select the stereo versions. THEN, re-install the UAD software to
a dummy folder, selecting to install the mono versions. After installation,
go to the dummy folder you created and copy/paste the Farichild and EX-M
mono versions (they're the only ones that don't have the word "mono" in parenthasis,
they have an "m")into the real UAD plugins folder, then run the fxpansion
wrapper. That should do it.
Rod

Rod,
So after this will the mono versions still be in the plugins list
in Paris? They're unneccessary right? No way of losing them
completely?

I just uninstalled and reinstalled the UAD software as the last step. =20
Should I do it again or just create the dummy folder etc. ? I had to=20
click away all the unfound mono versions of all the UAD plugs.

Thanks for the quick response,
Tom

"Rod Lincoln" <rlincoln@nospam.kc.rr.com> wrote in message =
news:4731413b$1@linux...

Tom, there should be just 2 "missing" mono versions. the Farichild and =
the
EX-M whatever. You probably need to uninstall the UAD software and =
re-install,
only just select the stereo versions. THEN, re-install the UAD =
software to
a dummy folder, selecting to install the mono versions. After =
installation,
go to the dummy folder you created and copy/paste the Farichild and =
EX-M
mono versions (they're the only ones that don't have the word "mono" =
in parenthasis,
they have an "m")into the real UAD plugins folder, then run the =
fxpansion
wrapper. That should do it.

OK, here's what I've done so far. G4 has two drives in it - I installed
Tiger on one. (Thinking that gives me some flexibility if I want to try
other recording stuff later).

I plan on installing 9.2.2 to the second drive, then using the "option" key
on boot to determine which way it boots.

I'm not sure that just initializing the second drive and copying the system folder onto it will allow that to happen -- but I could always try it. I'll just grab the system folder off my Paris rig in the basement.

However, just in case, I could still use a copy of a 9.2 boot disk. I'll try to get ahold of Ted today.Thanks. It's a Yamaha U1 upright from the mid 80's.

Graham

Ted Gerber wrote:

> TedOK guys, saw a STAGGERINGLY good band last night, Band of Horses. Two of the three(!) guitarists used Fender 8x10 cabs. I'm probably not going to shell out for that, but I've been thinking of running one of my 1x12 combox with a 10" speaker. Any strong opinions on great sounding 2x10 or 4x10 cabs and/or speakers to put in them? We're looking for clean to moderately gritty, no Linkin Park crunch here.

Thanks,

TCB

P.S. Neil, that Baby Bottle you sold me sounds damn fine on a Fender Deluxe.Oh, my deer!

erlilo wrote:

David.I've become a 12" speaker guy in my old age but I used to swear by Vibrolux and Super Reverbs. I recently subbed for a friend on a church worship band gig thru a '80's Paul Rivera Concert amp w/ 2-10" speakers and it sounded incredible.

Check out:

http://www.lopoline.com/home.html

I don't have personal experience with them, but they come highly recommended.So in laymans terms what does it do. Their site is past my afternoon attention
span.

>P.S. Neil, that Baby Bottle you sold me sounds damn fine on a Fender Deluxe.Assuming you find a speaker you really like, one 10 will sound
different than 2 and a lot different than 4. I would go 4x10
as a minimum if you want to get close to what you heard.

10's are fast, punchy, and clear. I love 'em.

Here's some options:

http://www.eminence.com/guitar.asp?speaker_size=10

Fane went BK after a big flood and were bought by another outfit and evidently will be back. These guys sell them:

http://www.loudspeakersplus.com/html/fane_10_12_guitar.html

Stay away from the alnico. Bought one. HATED it.

Several friends have told me that this guy has some of the best speakers out there today. He has them custom made by Weber and he also sells cabinets.

http://www.southbayampworks.com/speakers.html

there are a couple of 10's down the page a bit. His stuff is all "vintage marshall greenback" style.

These may be the best out there:

http://www.tonetubby.com/specs10c8.htm

Hempcones.

The URL above is for the ceramic version.
They also offer alnico-magnet speakers. I like ceramic a lot better, but the vintage guys like the way the alnicos crap out when you push them (when alnico magnets get warm the gauss goes down and they get weaker) Ceramic are clearer and cleaner and don't wimp out after an hour of hard playing.

TT also offers their speakers in cabinets.

http://www.tonetubby.com/cabinet.htm

The 4x10 with ceramic is 945. Not cheap, but better than the 1300 or so for alnico.

This guy builds beautiful cabinets:

http://www.stoneagecustomcabinets.com

And of course, there is always Jensen and Celestion. I haven't
used either in a while so I can't comment

It should work fine. Just dragging it over to a new disc automatically copies
it
there.

TedWell. after being as enthusiastic about both Logic and Apple, I have to say
both
are pooched right now. My G5 with 4 G Ram, and 500 gig HD has been running
slower and slower, (5 minutes to boot) and Logic will not play the simplest
2 track
project without freezing and announcing the dreaded "disc too slow" error.
None
of the other audio progs on the same box have a problem with this.

I've reloaded the system software, stripped out the plugins, cleaned out
the HD
of 40% of the stuff that was there, sent numerous crash reports to Apple
and

reinstalled Logic Studio (never had this problem with Logic 7 either). I've
also
read through the forums and found nothing that works, except possibly
wiping the HD clean and doing a fresh install of everything.

To add icing to the cake, I've waited on Applecare phone support for 45 minutes,
finally connecting with someone live, only to have him cut me off, sending
me back
to the start of the line!!

SheeshHi all,
UAD1 mono version do work in Paris !
Not with
FXpansion but you can use the FFX4 or the free effects chainer from Acon
digital.
I don't have any UAD1 anymore but I remember that mono version did work just
fine using LES dsp !
Regards,
Dimitrios

Thanks Rod,
Got the UAD plugs working and they're not popping up at Paris
startup anymore. Sweet! =20

Thanks so much for that fix. I have it documented now and won't forget.
Tom

"Dimitrios" <musurgio@otenet.gr> wrote in message =
news:47324d22$1@linux...

Hi all,
UAD1 mono version do work in Paris !
Not with=20
FXpansion but you can use the FFX4 or the free effects chainer from =
Acon
digital.
I don't have any UAD1 anymore but I remember that mono version did =
work just
fine using LES dsp !
Regards,
Dimitrios

I am trying to get an AMD 3000+ / 5 slot board to work
fully loaded with 1 UAD and 4 EDS cards. I've done
most of the Windows XP tweaks already.

In automatic mode at least one EDS ends up
with the graphics card. It works still but gets
rough with heavy projects. The UAD is sharing with=20
another EDS card too. I've learned that by setting
the BIOS to manual mode for IRQ PCI assignments
makes them all juggle themselves after switching
back to automatic assignment. It has been hit or miss.
It looks like slot three always shares with the video card
oddly enough. Slot one has the UAD purposely but it
never shares with the video card like I had hoped.

I've been getting some crackles too. I have to put a large
PS in there tomorrow night. It's struggling with a 300 watt
mongrel right now.

Can I insert the UAD in between the second and third EDS
cards with longer ribbon cables for the EDS connections? This=20
should insure the UAD sharing with the graphics card instead.=20

I am trying to get back up to full tilt here without a Magma
if at all possible. Any ideas of how to get this setup to play=20
nice fully loaded?
Thanks,
Tom

Thadster, glad that's working out for you... it's a really
great mic for certain things... there are mics that work "ok"
on lotsa stuff, and mics that are "killer" on certain things,
but just may not be right for others; the Baby Bottle is one of
those, IMO. It certainly pays off to have some of the former,
but it really rocks if you can have some of the latter, as well.

Male lead vox, too - give it a shot on that if you haven't
already!

>> TedTom,

I'd say you're on the right track with the idea of putting the UAD into slot 3. While slot1 sharing with video is a defacto standard, it's far from all encompassing. You'd have to check your MB manual, but it seems you have worked out the sharing slot already.

Manual BIOS assignments, in my experience, do not influence which card shares with the video. This appears to be hardwired on the motherboard itself.

You may be hard pushed to get all five slots usable, but I'd say attempting

this would be your best bet.

Cheers,
Kim.

within 5 seconds.

ChuckTom, in your particular configuration, the first thing I would
try would be to place the UAD card on PCI slot 1, and the EDS

cards in slots 2-5. Since the UAD is essentially a video card,
it would be less likely to cause conflicts with the (normally,
and sometimes un-adjustable) automatic assignment of the AGP
slot and PCI slot #1 to the same IRQ in your BIOS. Potential
problems could arise when either card (AGP or UAD) is under
heavy load - this is not my own experience, I must disclaim -
since I've never owned a UAD card - but is just more or less
based on my experience with IRQ conflicts in general.

I would start there & see how it goes.

the name "Stack of Horses" from a band name generator we found. We also
have 3 guitars. Hmmm. :)

I used to have a 90's Custom Vibrolux with 2x10s, but I was never very
fond of it... unfortunately that's the extent of my 10 experience.

Graham

TCB wrote:

just say
"OK let me get this set up" and then relocate to like five
seconds forward for a new filename & then say "awright.. check
tuning & nail it!" (or whatever)

Better than having each track on 16 songs become a gazillion-
megabyte file to begin with.

Well, dip me in batter and call me a corn dog!!

It was weird. I copied over the system,preferences, utilities, and
apps folder from my Paris G4 onto a fw drive.

Then I intialized the Paris boot drive, making sure to install OS9
drivers.

Then, copied said folders onto the newly-initialized drive.

Rebooted, holding down the option key.

Oddly enough, it showed not only the OSX drive, but the FW drive as

boot options, not the internal OS9 drive.

So, I let it boot from FW. Then went into the startup disk panel,
chose the internal Paris drive's System folder, restarted with the
Option key, and this time, the internal drive showed up and allowed me
to boot.

Now, I'll install Paris and a few utiilities.

Damn! That was fun. And edumacational, too!!!

Congrats - here's hoping!!!!

pabSounds like the system drive is failing. I would replace it, reinstall and
go from there - at worst, it wasn't a bad drive and you end up with a spare
500G data drive (I assume you already have a secondary drive for audio).

That might be cheaper than waiting for Apple Care support and getting a
"reinstall Logic" or "rebuild the desktop" answer.

Other Mac guys might have more ideas.

Regards,
Dedric

Kim and Neil,
Neil, I know that the 3rd PCI slot shares with AGP on
this particular mobo. Odd but true. I have it set up just
as you suggested at this time. Slot 1 is the UAD and 2-5=20
are the EDS cards.

The big question is can I use longer ribbon cables to connect
across the UAD in slot 3 with EDS cards in 1,2, 4 and 5?
Do the EDS cards care about being in adjacent slots?
Thanks for your tips guys,
Tom

"Neil" <OIU@OIU.com> wrote in message news:473283ac$1@linux...

Tom, in your particular configuration, the first thing I would
try would be to place the UAD card on PCI slot 1, and the EDS
cards in slots 2-5. Since the UAD is essentially a video card,
it would be less likely to cause conflicts with the (normally,
and sometimes un-adjustable) automatic assignment of the AGP
slot and PCI slot #1 to the same IRQ in your BIOS. Potential
problems could arise when either card (AGP or UAD) is under
heavy load - this is not my own experience, I must disclaim -
since I've never owned a UAD card - but is just more or less
based on my experience with IRQ conflicts in general.

I would start there & see how it goes.

Neil

BLOCKQUOTE></BODY></HTML>

------=_NextPart_000_019B_01C82196.94E92EE0--Tom... I always had them (the EDS cards) in adjacent slots, so
I can't say for sure if the non-adjacency will make a
difference - my gut tells me the IRQ sequence & lack of
conflicts is more important therein. I don't believe the cable
lengths could make any difference, as long as they're the same
from card to card (IOW, back & forth)... a few samples of
lightspeed latency could be the worst penalty there, which in
the grand scheme of things is nothing, really.

>I would love an iPhone, but not as long as they are locked to AT&T. Verizon
has been good so far for us.

I'm also not too enthusiastic about another device with a battery that would

require a service center to replace it (my wife's Palm has such a battery,
and to replace it would cost $60 plus the battery - the Palm only costs $99
new.... guess the Palm will eventually die when the battery does).

Gotta say, the whole "battery service plan" idea has only one reason: more
profit, just like car manufacturers and the parts business.

Dedric

The 5 slot boards that I'm familiar with (ASUS A8V-Dlx and gigabyte =
GA-K8NS Ultra 939) have unfriendly IRQ sharing with the AGP on all but =
slots 2 and 4. this is why I use a pair of 13 slot Magmas. You can get 4 =
UAD-1's on a single IRQ on slot 2 of the mobo if you insert the cards in =
certain Magma PCI slots and you can get 4 more (whatever) cards on a =
different friendly IRQ with the other 13 slot Magma.

Sorry to have to tell you that. I doubt if it's something you wanted to =
hear.

You may have better luck with UAD-1 and EDS cards though. I never had =
problems with them sharing IRQ.

  "Tom Bruhl" <arpegio@comcast.net> wrote in message =
news:47327eca@linux...
  I am trying to get an AMD 3000+ / 5 slot board to work
  fully loaded with 1 UAD and 4 EDS cards. I've done
  most of the Windows XP tweaks already.

  In automatic mode at least one EDS ends up
  with the graphics card. It works still but gets
  rough with heavy projects. The UAD is sharing with=20

another EDS card too. I've learned that by setting
the BIOS to manual mode for IRQ PCI assignments
makes them all juggle themselves after switching
back to automatic assignment. It has been hit or miss.
It looks like slot three always shares with the video card
oddly enough. Slot one has the UAD purposely but it
never shares with the video card like I had hoped.

I've been getting some crackles too. I have to put a large
PS in there tomorrow night. It's struggling with a 300 watt
mongrel right now.

Can I insert the UAD in between the second and third EDS
cards with longer ribbon cables for the EDS connections? This=20
should insure the UAD sharing with the graphics card instead.=20

I am trying to get back up to full tilt here without a Magma
if at all possible. Any ideas of how to get this setup to play=20
nice fully loaded?
Thanks,
Tom

I choose Polesoft Lockspam to fight spam, and you?

------=_NextPart_000_0086_01C82188.B818C8C0--Tom,

I am sure the longer cables will be fine given:

(*) The length of cables between slot 2 and 4 (skipping 3) will be far less
than the cable you currently have going from 5 to 2, or the one you will
have going from 5 to 1. The longest cable would be most likely to cause trouble,
and the percentage difference between skipping 4 vs 5 PCI slots is fairly
minimal. People have had 8 cards in a system, so they must go that far.

(*) I haven't heard of cable length being a problem before

(*) The cards are 33MHz PCI, and designed in 96 or so. Cable length usually
comes down to either impedance/inductance or just the time taken to travel
that distance. I can't see either being a problem in these cards.

I'd give it a shot. :o)

Cheers,
Kim.

I'll give the UAD in the middle of the pack a shot if I
can't get the UAD to share with the video card any other way.

Thanks guys,
Tom
 "DJ" <animix _ at _ animas _ dot _ net> wrote in message =

 The 5 slot boards that I'm familiar with (ASUS A8V-Dlx and gigabyte =
GA-K8NS Ultra 939) have unfriendly IRQ sharing with the AGP on all but =
slots 2 and 4. this is why I use a pair of 13 slot Magmas. You can get 4 =
UAD-1's on a single IRQ on slot 2 of the mobo if you insert the cards in =
certain Magma PCI slots and you can get 4 more (whatever) cards on a =
different friendly IRQ with the other 13 slot Magma.

 Sorry to have to tell you that. I doubt if it's something you wanted =
to hear.

 You may have better luck with UAD-1 and EDS cards though. I never had =
problems with them sharing IRQ.

news:47327eca@linux...
  I am trying to get an AMD 3000+ / 5 slot board to work
  fully loaded with 1 UAD and 4 EDS cards. I've done
  most of the Windows XP tweaks already.

  In automatic mode at least one EDS ends up
  with the graphics card. It works still but gets
  rough with heavy projects. The UAD is sharing with=20
  another EDS card too. I've learned that by setting

the BIOS to manual mode for IRQ PCI assignments
makes them all juggle themselves after switching
back to automatic assignment. It has been hit or miss.
It looks like slot three always shares with the video card
oddly enough. Slot one has the UAD purposely but it
never shares with the video card like I had hoped.

I've been getting some crackles too. I have to put a large
PS in there tomorrow night. It's struggling with a 300 watt
mongrel right now.

Can I insert the UAD in between the second and third EDS
cards with longer ribbon cables for the EDS connections? This=20
should insure the UAD sharing with the graphics card instead.=20

I am trying to get back up to full tilt here without a Magma
if at all possible. Any ideas of how to get this setup to play=20
nice fully loaded?
Thanks,
Tom

Got it!

Slot #2 shares with AGP so it ended up being=20
slot one Master EDS card, slot 2 UAD-1, slots 3-5
EDS 2,3 and 4. I am getting some nasty crackling
on one of the heavier projects. Paris is more responsive
though. Screens are drawing without stuttering audio
like when the EDS was sharing with AGP. I hope the
crackling is not the UAD sharing with AGP syndrome.

I'll check tomorrow when I'm awake again. I'll swap a heafty
power supply to see if that cures the problem. Session at 2:00.
Tom

news:47327eca@linux...
I am trying to get an AMD 3000+ / 5 slot board to work
fully loaded with 1 UAD and 4 EDS cards. I've done
most of the Windows XP tweaks already.

In automatic mode at least one EDS ends up
with the graphics card. It works still but gets
rough with heavy projects. The UAD is sharing with=20
another EDS card too. I've learned that by setting
the BIOS to manual mode for IRQ PCI assignments
makes them all juggle themselves after switching
back to automatic assignment. It has been hit or miss.
It looks like slot three always shares with the video card
oddly enough. Slot one has the UAD purposely but it
never shares with the video card like I had hoped.

I've been getting some crackles too. I have to put a large
PS in there tomorrow night. It's struggling with a 300 watt
mongrel right now.

Can I insert the UAD in between the second and third EDS
cards with longer ribbon cables for the EDS connections? This=20

should insure the UAD sharing with the graphics card instead.=20

I am trying to get back up to full tilt here without a Magma
if at all possible. Any ideas of how to get this setup to play=20
nice fully loaded?
Thanks,
Tom

if you're running leopard i don't think the motu gear works with it at
the moment.

I'm still on Tiger. Leopard is just sitting in his box in the corner, waiting
to
strike...

I got through to Applecare, and after an hour, the guy, who made a good effort,
decided to have a Logic expert call me back within 48 hrs. I have the feeling
it's
something up with the Drive. It's a PPC, not an Intel, about 2 years old,
and the
reseller set up two 250 G drives as a striped Raid. He did this for FCP and
that still
works OK (not great like it did, but OK). There is no separate boot drive,
which
goes against standard practice. The other relevant symptom, is that things
are
performing _slightly_ better when first booting up, and the system isn't
too hot.

I read on the Logic Forum last night an Apple guy actually telling one of
the users
to dump his G5 PPC because of "anticipated" cooling system failure. That's
nice.
I'll wait for the Logic expert to call, and then talk to my supplier.

Thanks again.

the 40+ parameters when I did my interface, and now that I've added it in,
the thing doesn't want to load anymore.

I take back what I said about Matt's reverb. I think his prowess may be
necessary.

Cheers!

MikeMike,

I was gonna tell you that he worked on it for almost a year, it had major nasty bugs and bluescreened and stuff for a long time. It was stable in the end, and the presets give you the equiv of a DP/Pro verb. Plus the gui he did is slamming. Since I haven't heard from him in over two years I figure it might be ok to go ahead and let it out.

performance 12 times (different projects) you're going to be a very old man
by the time it gets done. though after you copy the first one you could
just copy the project folders in windows explorer for a small speed improvement.
  I'll bet copying just one will take over 30 mins.

johnHi John,

When you do a save as, you don't have to copy the media with the project.
 That's a minor detail I left out :-)

To sum up, an iPhone owner should be able to subscribe to the carrier of
their choice, expect a reliable network and be allowed to purchase and install
a new battery when the old one dies. That all sounds reasonable to me, practical
usability :-)

>Two of the three singers in the Monx (one of them being me) are using the
BB for all of our lead vox. The third singer has a much thinner, reedier
voice and we still haven't settled on a mic for him yet. I'm not convinced
the BB is the right one for him, but we'll keep on looking.

I use really low wattage amps and don't use a ton of volume so I can throw
pretty much all of my mics on the amps I use. I've been having a ball moving
things around and trying all of the various combinations to get what I want
out of my amps. Guitars are probably the most fun for me to record because

the other guys are out of the room and I just set up the Langevin pre, put
all of the mics on stands and play around until I hear something I really
like. I'm so familiar with the was Cubase works that all of that is as transparent
as cellophane. The only danger is sometimes I screw around TOO much and don't
get enough done.

I've always wondered what compels companies (not just Apple in this case) to limit choices (carrier), expandability/longevity at low cost (user-replaceable batteries, etc). Are they really making that much more profit on repairs and an exclusive contract with a 3rd party (AT&T)?

I know AT&T is making money off of this, and Apple is getting a cut of AT&T's fees, but hasn't history proven that flexibility opens the market to more customers, or am I dreaming?

>ahhh, that's a good ideaOK, audio snobs, question for you. In the 'studio' where we're recording now
we have a slew of various mixers, audio interfaces, and other recording detritus.
For various reasons of routing, and especially monitoring with multiple speakers,
the easiest device to use would be an original MOTU 828 for monitoring and
line level converters, I'm using outboard pres for everything. All tracks
are being done at 44.1.

The other options are a Presonus firewire interface which would be a slightly
greater pain in the ass, and with a little money splashed around an original
Multiface I have lying about and a PCI card (which I'd have to buy). Remember,
we're just talking line level converters and monitoring. Opinions?

TCBGreat Chuck !!
And if he comes back we will donate for that !!
We are all waiting for this reverb release !

Get the multiface running... and use a passive volume control for
monitor levels.

David.

What do you want the mic to do? Emphasize that thin/reediness,
or are you trying to thicken his voice up a bit? If it's the
former, consider a Bluebird, if it's the latter, try an RE-20!
(Just throwing out a couple of ideas in the $500-ish price
range). The preamp, of course will make a difference, but those
are some good starting points. Or you could use that
Claytor-67 & get him in close for the proximity effect to
fatten him up a bit.

NeilWhile I have not used the 828 personally, I know people here in town
that have replaced them due to mediocre converters. And yes, you SHOULD
use the best convertors possible for for monitoring! :-)

David.

>Greetings Parisians!

I realize I've been asking a lot of questions lately, but let me explain
a few things before the next one. First, my own home studio is quite nice.
I have a very fast computer, tons of great software, RME converters, a Creamware
SCOPE Pro card, the Focusrite Liquid Mix, a Prophet 10, scads of guitars,
even some nice outboard effects. My Adam A7 monitors are on high quality
stands exactly equidistant from both my perky little ears and the subwoofer
I got with them. I have pretty clean power (paid an electrician out of pocket
to do what he could to get the circuit my gear runs off of in the best shape
possible for an apartment dweller), I use short, high quality cable runs
and have done both formal and informal (move the couch) room treatment so
I'm confident it's about as good as the room can be. Even my turntables are
Technics 1200 MkIIs, my DJ mixer is top notch, and the leather office chair
with casters on it is comfy as all hell.

However, most of the questions I'm asking are about the space where I'm recording
the Monkies. This 'studio' happens to also be our 'practice space' which
is a very nice way to say it's a storage room off of a three car garage in
suburban CT. The owner of said garage is the bassist and one of the songwriters
in the band. We've done some things to the room to try to improve its acoustics
a bit but it's small, rectangular, with low ceilings, and occasionally just
a nightmare. Said owner also has three children and a mortgage and thus a
very limited budget for audio equipment/upgrades. Thus we are tracking to
Cubase SX 2.something on a Mac G4 that is so old I think it has tubes in
it, and not for sonic effect. The monitors are so horrifically bad I won't
even tell you what they are and they're stuffed into corners about seven

feet from the 'mix position' which is a polite way to say 'where you stand
in front of the computer.' I brought out my KRK V6s that I use as my 'let's
see what this will sound like on a boom box' speakers and put them about
18 inches apart on another table to give myself half a chance of monitoring.
Until I scrounged up a flat panel monitor we had to turn the gigantic 17"
Apple CRT monitor off when we were recording guitars to keep noise/hum under
control. On top of all of this, two of his kids are teenage boys who play
in more than one band and might break nearly anything I leave there that
can possibly be broken.

So then, when I ask something like 'is it OK to use an 828 to monitor' I'm
asking that within the context of degrading my own home setup if I want to
use something else, risking teenage related breakage, and a setup already
with a number of fairly week links already in the various chains. I don't
need to be told what's ideal, I know that answer, I just want to find out
if people have any real world experience.

Moving on to my actual question. One thing I've done to safeguard my gear
against punk rock related damage is this; the owner and I put a hasp and
a padlock on a cabinet in the garage where I've been storing my mics/pres/snakes/Moog
pedals/Peterson Strobostomp/etc. Now then, this garage should never actually
freeze, but it's getting colder and colder here in the great Northeast, and
the garage is getting colder as well. How cold can a mic get before it's
a problem, and how long--if at all--do I need to wait to let a mic warm up
before turning it on and giving it phantom power? What if we get a really
bad cold snap and the temp does get below freezing? That sounds bad to me,
even if it's just condensation as the mics thaw.

I know these are real 'ghetto recording' questions and I'll be happy when
I can be back in my room mixing and sipping wine and talking to my cats.
But I still need to ask, it's what we'll have to deal with.

Thanks,

TCBGotcha. If you enjoy some schadenfreude, read my most recent post.

Your main concern here is "condesation". When something really cold is exposed to warmer air, you get condensation on, and in, said item. This can be hazardous for electronics. I would recommend at least 45 minutes to allow for the condensation to dissapate... even longer if the region is prone to high humidity in cold temps.

David.

I managed to get an afternoon off, and I got the reverb working!

Unfortunately, my GUI is horrible and I have no presets. I couldn't find
a way to get multiple pages working with the radio button on a standard layout
page. If you've got any tips, I would really appreciate your help. :)

As for the DP Pro, as far as I can tell from the manual, the "Big Verb" is
actually a slightly different algorithm than the verbs in the DP PRO. The
Big Verb has no modulation parameters, and the Expert Verbs do. The Big
Verb also has the 16 stereo predelays that the Expert Verb doesn't have.
 It would be ultra cool if Matt actually decompiled and modified the Big

Reverb to make a clone of the DP Pro algo.

Let me know if you have any tips for the radio button/ multi page difficulty I find myself in.

For what it's worth, the crashes seem to have been from a faulty indexing scheme.

All the best!

Mike

>Hi Mike,

The "big verb" is a different animal from what I'm talking about. Matt ported two DP/Pro verbs directly from the DP/Pro ESP2 source, wrote UIs and translated the presets from the original DP/Pro preset files. The originals phase cancel with the Paris versions when used on the same audio files, and same presets.

The verbs matt did definitely have the modulation.

Is there any way I could get any of the additional DP/PRO source?

All the best,

Mike

Thad,
I'd take the mics home with me. They're not heavy and perishable.
Tom

Solved the crackling.

Heat is bad.=20
Fans are good.

Tom

 "Tom Bruhl" <arpegio@comcast.net> wrote in message =
news:4732c438@linux...
 Got it!

 Slot #2 shares with AGP so it ended up being=20
 slot one Master EDS card, slot 2 UAD-1, slots 3-5
 EDS 2,3 and 4. I am getting some nasty crackling
 on one of the heavier projects. Paris is more responsive

though. Screens are drawing without stuttering audio
like when the EDS was sharing with AGP. I hope the
crackling is not the UAD sharing with AGP syndrome.

I'll check tomorrow when I'm awake again. I'll swap a heafty
power supply to see if that cures the problem. Session at 2:00.
Tom

"Tom Bruhl" <arpegio@comcast.net> wrote in message =

I'll give the UAD in the middle of the pack a shot if I
can't get the UAD to share with the video card any other way.

Thanks guys,
Tom
"DJ" <animix _ at _ animas _ dot _ net> wrote in message =
news:473297f6$1@linux...
The 5 slot boards that I'm familiar with (ASUS A8V-Dlx and =
gigabyte GA-K8NS Ultra 939) have unfriendly IRQ sharing with the AGP on =
all but slots 2 and 4. this is why I use a pair of 13 slot Magmas. You =
can get 4 UAD-1's on a single IRQ on slot 2 of the mobo if you insert =
the cards in certain Magma PCI slots and you can get 4 more (whatever) =
cards on a different friendly IRQ with the other 13 slot Magma.

Sorry to have to tell you that. I doubt if it's something you =
wanted to hear.

You may have better luck with UAD-1 and EDS cards though. I never =
had problems with them sharing IRQ.

"Tom Bruhl" <arpegio@comcast.net> wrote in message =
news:47327eca@linux...
I am trying to get an AMD 3000+ / 5 slot board to work
fully loaded with 1 UAD and 4 EDS cards. I've done
most of the Windows XP tweaks already.

In automatic mode at least one EDS ends up
with the graphics card. It works still but gets
rough with heavy projects. The UAD is sharing with=20
another EDS card too. I've learned that by setting
the BIOS to manual mode for IRQ PCI assignments
makes them all juggle themselves after switching
back to automatic assignment. It has been hit or miss.
It looks like slot three always shares with the video card

oddly enough. Slot one has the UAD purposely but it
never shares with the video card like I had hoped.

I've been getting some crackles too. I have to put a large
PS in there tomorrow night. It's struggling with a 300 watt
mongrel right now.

Can I insert the UAD in between the second and third EDS
cards with longer ribbon cables for the EDS connections? This=20
should insure the UAD sharing with the graphics card instead.=20

I am trying to get back up to full tilt here without a Magma
if at all possible. Any ideas of how to get this setup to play=20
nice fully loaded?
Thanks,
Tom

>I thought I would share with you some of the things I learned in my first
Windows Vista experience.

Firstly, the basic OS layout seems quite similar to XP and previous Windows versions. Some things have been graphically shunted around, but conceptually the menus appeared to be very similar in content. The "Start" button is now just a ball with a Windows logo on it, but you know what it is from its location at the bottom left. Other things have changed in a similar way. Clicking on this "Start" button, which I presume may have a new name as the word "Start" is now absent, brings up a menu which includes what I think is a fairly nifty scrolling window, in which your "All Programs" menu appears. Hence "All Programs" is always visable, and doesn't branch off across your main monitor like it used to. It's another of the apparently many gui changes which appear to have been designed fairly well in terms of improving functionality while having a fairly easy learning curve. At this end the OS is nice it seems.

And then you use it. ;o)

Even if you haven't seen the Mac ads, I'm sure you have heard somebody talk about...

"An unauthorised program is attempting yada yada - Allow / Decline"

Well, welcome to the future.

I wasn't surprised to get this program when installing software. I had been warned, and although my mouse click on install was just a fraction of a second before the Allow / Decline prompt, bringing forth questions as to how quickly doubt can occur about such things, I accepted that you don't install software all that often, and being very system critical it doesn't hurt to double check.

It was a couple of minutes later when I became apparent that people weren't kidding.

While I was dismayed when the USB stick, which I had just removed from an XP machine which confirmed files onboard, showed up, but was reported as empty. That was odd. Removing it, rechecking the files in XP, and then putting it back, did, for whatever reason, cause Vista to display the files.

One of them was a ZIP file, and I needed to copy some stuff from the ZIP file to an area where it would no longer be zipped. Initially it was about 1.5MB worth of stuff.

Select.

Copy.

Paste.

An unauthorised program is attempting to...

....huh?

Which program? Windows Vista itself? It seemed so. A simple file copy, admittedly from a compressed archive, was sufficient to claim that authorisation was required.

Allow.

Now copying 1.5 meg.
Estimated time remaining: 2 minutes 13 seconds.
Speed: 8.2KB/sec

1.5Meg will take over two minutes? We're getting 8.2KB on a 480,000KB bus? Even USB 1 is 10,000KB. Nice.

And it didn't disappoint. It really did use the whole 2 minutes.

A later file copy of just over 4 meg achieved a speed of about 70KB/sec, nearly 10 times faster, and only about 7,000 times slower than expected (literally).

It is, it seems, appropriate, for your own security, that you are inflicted with constant, annoying, inconvenient checks and tests. It's for your safety. Sorry sir. Do you have a bomb? You'll have to take your clothes off while I put on this glove...

....it's for your own safety...

....because all of us...

....would prefer...

....a glove an hour...

....to a bomb that rarely occurs...

Welcome to Windows Fista. The future is more paranoid than ever. The bad guys will never get us. They can't annoy us. No they can't.

Cheers,
Kim.Sorry Bill, didn't mean to offend.

Never mind.

ROFL! good one.

Yeah, DRM to the max, and now this. Looks like the end of the
road for Windoze DAW's was XP - after our current rigs are no

longer viable, it's gonna have to be PT on a Mac, I'm sure.

NeilSorry to hear Ted. We have Logic Studio up and running great at the Church studio(s) on 3 Mac G5's and 1 Mac book Pro. The Mac Book pro even has Leopard installed.

Another Buddy has Logic *(Studio) on a New Mac Pro ..Blazzing!!

Solved the crackling.

Heat is bad.=20
Fans are good.

Tom

"Tom Bruhl" <arpegio@comcast.net> wrote in message =
news:4732c438@linux...
Got it!

Slot #2 shares with AGP so it ended up being=20
slot one Master EDS card, slot 2 UAD-1, slots 3-5
EDS 2,3 and 4. I am getting some nasty crackling
on one of the heavier projects. Paris is more responsive
though. Screens are drawing without stuttering audio
like when the EDS was sharing with AGP. I hope the
crackling is not the UAD sharing with AGP syndrome.

I'll check tomorrow when I'm awake again. I'll swap a heafty
power supply to see if that cures the problem. Session at 2:00.

I am trying to get an AMD 3000+ / 5 slot board to work
fully loaded with 1 UAD and 4 EDS cards. I've done
most of the Windows XP tweaks already.

In automatic mode at least one EDS ends up
with the graphics card. It works still but gets
rough with heavy projects. The UAD is sharing with=20
another EDS card too. I've learned that by setting
the BIOS to manual mode for IRQ PCI assignments
makes them all juggle themselves after switching
back to automatic assignment. It has been hit or miss.
It looks like slot three always shares with the video card
oddly enough. Slot one has the UAD purposely but it
never shares with the video card like I had hoped.

I've been getting some crackles too. I have to put a large
PS in there tomorrow night. It's struggling with a 300 watt
mongrel right now.

Can I insert the UAD in between the second and third EDS
cards with longer ribbon cables for the EDS connections? This =

should insure the UAD sharing with the graphics card instead.=20

I am trying to get back up to full tilt here without a Magma
if at all possible. Any ideas of how to get this setup to =
play=20
nice fully loaded?
Thanks,
Tom

Kewl - then if that's what you're going for, consider also
pairing it with a preamp that's a bit "slower", if you know
what I mean... that'll tend to emphasize the low-end harmonics
even more. Make it more "glue-y", so to speak. :) I don't
know which preamps you have so, I can't make a specific
recommendation, but I think you get the idea. Slower or perhaps
even "woolier" would be good.

>>As I said in another post, sorry to lean on y'all.

Why are you apologizing for that? That's the whole point of
this group!

Oh, and BTW, re: your mics... get some silica gel packets &
store your mics with one in each mic box. Under your conditions
as described, I'd probably use them for the dynamics, as well,
though normally you mainly have to worry about condensor mics
in that regard, it sounds like your practice/recording place
might be subject to some pretty harsh climatic shifts (i.e.
warm when you guys are in there, well below zero when you're
not). Taking your mics home like Tom suggested ain't a bad idea,
either, and would probably be my choice - heck, if you're
boxing them up each time, how hard is it to then toss the boxes
in a milk crate/bigger box/whatever?

And finally, if you EVER have to leave them set up on
stands 'til next session, stick a ziplock bag over the mic with
a silica gel pak taped to the inside of the bag, zip it almost
tightly closed around the mic or mic/mount/stand - IOW, enough
to keep dust out, but not keep all the humidity in; the gel pak
will take care of the rest.

Your USB stick worked? Vista says it can't find drivers for any of mine -
I've tried three; also tried a Logitech webcam that has it's own drivers
that Vista can't find, even when I point directly to them. It randomly
shuts off my USB audio interface for some apps and either mutes it, uses it
for the system, but not apps, or vice versa, or somewhere in the middle....
you get the idea.... yep, when I have time, Vista's getting punted for
Ubuntu, or a Macbook.

> Welcome to Windows Fista. The future is more paranoid than ever. The bad
> guys will never get us. They can't annoy us. No they can't.

"...and we'll shut out the good guys, and pretty much anything you might do
on a computer too.... just in case...."

I turned all of the security crap off on my laptop, but apparently without
it, Vista is as blind as a bat at noon on Venus.

Ya and the stuttering audio was because Macro Express was
messing with the undos in the editor instead of changing submixes.
I am changing to a super power supply, a coupla fans then try to get
the Mec situation sussed out.

It is rockin' the house again!

Got it!

Slot #2 shares with AGP so it ended up being=20
slot one Master EDS card, slot 2 UAD-1, slots 3-5
EDS 2,3 and 4. I am getting some nasty crackling
on one of the heavier projects. Paris is more responsive
though. Screens are drawing without stuttering audio
like when the EDS was sharing with AGP. I hope the

crackling is not the UAD sharing with AGP syndrome.

I'll check tomorrow when I'm awake again. I'll swap a heafty
power supply to see if that cures the problem. Session at 2:00.

------=_NextPart_000_02FC_01C82269.D422A590-->I turned all of the security crap off on my
laptop, but apparently without
>it, Vista is as blind as a bat at noon on Venus.

So you can turn it off? Perhaps if they fix this feature the OS might be
usable. I assume driver issues will be fixed in time, as that clearly can't
go on, but this super security really is more than silly.

>"Windows Vista - ensuring the future for OSX and Linux."

Despite the Simpson's quote, this one actually isn't funny because it definitely
seems to be true.

I seriously find it close to unfathomable that they could release something

like this and think, it seems, that it will be successful. Why in the world would you deliberately design an OS to annoy the daylights out of you? Have the designers not used it? Have they not gone "Gee, this is annoying?". Are they such uber geeks that they think the more buttons you are forced to push the more fun it is?

I simply cannot fathom, no matter how I look at it, how a massive team of computer experts have gone this way. We've all heard reports of M$ employees disagreeing with much of Vista's design, so I presume that someone high up, Bill among others, have forced this as the direction, but why?

I'm guessing that it is possible to make the OS tolerable by deactivating hyper-security mode, assuming you have direct access to M$ support. Ignoring the constant stabbing pain in my soul caused by the incessant issues and prompts, the OS may be an improvement in some respects, but it sure has a long way to go.

My home Paris box runs an XP partition and a Ubuntu partition now. I like Ubuntu, though Linux still has some serious usability drawbacks if you push technology at all. Even simple things like wireless security are very sketchy if you expect a simple up and go GUI rather than 4 hours reading advice on editing your configuration files in a text editor, which surprised the daylights out of me. I spent hours trying to find info which I was confident would allow me to get WPA working. It was clear that the job was large enough that I shouldn't start unless I was confident it would work, and I was unable to google a sufficiently confidence inducing explanation of the required changes. I ended up back on WEP, wondering why it is that some smart programming cookie hasn't gone "Ya know, I could almost make a gui for this quicker than I can manually make the changes".

Still, such issues will be solved in time, and not that much time I imagine, as high-annoyance issues on Ubuntu are actually not all that common. When you hit one it can waste hours, but general workflow in the OS is pretty smooth, and indeed I am surprised constantly by how much smoother than XP in can be on occasion. Little things like plugging in a printer, camera, or MP3 player, are almost always totally automated and you're up in seconds, with all the functionality you do want, and none of the garbage you don't. Aside from being highly configurable, the GUI can be totally replaced with multiple options. I'm still coming to terms with the location of system files, which I think is laid out in a very "geek" fashion and, quite frankly, probably only makes any sense if you understand the internals of Unix/Linux, which I have no desire to ever do.

I have a spare HDD partition with some 100+GB of space which might soon gain the label "MacOS" when I get a spare weekend to google around for the Intel version and check if it's going to sit OK with my hardware. And I'm quite willing to pay for it. I wonder how they would go taking you to court because you're running something you legally own on hardware they don't like. ;o)

We do appear suspiciously close to the end of an era in terms of Windows popularity though. DRM is another thing of course, which apparently is going to infiltrate all legally available OS's. I think we all know the Linux community will fight this fairly hard, and it seems unlikely to me that you won't, at least, be able to hack DRM from Linux with relative ease for a long time to come.

If not, it's not impossible that the OS's of the next couple of years will still be in use for decades, as the final OS's capable of "getting the job done".

Cheers,
Kim.Cobra was the code name for the DP/Pro. I forget what hornet was.

>the problem relates to Vista making thumbnails of files, and trying to continue
making them even when you have told it to delete a file, its not a transfer
speed problem, and can be VERY easily stop gapped by disabling thumbnail
views in the folder view settings :)

http://it.slashdot.org/article.pl?sid=07/03/27/038227I believe Vista have a long way to go when thinking of how many years
we have payed to be betatesters for all kind of commercial
software;-(.
By the way, after nearly a year in use, I see the Service Pack One are
on its way for Vista. After that, it's time to wait for Service Pack
Two etc., etc., etc.....;-)
....So, maybe I think I'm old enough to have learned to wait a year or
two before a new product is new for me...
....By the way, I buied Adobe Audition 3 today...
....and it's brand new today...
....I saw something written about it a month ago and wanted to own it
after owning each version from CoolEditPro...

....So where have my logic mind gone???...

....and I looked at this "new" homesite too yesterday:

http://www.intelligentdevices.com/

The only word I don't like to see here is the word "SOON"!!!!
It will be show to see how far away the word "soon" will be here;-)

>Kim.The wireless issues are a function of the hardware manufacturers, not Ubuntu or Debain (it's upstream, far geekier parent). If you want to do something about it you should talk to the people who make your wireless card and tell them to open their hardware enough so drivers can be written. Trust me, they will be done within days.

Also, WEP/WAP is a joke. When my DSL line goes down I break into someone else's 'secure' wireless network to check my email. It takes me five minutes unless they are doing MAC address filtering, which actually does help a lot.

Pretty much all of the config files for Ubuntu (and nearly all *nix OSs) are in /etc somewhere. Once you're used to using them you'll never miss a confusing GUI config tool again, I promise.

Good luck, the Ubuntu forums are excellent and very newbie friendly. The Debian community is more technical but full of cranky old geeks who mock at you when you don't get their jokes written in hex.

makes it better than say, Finale?

I haven't tried that Wildcat program yet... I got involved in something else...
and I see that Sibelius 5 is $499. Not sure I want to spend that much unless
I know it is going to take me into another freakin dimension! In fact, I
don't think any software is worth $499! That is ridiculous! And they wonder
why people are pirating and enjoying the newsgroups! I can not fathom paying
500 bucks for buggy software... that's prolly pounded with DRM! Unbelievable!

I'll try everything but I'm leaning toward the Langevin dual vocal combo that I have. In addition to sounding very good the comp seems to be very nice for a few db of compression on the way to disk. I have a bunch of stuff but I've been using pretty much that or the Syteks on everything.

Believe me, I wish I could. The problem is that in addition to playing in this band, doing my own music, mixing for other people, DJ'ing, occasionally getting eating and/or getting laid, I also work as an IT geek at the most successful investments organization in the world. So if the mics are in my house then whenever anyone else in the band wants to lay down so much as a shaker I have to drive 25 minutes out there, wait, and then drive back. No can do.

The silica gel packs are a good idea, thanks. The cabinet where the mics are won't be freezing, it will just be cold. I told the guys who will be using them when I'm not there to give them plenty of time to warm up before starting. Because of the punk rock teenagers nothing is ever left out between tracking sessions so there's usually a fair amount of time setting up stands/shock mounts/amps and so on. I think that will usually be enough time to let everything warm up.

Thanks again,

TCB

Vista is giving both our developers and support personnel fits here at Xerox. Especially, the 64-bit version.

Vista should sell more Intel Macs than anything Mr. Jobs could do.

Gotta say, just received a new MacBook Pro. Nicest computer I've ever used (and I go back to a wire-wrapped CP/M box with a hand-written BIOS).

I've got Leopard, and two XP VMs running concurrently under Parallels. Smooth as SILK. Welcome to the real future!

Rock on!

MarkI have a dualhead video card that is feeding a pair of LCD's via DVI. I need a switchbox that will take the DVI input, convert it to analog and send this signal to to a CRT in another room.

Anything like this exist in the entire universe?

Thanks,

Deejhttp://www.cablestogo.com/product_list.asp?cat%5Fid=3303

If i understand you correctly

chrisl@adkproaudio.comChris, I was just going to post this for you..

My company is buying me a new Dell Laptop XPS Core2 Duo-2.2, 4gigs Ram..yada
200 gig sata(7200 rm) 128 Nvideo..$2900.00

The Same spec Mac Book Pro just a little over 3k..But, the Mac has a better
Video graphic adaptor.

The Mac, to me is a better buy...Being that I can run OSX and Win XP/Vista..

Question: Seeing that the Dell is essentally a mac clone (Core2 dual CPU(s)..Intel Mobo..Nvidia Video... Why can't I (on a fresh drive) load OSX on the Dell ?

Yep!!!This kills me. Some of you guys for years have insisted that Apple stuff is no better than cheap PC MOBOs. That they use cheap inferior stuff. Some of you guys have complained about Apple costing more. Some of you guys have said that you want cheaper Apple products. Now Apple is starting to use cheaper components which will mean lower prices in the future. This is what you guys wanted, cheaper, remember? You can't have it both ways, there is a reality to this.

I'm sure RME will get drivers to work with the new chip, it's just a matter of time.

I'll finish up the big reverb. It sounds really, really good in its own right. I have a plan for simplifying the interface. As soon as I get that done, I'll release it, and move on to the next project.

Those e2 files are going to keep me busy for a long time. :)

Cheers!

Mike

>Hey Ted! I would recommend zeroing the system drive. Wipe the drive clean
and re install. Do a fresh install, don't install over the top of an OS
install. If you have to, you can install from the installation disk that
came with the computer then install Tiger over that, but that's it.

Once installed, turn off system update. You might even want to install little
snitch. I have my suspicions about the mother ship. It's funny how sudden
slow machines coincide with major OS releases. If this doesn't work, it's
probably the hardware.

I'm not one of "you guys". I have used Macs and PCs for years. Have
built and/or repaired PCs and Apple machines for years.

They do not need to use "cheaper" parts to make the prices cheaper.
If Apple is going to cut corners like this then their hardware should
should be no more than a Dell or E-machine. The fact that they used a un
tested but cheaper chip instead of the proven to be compatible firewire
chip set is very lame. Apple have consistently used good quality
components over the years the same way some a high-end custom PC maker
or a DIY person that wanted to good quality and reliable machine would
do. Any of these users main concerns are reliability and compatibility.

>

Why should RME, MOTU, Presonus, TC, Focusrite, various hard drive
makers, etc have to fix it? You would think the company that sells the
broken product would fix it? Maybe they can fix it with an OS or
firmware update so that hardware developers won't have to develop an
specific driver for a malfunctioning hardware that has a limited life
span on the market anyways?

Chris

chrisl@adkproaudio.comOk, I'm confused. Why would Apple, Dell, Sony, Toshiba or any of the Personal
computer maker/vendor make use an item knowing that it would present problems
to the masses??

That does not make sense to me. But, a handful of Pro Audio manufactuers
gear have problems? Maybe the Pro Audio vendors needs to have a bigger voice
in the design process in order to assure a smooth transition..

>chrisl@adkproaudio.comHi Tom,

It's great to hear that the EQ is getting used and making a difference. :)

I was thinking of eventually doing a 2 band version just to use fewer resources
if 2 bands are all that's needed. Mind you, now that Chuck has posted all
the DP/Pro effects, I've got a much longer road map to work through!

The reverb sounds really nice. It just blends in with the direct sound exceptionally
well. It's got over 40 knobs and barely fits on a 1280 x 1024 screen - not
so good. I'm going to rewrite the GUI so that one knob controls which of
the 32 early reflections you are trying to edit, and a second controls that
reflection's settings so that 32 knobs can be cut back to 2 or 3.

It will probably be done by the end of next weekend.

Glad to hear your PC issues are behind you!

All the best,

Mike

>Hi All,
Switching from Paris to Logic and pretty much decided to go with the Apogee
Rosetta 800. I'll be using this on a Mac 3G quad core. Anyone care to comment
on the difference between a symphony card or the firewire interface? I'm
a little confused as to which is the way to go and why 1 may be better than
the other.

Thanks, AlHi DJ,

I am doing this when I need to supply video to my vocal booth
(A telephone box sized Auralex Max construction :-)). Normally
my Quadhead supplies 8 LCD screens, 4 21" that are vertical
behind my Tascam 2400 controller, and 4 15" that are at 45
degrees in front them which are touch sensitive. I use DVI "Y"
cables each supplying a 21"/15" pair. Longest run on these =
12 feet. When I want to see what is going on from the vocal booth
I disconnect one of the touch screens since my arms are not 20
feet long I can't use it anyway :-) and plug in a DVI:VGA adaptor
to the open DVI "Y" arm and that into an IOGear 2 port splitter.
This because they were cheap at OfficeMax and take VGA In, supply
2 VGA out and boost to 215 feet, and it was the boost I needed.

This should be totally unclear to anyone but you! LOL! What you
can do is plug a DVI Y into your card (don't think they make a
"Y" with 1 DVI, 1 VGA but might be wrong), take 1 arm to your
existing LCD, plug the DVI/VGA adaptor into the other arm (these
things are molded and about 2" long) and use a cheap VGA boost
box like I did. Probably need the boost to go more than 12 feet.
I have 3 or 4 VGA boost boxes sitting here if you want to try one.

I promise that all this makes absolute sense to me :-)

Mic.

Got a nice, solid Paris setup, with one card for now.

Are you guys up to date on Windows updates? I am having some troubles with
my Matrox video card drivers, and hoped maybe I could fix it with an XP update.

Basically, I decided to try using my onboard graphics, which was sorta glitchy:
I had to reinstall the drivers every time I botted up. So I uninstalled those
drivers and then the computer didn't recognize the Matrox card for a while,

and then when it finally "found" the card it won't finish installing the drivers after reboot, and I've tried several times. Hmmm...

Jimmyit's a Willie Nelson thing. I don't know who the guitarist is - maybe his son, Lukas.

http://willienelsonpri.com/wp-content/uploads/2007/06/Willie _Peaceful_Solution_2.mp3

There are just two short guitar breaks, but they're worth waiting for.

They have VGA inputs.....I don't think they have VGA outs.....Wouldn't that be cool?Really nice pickinI wouldn't write every Apple model off just yet. More research is needed.
There are many assumptions going on here. Less expensive means junk, not necessarily. Just because it does not work at the moment doesn't mean it will never work. Boxing and burying all Apple products because RME stuff doesn't work with the latest iMac models is a little too much. If this new chip becomes the new standard with manufactures the third party companies will adapt. Give it time.

>Hi James - I wasn't writing off every model - just the current line, on the
assumption that Apple doesn't change motherboards mid stream once a line is
released (that might change in future revs of the same line of course, and
with a new line - which is probably due around Jan/Feb?).

Audio hardware developers may be able to adapt to support the chip, but the

problem with protocols like this is that when tolerances are outside of what a device needs to function effectively (i.e. to advertised specs), the only way to adapt is to lower the performance of the device (which of course won't float with users). How many RME, MOTU, TC, Presonus, etc users would settle for 8 channels of audio at 48k instead of 16 at 96k, or 12ms latency instead of 3? Just an example - I don't know if it equates to such numbers, if adapting is even an option. Synchronization for streaming audio may be a complete loss with some chipsets, where data transfers for drives might be fine. In my experience, it's a matter of whether the device can even be seen by the system - audio devices are much more demanding on the 1394 protocol than hard drives, unless you are streaming full res video (e.g. prosumer/professional cameras dumping HD/HDV might have problems as well).

That's a big problem. Doesn't matter whether it's an Apple, Dell, Sony, HP or Acer computer - incompatible or underperforming hardware is a problem. That's why every laptop I've bought I had to research the firewire chipset. Same goes for building a PC - firewire needs to have a known working chipset, or you are adding a firewire card to replace it and eating up valuable PCI/PCIe slots.

For consumers, issues like this go largely unnoticed, and that's the audience computer manufacturers are catering to, so the chipset probably falls within Apple's specs for firewire performance.

This isn't a unique slight of Apple - it's an issue with all manufacturers, but there aren't as many options with Apple. So, it's just that this something to watch out for if planning to buy one of the models with manufacturing dates listed in the link.

Regards,
Dedric

Hehehe!!!!.makes absolute sense to me too and sounds exactly like what I need to happen. I'm using a UA 610 Solo for splitting dry electric guitar signal off to the control room A/D's while the "thru" jack is sending the guitar signal to the input of a mic'ed cab in an iso booth. The same basic scenario is happening with inputting electric bass to a Little Labs STD Allows very long cable runs from the instrument to the box and the box provides two 1/4" passive outs), taking the STD output with the ground lift direct to my B15N Portaflex in an iso room and the other 1/4" out to an old ART tubepack (very cool for Bass DI/levelling), amplifying and compressing it in 6the tracking area and then sending it on to the input of a TL Audio tube EQ in the control room for final shaping/sweetening before hitting the A/D converter. this way, the players (especially the bassist) have the freedom to stroll around all over the tracking area or down into the drumroom to lock in with the drummer since this kind of octopus rig will support ridiculously long cable runs. I need to be able to see a monitor in order to dial in some basic levels on the 610 Solo and the Tubepack in the tracking area while keeping an eye on these unruly heathens. The minute I disappear behind the curtain, they quit minding me and start misbehaving.. ;o)Hey Mike !!
I have sent you thre-four emails but all these are coming back after 12-24 hours as fatal error addresses !
So thanks for sending reverb and trying here is some suggestion :

Hi,
Thanks !!!
Great reverb !!
Don't use 0 for ER1-16L

Don't use Reverb sixe 0 !
Don't use ER size 0
As a matter of fact anything xL cannot accept 0.

Don't use reverb size 100% as this makes the ooposite of big reverb...
Use a start all at 12 o'clock ER send 100%
Difusers 50%

All ER1-16 all at 12 o clock
All DF1-4 at 12 o clock
ER size 100%
ER slope 100%
ER shape 100%
RV Low 50%
High decay 100%
RV Mi-decay 4.200
difusers 50%
reverb size 30% and over
Direct send 0
Direct out 0
ER send 100%
Er out 20%
Reverb out 75%
Predelay 0.003

Dimitrios

Noise Freaks,
The noise sounds computer like. It is coming down the analog
line and is not related to proximity of the cables although I can't
really move them much. It sounds like wc (almost) faintly in the
background and it moves up and down with the fader. With proper
gain staging it improves but still sucks. I'm working on a ballad
that needs quiet. I can't get any of my 4 Mecs to work at this time
so I can't bus via ADAT for this mix. I never heard it through ADAT
in the past. I am hearing it through SPDIF now though.

With a 442 at the receiving end and a spdif and stereo analog at=20
the cubase side what would you do?
Problem Child Tom

It just dawned on me that the Cubase machine is receiving clock
at 48k from an ADAT machine through the Scope Pro card.
This is probably the source of all evil here. Can someone=20
walk me through changing the clock settings to internal on the
Scope card? It has been so long I've forgotten how to edit it.
I looked and didn't see it. This Paris project is at 44.1 so that
could be a major problem.

Dimitrios, Thad, Aaron?

Thanks as always.

------=_NextPart_000_0043_01C82349.77824530--I was the opto limiter from the DP/PRO and it has a bug or two, I think I'll
hand it off to matt if I can find it, cause it was really nice, but took
up a huge amound of DSP/

>Hang on... Didn't Apple buy Logic Audio in an effort to capitalize on the
"Pro" Audio market?
So why are Apple now making boxes with 1394 chipsets that
don't work with the "Pro" hardware of choice, in order to save a few lousy
cents on the TI chips?
Whilst I agree that the likes of us audio dudes represent only a tiny
percentage of Apple's custom, I'd be pretty pissed if I got
sucked into jumping
ship back when PC support for Logic ceased and found myself
in this situation.
Phieww!!!
I'm happy with the dual core Gigabyte AM2 mobo I bought for my
next DAW (with 4 pci slots AND a TI chip), for $110 AUSTRALIAN!
(They're probably about $70 in the US). Cheap? yes. Nasty No!)

(859) 635-5762I just tried to ring you. Your message center is full so you must be popular
since you posted this. I'll bet thousands of people have been callin you
wanting to know how to build a virtual touch screen mixing desk. Give me a
call when you have the time. I'm seeing different models of DVI>DVI

splitters with some reviews that indicate major suckage. I'd loke to get
something right for a change.

Hey Steve,
That older swing style always makes me smile when done authentically.
Very reminiscent of the Les Paul show I just saw.
The guitarist is a far better soloist than the other two cats
that's for sure. Can you say arpeggio?
T.

I'm sure you know that MIDI is not sound, but a code of instructions a MIDI instrument interprets to play sounds. You don't have to be a programmer to make use of it though.

You might try to contact Korg for a manual. Unless you need to write arrangements or sheet music in standard music notation, you shouldn't require a notation program. A software, or hardware, sequencer should be

all you need. I still use an onboard hardware sequencer in my workstation to make quick rough MIDI compositions, which I import into my software sequencer for further editing and such.

> and record it.

I would think any of the standard software sequencers would work, Cubase, Cakewalk, Logic, Reason, etc. You might look at some older versions of these. Some have virtual instruments(VSTis) included. You can also find free VSTis online. You might download a demo of Reaper and see what it will do (a $40 software).
>
> Perhaps I am asking too much? Surely these midi files were not created
> note

> is my only playback... but maybe the sequencer software can enamble me
> more
> sounds?

MIDI files can be created either by programming (step sequencing a note at a time) or by playing or both. I assume that your laptop has a MIDI in, so you can use your MIDI keyboard, and that you are playing the laptop's soundcard synth? If your Korg has sounds, you could get a USB MIDI interface for your laptop, so it could play the Korg or other external MIDI devices. Of course you would also need some playback amp/speakers for this.

Go here...

http://www.korg.com/service/support.asp

And click on "Documents", from there you can pull up a ton of
their products & doc for same, including manuals. maybe they'll
have the one for whichever model keyboard you have.

NeilThat's my point as about Apple. Apple has always had the reputaion of playing
nice nice with the Pro Audio market or have lead the way of trends. SCSI,
Firewire..to name a few.

I have two firewire audio devices (M-audio 410 & ProFire Bridge). Both work
 flawlessly on any computer I use. However, I prefer using PCI audio cards
for max thru-put.

>Hi Dimitrios,

Thanks for checking this stuff out! I'm in the middle of moving, so I didn't
even have my speakers set up yet. I was trying to get a default preset working
with headphones only, and started to go crosseyed.

I caught the zeros problem, too, and I've fixed that by not allowing zeros
anymore. I'm also going to change the maximum reverb resonance delay to
.1 seconds. The Dp/Pro allows for .2 seconds, which is what I was basing
my UI on. But, you are right - anything over .1 sounds crappy to say the
least.

I'll check what's going on with my email. That's a little worrying.

All the best!

Mike

Well frig yas all I figured it out myself.

It was grounding. Didn't sound like it but it was.
Simple fix. Ya know on the 442/Mec. Little button
called ground lift?

Got the clock thing figured out too with the Scope card.

One step at a time I tell ya. One step at a time.

Thanks anyway!
Tom

"Tom Bruhl" <arpegio@comcast.net> wrote in message =
news:47356c2e@linux...
It just dawned on me that the Cubase machine is receiving clock
at 48k from an ADAT machine through the Scope Pro card.
This is probably the source of all evil here. Can someone=20
walk me through changing the clock settings to internal on the
Scope card? It has been so long I've forgotten how to edit it.
I looked and didn't see it. This Paris project is at 44.1 so that
could be a major problem.

Dimitrios, Thad, Aaron?

Thanks as always.
T

Noise Freaks,
The noise sounds computer like. It is coming down the analog line and is not related to proximity of the cables although I can't really move them much. It sounds like wc (almost) faintly in the background and it moves up and down with the fader. With proper gain staging it improves but still sucks. I'm working on a ballad that needs quiet. I can't get any of my 4 Mecs to work at this time so I can't bus via ADAT for this mix. I never heard it through ADAT in the past. I am hearing it through SPDIF now though.

With a 442 at the receiving end and a spdif and stereo analog at=20 the cubase side what would you do?
Problem Child Tom

I choose Polesoft Lockspam to fight spam, and you?

Very interesting.

MRYou've been working all day and you know you're too fried to keep it up but you want to get one more track done and you need to patch a preamp output to an A/D converter and when you do this you get no signal, so you try another preamp, and yet another and yet another and yet another and there is absolutely no signal at all so you start wondering what kind of bizarre voodoo would cause every preamp output connection in your patchbay to go dead and then you go so far as to start to unrack your patchbay when it occurs to you to try a different patch cable.....

G'nite all.....

Is the Symphony a PCI/PCI-E card? AFAIK, that still gives you better throughput than the bandwidth on a Fireware interface can.

BTW, Bob Katz says Firewire tends to be more jitter-prone, if that makes any difference to you, as well.

Neil

  grrrSounds like you'll need to do a clean re-install of the OS...
I had that problem on several installs. Lesson learned, never mix graphics drivers... And I think alot of those companies that put the junk graphics in the motherboard don't pay attention to the uninstall... if it is like ATI, I don't think those drivers truely uninstall... the only solution, clean install of the OS and turn off the motherboard graphics forever....

I'm using VGA splitters along 30' of cable in total. They look good on =
both
a 22" LCD and a 21" VGA x 2. They are very susceptible to RF though.
I'm constantly moving the splitters around to stop the fuzziness on one
or the other LCDs using their VGA inputs.

>You might want to read the SOS article on Vista from a couple of months ago.
RME was less than enthusiastic about Vista.

Cubase and Nuendo 4.1 are Vista compatible now, and a 64-bit version is out
as well.

Vista isn't their fault, it's Microsoft's. It sucks imho, and never will be
a great audio app unless it's overhauled or stripped back down to being XP
SP3.

German Keys magazine and a few Nuendo users that have tried it, are
reporting that Nuendo runs better under bootcamp XP than OSX on the same mac
(new core 2 systems), same projects requiring higher latency to run under
OSX than bootcamp XP, at least in one case. Not sure how much difference
there was in the Keys mag tests.

Seems like XP is the most effective OS for audio at the moment. Not that there is anything good about OSs being signficantly different in performance. These are just supposed to be operation systems, nothing more.

Regards,
Dedric

>Thanks, Ed. I really appreciate it.

This board has saved my ass so many times over the years. I am so sad to see it slowly, slowly dwindle. I am far from abandoning Paris myself, and I'm scared to see my homies jump ship.

Speaking of which, I emailed Deej recently and received no reply. Perhaps I got SPAM-filtered?

you might want to change your subject line from

Paris-cubase intercourse

to

Paris-cubase interface

Once you do that DJ's sperm blocker...er I mean spam blocker should let your email through

hehehehehe

>Thanks for that input guys, I want a stable, trouble free system (well,as
close as I can come to that). Seems like every opinion I hear states something
to that effect about the firewire. I was hoping to hear better things about
the firewire interface so I could keep a PCI slot open, but seems like I'll
have to use one to ensure better and more stable performance. Leaning toward
the Symphony card.

Thanks, AlIs this reverb ready for public consumption yet? I'm mighty intrigued!

And it supports what I've been saying all along, you'll take a performance
hit if you want to use a 64 bit (integer, FP has been more than 64 bit for
years) OS, at least for now. The only reason to use a 64 bit OS has nothing
to do with 64 bits, it will have to do with things like better multithreading
support and such.

Don't, don't, don't . . . don't believe the hype.

>Hi Gantt,

I set up my speakers yesterday, and the reverb sounds really good.

Right now, the plugin is full of debugging code I added, and it has 46 knobs
that won't completely fit on a 1280 X1024 screen.

I'm going to reduce the number of knobs, but that's going to take a bit of
work. I may finish it tonight. It may take until the end of next weekend.

I'll remove the debugging code and post it as is tonight. It would be great
to get some presets going for the final version.

All the best,

Mike

>Hi guys,

We use stuff like this in airport environments to run from a closet of blade servers to displays throughout terminal concourses:

http://www.blackbox.com/files/productdetails/10690b.pdf

You can get up to 150 meters on CAT5 at XGA and higher with no quality hit.

ChuckHi John,

Do the update if you can afford it with the following things in mind.

For sure the graphical EQ is wonderful. Rendering is very fast and useful too. Exporting a stereo wav is nice. I hardly ever use the paf-wav converter anymore. More so on wave files I'm preparing to add to Paris. You might consider purchasing Brian T's DVD. It contains very informative data on how to use Paris to it's fullest. v3.0 DOES have the pace interloc pain.

If you're using an XP machine you will need to disable hyper threading and be sure to follow the XP setup steps. I remember having a severe aux bleed problem on XP with v2.2 on aux 1 and that is fix'd with v3.0, but, v3.0 has a monitor knob problem. It's OK to use it but when you bounce to disc make sure it's sitting at "0". Distortion is induced on setting above "0". It gets really bad above "12" in my situation.

Ask around the newsgroup for info on the things I've discussed. I'm not always available to answer because I'm out and about quite a bit for a week or two at a time.

Wayne

>Wayne and Mike,

Thanks for the responses on this as always, I think I'm going to give it a shot to upgrade to v3.0. Sounds like the aux 1 issue you talked about in your earlier post to my main post on this subject is also happening to me. It's weird, it only happens sometimes, which forces me to close the project and then reopen it again and it goes away. (regarding the aux 1 audio bleed into all channels). I think thats what you were referring to, and you said this issue is fixed in v3.0. You also mentioned that I will be able to Disc Bounce to .wav directly without having to do a paf-wav convert in Sound Forge, that's a nice feature.

>Hello everyone,

A few questions...

I see that the Intel P35 boards need 1.8v RAM... so what is recommended here? It seems like most of the "good" RAM (Corsair or Super Talent) is 2.1v.

P35 motherboard:
http://www.newegg.com/Product/Product.aspx?Item=N82E16813121 314

And now I'm horribly confused about PCIe 1x vs 16x slots. Obviously the 16x is for video... but on some motherboards there are 3 16x slots and NO 1x slots. Does anyone know if PCIe cards such as the RME and UAD1e stuff will work in a 16x slot?

975 motherboard:
http://www.newegg.com/Product/Product.aspx?Item=N82E16813121 060

This will be with a Q6600 processor...

Thanks,

GrahamHi Graham,

The 1.8v is a recommended default. They all work with 2.1v.
I would go with the P35 board for the 1333sb support. It also has 3 PCI slots instead of 2.
16x slots on most motherboard will be compatible with devices 1x and higher.
Not sure if you noticed this but 99% of all motherboards only have 1 true 16x slot the 2nd of 3rd slot are 8x or even 4x only.
The only real benefit to having 2 full 16x slots would be for 2 video cards in SLI or crossfire mode for gaming or 3d work.

On the P35 board the UAD card will work in 2 of th PCI-e slot that are on the south bridge. The one on the north bridge if flaky with them. That is the case with most motherboards.

So basically on the P35 you will have 3 PCI slots and 2 usable PCI-e slots for audio devices.

Chris

Hi All,

Here's the reverb as is. I didn't get a chance to remove the debug code,
so you'll have to place the "reverb.log" file in c:\. If you have any trouble,
at least you can send me the log. :)

I've found a way to do multiple pages, so I'll get that going as soon as
I can.

Let me know what you think!

Mike

---=_linux4738f168--LaMont, please don't take this personally, but you just don't know what you're talking about. I _know_ the RME guys. I was there the first year they were at the Frankfurt Musikmesse. They are one of a very small group of companies that do all of their driver development in house. And they do better than anyone in the business.

Drivers are extremely arcane pieces of software, it's uber geeky stuff. People talk about 'why can't I use any motherboard I want' when driver guys know things like 'on this implementation of this chipset if I don't wait 15 milliseconds before doing X then Y device is going to completely blow up and I'll panic the kernel or the mouse won't work without a reboot.' Which is why good driver guys are booked years in advance sometimes. RME does this all on their own and their first Mac driver was the most solid Mac driver I ever saw. They're the best there is, they even support linux. If they're not writing Vista drivers it's because they can't or don't think they can provide the quality they want for their products. It takes a special kind of company to say, 'I won't let down someone who pays good money for my stuff because the OS too much of a moving target for me to write a really good driver for it.' That's not sloth, and RME aren't lazy, they're German fer chrissakes.

M$oft has some work to do on this.

Or, while tracking a live concert off the FOH board, forgetting to
check and make sure the ALL the damn channels are armed. Like the
lead freakin' guitar.

No retakes in a live performance....

pabGood essay, Thad... I like RME, and have had only ONE issue with
any of their drivers, and it was a version they
updated/corrected shortly thereafter.

And their convertors fail to suck, as well - in my book, anyway.

>Hey Thad, I'd be the first to say that I don't have the expertise in Drivers.
:) But, somethings gotta give. If Digi and Cakewalk can do it, why can't
RME?

I'm taking off my tech cap, and approaching this from a purely consumer standpoint.
MS$ is going full- tilt with Vista. No turning back. So, what do the Pro
Audio market do?

>Audio market do?

The Pro Audio market should say to M$oft: "This sucks - it's
total bloatware & will not allow either of our audio client
bases to put their rigs through the heinous shit they need to
do on a day-to-day basis in order to make use of a PC for
audio - you guys in Redmond need to come up with stripped-down
version of what USED to be WinXP, geared towards the millions
of audio users out there, and then we'll talk. Otherwise, you
can kiss this whole market segment goodbye, and just cede it to
Apple."

That's what they should do.

NeilLamont - they already did:

 http://www.rme-audio.de/en_downloads.php?page=content/downlo ads/en_downloads
 _driver&subpage=content/downloads/en_downloads_driver_hd spe

(See the Vista 32/64 support listing)

The issue isn't that they can't write drivers for Vista - they did, Nuendo/Cubase are Vista compatible, etc. It's that Vista isn't as efficient at low latency with any drivers - RME, Lynx, etc. Check the dawbench.com Vista vs. Xp performance reports.

Working, and working as effectively as it is on XP32, are two different things.

What is pro audio to do? Hmmm... a trip to Redmond?.... hehe....

You are exactly right from the consumer standpoint - we are in a bit of a pickle at the moment. Audio developers haven't been dragging their feet - there have been issues at the OS level, with OSX and Vista they had to wait for a final decision on before jumping into this. Maybe MS will surprise us and release a really efficient SP1 for Vista, but imho, it would take 4 years to strip the security crap out first. ;-)

Neither are performing even close to XP. Until MS corrects things to at
least get performance on par with XP it is a waste of time and money for

any professional to invest in Vista at this point.
RME are one of the few being honest in the article.

MS is released Vista before even basic component drivers were fully compatible. Most of the common ones still aren't. ATI and Nvidia are still having trouble getting driver solid. Creative Lab are having trouble getting their cards working. Many reports of printer drivers not working right. Many SATA, SCSI and SAS devices not working right. These are some of the many reasons even the main stream business market hasn't has not gotten completely behind Vista. The only people on the Vista band wagon are consumer types that weren't given the choice by the Larger PC makers. But even enough of them demanded XP that MS allowed XP to be offered longer. XP would have been out for the market by the end of this year other wise. When Major PC makers start having people say I want XP on it or I'm not buying it they are gonna make MS offer it.

(859) 635-5762Hi Dedric,
Don't worry. Apple will just quietly replace these models with bad
firewire chip sets with new models within the year with no mention of
the issues like many other PC makers do. And none of their new customer
base will ever ask any questions.

Chris

Dedric Terry wrote:

I've done this with static bags (the kind that wrap that new PCI card when
you buy it, or a motherboard)
works great

AADang!! I can't try every speaker in the world... I'd never get any work
done.

How are they?

was this:
They're a little stiff at first, as most speakers tend to be, but once
loosened up properly they are warm and focused but not dry. I don't know how
they wear after a period of time, didn't buy in at the time I listened as I
wasn't doing the gtr gig/couldn't justify. They have more bottom than
celestion but aren't as fuzzy as say a Jensen horse shoe mag. Kinda reminded
me of an old set of Altec's I had once. I bet they'd rock in a JC120.

On a semi-related note, the best gtr cab I played through, probably ever,
for what I dig was an old 6x10 ampeg. focus focus focus perfect rock'n'roll
cab.. gtr player could kill himself and not slaughter the innocent on stage
or in the first row because the slant (what the hell is wrong with gtr
players that listen with it pointed at their pants legs, anyway?) allowed
him to hear perfectly w/o 120dB on the stage volume.

be state of the art - I mainly just want to run some VSTis on it and use
it as a backup server. I may have a UAD1 in it. There is a bare-bone
kit from Tiger Direct that appeals price-wise. Are there any known
issues with this setup (it's a Via chipset)?

MSI K9MM-V Socket AM2 mobo - AMD A64 X2 4000+

MSI K9MM-V Socket AM2 Barebone Kit
The Steal of the Year! Powerhouse Motherboard/Case Combo.
This Socket AM2 dual-core barebone features an MSI K9MM-V motherboard,
the award-winning AMD 64 X2 4000+ Socket AM2 Box CPU, a 160GB Maxtor
hard drive, 1GB of PC4200 DDR 533MHz memory from US Modular, and the

hardware in our new black Power Up 336 ATX Mid-Tower case --complete
with a 450-watt power supply.Cool. There's so much good gear out there now.

>(859) 635-5762Man, I can't agree more. We push and stretch and complain about imaging and the smallest of things when artists like Ella or Woody Herman had next to
nothing, and no overdub capability much less Autotune, digital reproduction
or even solid state. Guess it's just our nature as audio scientists, 'eh?
Times are good, and it's more on the artists at this point IMO.

really bad when we were teenagers because of the passionate
relationship we had with the music itself. Now that we are older,
we look to accuracy, clarity and fidelity to produce that same
response in us, but it never will.

I love having great tools, but that's all they are.

better and faster
if a drive dies it won't make a difference if it 250 or 1000. Its dead. :)

ADK Pro Audio
(859) 635-5762
www.adkproaudio.com
chrisl@adkproaudio.comRME _is_ doing what they can, but it's not their fault that M$oft doesn't
(and probably can't) spend any significant time worrying about pro audio.
So they release Vista with an unfinished, poorly documented audio hardware
spec and (really good) companies like RME do the best they can. And they
tell the truth about the problems they are having.

As a consumer you make like Adam Smith and do whatever you think is best
for you. I try to provide some color about the technical issues behind this
stuff for people who don't read the lkml for fun. For me, I'd guess I'll
look at Vista right about the time I can justify a dual quad core audio box.

Ix-nay on the ack-hay...

Looks too much like a DJ trip to me....

DCBill L <bill@billlorentzen.com> wrote:
>How's it coming along?

Yeah, give us the finger will ya? ummm welll

The story on the finger, ok?

DCHi John,

Yes . . . the aux bleed problem you sometimes get is exactly what I sometimes got in v2.2 on XP and yes it does not exist in v3.0.

Close . . . the disc bounce is still the dual mono .paf mixdown file, but in the audio window (8.) you select these two files and export it anywhere you want, ie, the same folder or to another folder as a stereo inter-weaved .wav file that will play as a standard wave file.

Also, rendering, v3.0 only, is a way to make a single file from multiple objects. Let's say you edit the hell out of a guitar track that had all kinds of pops and clicks and fret noise or whatever. You select all the clean edits, render to disc and now have a single track all cleaned up. And it's fast. Just a couple seconds.

The graphic EQ is cool. Instead of looking at numbers, it's graphed. You select the type, ie, shelf, bandpass or what ever, grab the node and move it in freq and boost/cut at the same time. You can close your eyes and listen. Very easy.

Remember though, v3.0 has PACE and get the Brian T DVD. This is definitely worth it's price. I think it's $30 or 40 bucks.

>Hi Cujo,

This was a reverb called "The Big Reverb" that was commented out of the original
PARIS stock effects. It had a bug in it that caused it to freeze PARIS when
it loaded that I fixed. There was no GUI with it, hence the crappy UI that
I am still working on.

It's nice. 16 stereo early reflections plus a nice, big reverb.

Let me know what you think.

I thought some of you might be interested in this info. I spent some more
time with a buddy of mine who has been running Reaper. I was very impressed
with Reaper's feature set and wickedly impressed with the track counts his
computer was delivering. For me, it seems an ITB solution has arrived.
He's running the following configuration (with a tricked out MSI vid card)

Intel E4500 Core 2 Duo 2.2Ghz 800fsb, DDR2 2 gig Biostar p4M890-M7 TE mATX
motherboard, VIA P4M890 Chipset. The mobo has 2 pci slots and 2 pcie slots.

Here's the counts:

12 audio tracks, 30 tracks with vsti's (the majority of these were running
Garritan's Personal Orchestra -Kompakt LE -most instances had three to four
instruments, though we also had a smattering of tarus pedal emulations and
stienberg's vb1 thingy) and the following fx: 4 band eq's on all tracks, 14
compressors, 13 delays, 13 choruses, and three convolution verbs on sends.
For me, this is a fairly typical track count on a song. The CPU was running
at around 55%. Nice.

So we doubled the audio tracks, and kept, on each of these new tracks an eq,
delay, chorus and compressor. And, we added three more sends, each with a
convolution verb (that's SIX con-verbs ((vs lawabiding-nouns))). We had a

total of onehundredandfourteen fx running. The CPU was running around 75%.
That's 24 audio tracks and 30 vsti tracks and plenty of fx to go around.
For me, this would be a unusually large project. With all these tracks, his
screen redraws were slightly sluggish, but not enough to slow the work flow.

This strikes me as pretty freakin' amazing. For a project studio guy with
delusions of sub par grandure, my finger's on the trigger and gettin' pretty
itchy.

MR

You got my last donation right ?
I am waiting to see what you will come up for a simplified parameters reverb...

Regarding the other DP plugz please take a look of any guitar cabinet/distortion plugin as this is much needed here at least !!

Keep up the great work !!
Regards,
Dimitrios

Thanks for the kind words and the financial help!

I am very excited about getting to work on the dp-pro stuff. I think I'd
like to get the multiband compressor working first, but I'd be happy to tackle
the guitar amp after that.

I'm sorry things have been moving more slowly than they were. I just started
a teaching job, and it's been a bit intense. But, not to worry - development
will continue until there are no more algos to port. Even then, I bought
a book on dsp programming, and I'd like to do a phase linear eq someday.

I'm pretty sure that I'm going to keep all the controls, but put them on
two separate pages. It won;t be long now until it's done.

All the best!

Mike

http://www.bigcee.com/faq/Cmodel_big.jpgAMP SIM???
I'd sell my left testacle to donate toward that one!!
Nice work, Mike.

---=_linux473b0378--If you think that's amazing just wait till you try Cubase 4.1 ;-)Fuuuun! But the front wheel is a lot bigger than the rear. They should
fix that.

What if he just did a different GUI - one that had all the
basic parameters you'd normally want, and then a button that
says "more" or "advanced", and when you clicked on that, the
window would drop down or expand to reveal all the rest of
them. Heck, with all the parameters he's talking about he could
do a three-stage drop down... "more", "still even more",
and "super-tweakers only" lol

Neil....it lookes nice to cost only 50$ for a homeuser licence....

Found some on line but they were priced like they were made out of gold!
TIA,

Mic.We get ours from TCH... but they are a bit pricey and expensive to ship.

https://www.tchweb.com/cgi-bin/TCH2.storefront/

David.

About 1.25 per space both sides.

DC

I tried putting some of these plugs in my XP Paris OS, and some of them
don't show up. Any idea why? They all showed up fine in my ME OS.

I want to get a 7 slot PCI magma with a PCI express host card.I need to run
2 powercore cards,2 uad PCI and possibly a couple others.I also want a UAD
ultra PCI Express on the host .any known issues with that setup?caveat
emptor?This is a multi-part message in MIME format.

---=_linux473b8e78--Anyone familiar with these machines? Aaron, DJ? You guys are tech whizzes.... help. I just picked one up and have a few questions about the RAID controllers and drive compatibility. Win XP will be installed on this machine. I am familiar with the specific SCSI U160 and U320 drives which will work in the system, however:

The multiple hot swap bay is installed, but is there any other hardware I need besides the SCSI card?
I need to know if a U320 drive has the same pin footprint as the U160?
Can I use these drives interchangeably with the same SCSI RAID card?
Or once I install a U320 RAID card can I only use U320 drives?
If I install a U160 RAID card can I use both U160 and U320 drives?
What software would I need to enable the RAID system to function?

Thanks,
RichGlad to hear all is going well. Us old guys heal veeeerrrrrrryyyyyyyyyy slooooooowwwwllllyyyyyyyyy, so hang in there bud.

Rich

"The hardest arithmetic to master is that which enables us to count our
blessings."

Blessings on ya bro

AAHI Alex,
This info from UADs web zine is still accurate.
http://www.uaudio.com/webzine/2006/december/index5.html

Good luck getting UADs and a TC to work in an expansion chassis.
My advice would be to swap you UAD PCI cards to PCI-e ones and use a
PCI-e to PCI-e expansion chassis.

Which versions of the Powercore? The old pre- mk2 ones? If so you are
best off getting one PCI or PCI-e mk2 one to replace those 2. The old
will not work on newer hardware.

I've used the Cyclone chassis a few times with UADs and it worked great.
Otherwise I would go for the SBS chassis.

....and I'm wondering why I bothered. Sometimes though, I just have to think
that the reason people get away with things is that nobody pulls them up...

Today I received this survey in Facebook:

"Would you pay $150 for CD quality, wireless earbuds for your iPod
(see Kleer)? Sponsored Poll"

I assume this is by you guys?

I wished to point out that CD quality, by definition, means frequency response of 20Hz to 20KHz with a 96db signal to noise ratio, among other things.

Last I checked anybody with decent ears, and indeed, a high percentage of people without decent ears, are able to sit in front of a good quality stereo and pick the sound quality difference between an FM radio station and a CD player without too much trouble, even if the FM radio is exceptionally good and expensive. I have listened to FM radios valued in excess of $1000, and other older units which are cheaper but are generally accepted by audiophiles to be of exceptional quality. While many sound very good, none have compared to a real CD, which in themselves are far from perfect of course.

My point being that when one considers that $10,000 of transmission equipment and a $1000+ radio receiver are unable to achieve CD quality then, if nothing else, the answer to the survey seems obvious. Indeed, if you are able to produce wireless earbuds for $150 which actually meet the spec of "CD Quality" I will personally buy every single one that you produce for $300 each.

They will, of course, have to actually be CD quality.

They are CD quality I take it? You're not lying to us, are you?

Cheers,
Kim.Should it work on Mac? If so, where do I install it? I put it in: System folder -> Ensoniq -> Plugins and also just in the Ensoniq folder but it didn't appear in Paris.

the UAD's I can upgrade ,but the powercore already IS an upgrade ,so an
upgrade to PCI express is not allowed.(1 card is a PCI MK I ,the other is a
MK II.).
I've been thinking about a UAD-1 extreme pack, so Id get most of the plugs
and more DSP, for about the same as just buying the plugs.
there goes the credit card balance again!

>Hehe. I wonder if they'll even respond actually, but it makes me feel a small
fraction better to know that the email got to their Inbox, and I expect would
have been passed to the marketing department, or a tech, or something. Suffice
to say, even if they don't respond, it will force a couple of staff members
to make admissions, even if only to each other, that the "CD quality" claim
is bollocks, which I'm sure some staff knew already...

....but at least they know the lies do get noticed.

I was annoyed afterwards when I realised that I should have told them that,
based on my stated argument, I have voted "yes" to the survey and recommended
to all my friends that they do the same, and that they spread the word to
others also. Doing that might then make them doubt their own survey results,
which in turn would have a much larger affect. Potentially they might have
to discuss in board meetings the fact that their survey results might now
be very inaccurate because the question was a lie, which in turn might lead
them to actually rethink the policy.

If they reply I might tell them that. ;o)

Sometimes I wonder if there would be any legal avenues through which an organisation
could be set up to take companies to court for making outrageous claims,
and then fund itself from the court compensation payments. The difficulty
would be that in order to fund itself off compensation, the company would
somehow need to have rights to the compensation which rightfully belongs
to the greater public. I'm sure we've all noticed however that outrageous
lies are made quite often, especially in advertising, and it seems to me

at least that the vast majority of them simply get away with it.

Anyhow, what's this group for again? ;o)

Cheers,
Kim.

>OK, so I've got Cubase 4.1 running on two computers (master slave in
systemlink) and I'm (as usual) not willing to acknowledge the limitations of
the software until I test them.

Well.....of course, the first thing that anyone would want to do is create a project on the slave DAW and point it to a directory on the Master DAW over the network, right? Why hell yes they would so being as curious as the next guy, I do this, record enable the track and record some audio on the project on the slave DAW across the network to the hard drive on the master DAW.

Then, while the project is still open on the master DAW, I open it in cubase on the master DAW and now I've got the same project open on both computers so I add a track to the project on the Master DAW and record some audio to this and lo and behold, the audio shows up in the media bay of Cubase on the master DAW and the project plays back sync'ed to Sytemlink on both DAWs.

"Cool!!" says I.....so then I close the project on the slave DAW and then on the master DAW but I get an error in closing it and when I reopen the project on the master DAW, the track I recorded wasn't saved. "Hmmmmm"....methinks ....."let's explore this further" so I open the project on both DAWs and now the track that I tracked on the slave DAW is showing up on the master DAW. the first time I tried to play back the same audio file simultaneously on both DAws, one of them crashed, but then I was actually able to accomplish this. Why would I want to you ask???.....well, first of all it's a very cool way to create a slapback delay by tweaking the buffers on the two machines.....since delay plugins have yet to be invented..... ..;oD. I also thought I heard some muffled screams from one or the other DAWs, but I'm not sure.

Further testing reveals going down this path to be complex and frustrating for a number of other reasons, but I actually was able to accomplish a somewhat successful workaround which would allow a similar level of fuctionality to working with the networking features of Nuendo, but .....if you want to do this, just buy Nuendo. It's not worth the grief (well...unless you have a twisted intellectual curiousity).

One thing that seems to be gratifying however is that it is possible to create two folders on the audio drive of the master DAW (master and slave) and then create a project on the slave DAW and point it to the folder in the Master DAW over the network, record to it, save it on this same networked drive and when you open Cubase on the slave DAW it will find the project again over the network. There seems to be adequate throughput over gigabit network to stream the audio from a single networked master drive.

I still have some other nefarious ideas as far as bending this audio app to my will that may actually enhance it's functionality rather than just laterally pervert it as I seem to have managed to do tonight.

Stay tuned.....

couple of kids. I have a wonderful pair that I'd be happy to rent to you
- an adorable 7 (soon to be 8) year old daughter and a strapping 10 year
old son. Let you have both for a week or two cheap. Even cheaper if you
teach 'em to ride (horses that is).

chrisl@adkproaudio.comOddly, we did just do wills this week. hmmmm Coincidence ?
hmmmmHi Carl,

Try adding your plugins folder to your windows path. That seems to clear
it up. I'll post an updated ini file in the next few days if you'd rather
wait. I have an idea about what it could be.

All the best,

Mike

>
>Wow   Nice hobbies guys !!Hey Deej,

While there are real problems having files open by two applications (and
I expect you could run into problems down the road no matter how you work
around), for my job I've been investigating and iSCSI SAN for some of our
production apps. You don't need bending end gear for iSCSI anymore. Just
a machine that will RAID some drives, a gigabit switch that supports jumbo
frames, and some CPU cycles to spare (they have to calculate the tcp frames,
unless you buy a fancy network card with some built in brains). We're going
for a pretty high end system with all kinds of fancy stuff (snapshots, mirroring,
replication, etc.) but you might want to consider a fileserver.

Here's a link to a website the describes how to add a directory to the Windows path:

http://www.computerhope.com/issues/ch000549.htm

just add the full path to your windows\system32\ensoniq\plugins folder to it.

Let me know how it goes.

>Hi All,

I'm am very proud to announce the release of the Big Reverb!

The "Big Reverb" was an unfinished algorithm that had been commented out of the original PARIS stock effects source code. It includes 32 (!) configurable early reflections, 8 configurable diffusion times, and 12 configurable reverb resonance times. This reverb is one of a kind and sounds awesome!

This is not the reverb created by Matt Craig, but a completely different algorithm.

As always, you can download it at www.ensoniq.ca.

If you find this plugin useful, please shoot me some cash. I'm broke as
hell.

All the best!

ROTFOIUSDFOIUYSDFLKJH!!!!!!!!!!!!

Whatever that means!

Are they, umm, serious? They are aren't they. Are they? Really? Have people
really made those comments? Is that... umm... no...

....it's a joke... isn't it?

Cheers,
Kim.Cool! Please tell me there is a Mac version.

I admire your calling of the bullshit. One thing I hate about the earbud is the lack of bass, especially when they don't stay in the ear very well. This bud's not for me.

I think "CD Quality" has become just another meaningless advertising button, like "all natural." That's what I want . . . some all-natural, cholesterol-free, hypo-allergenic, dairy-free, sugarless, CD-quality, organic earbuds.

Imagine inorganic food...

What would it be, like... fiberglass??

And sodium chloride (salt) got blurred into "sodium".

Oh yeah, put a sprinkle of SODIUM right there in yer soup...

Don't get me started.

The Big Reverb is happening. It is a little dsp hungry but that's
to be expected. I dabbled with it on snare in a rock tune and
it came up with the stuff. =20

I will need to study it a bit more to understand where some of the=20
ringing is generated from. The density is quite nice. I hope that
Mike can add 1-3 controls to globally control all 16 parameters as one.
That would make sense to me and make it more easily editable.

Either way it is well worth a few bucks to add to your library of plugs.
Tom

  "Mike Audet" <mike@...> wrote in message news:473cc8e1$1@linux...

  Hi All,

  I'm am very proud to announce the release of the Big Reverb!

  The "Big Reverb" was an unfinished algorithm that had been commented =
out
  of the original PARIS stock effects source code. It includes 32 (!) =
configurable
  early reflections, 8 configurable diffusion times, and 12 configurable =
reverb
  resonance times. This reverb is one of a kind and sounds awesome!

  This is not the reverb created by Matt Craig, but a completely =
different
  algorithm. =20

  As always, you can download it at www.ensoniq.ca.

  If you find this plugin useful, please shoot me some cash. I'm broke =
as
  hell.

  All the best!

  Mike

>>I wish.... This one goes "brrrrrrrrrfffffff, burrrurrrrrrfffff, burrrrrrrr"I'd take a sponge bath in that car anytime. heheMiss Beatrice, the church organist, was in her eighties and had never been married.
She was admired for her sweetness and kindness to all.
One afternoon the pastor came to call on her and she showed him into her quaint sitting room.
She invited him to have a seat while she prepared tea.
As he sat facing her old Hammond organ, the young minister noticed a CUT -glass bowl sitting on top of it.
The bowl was filled with water, and in the water floated, of all things, a condom!

When she returned with tea and scones, they began to chat.

The pastor tried to stifle his curiosity about the bowl of water and its strange floater, but soon it got the better of him and he could no longer resist.
"Miss Beatrice", he said, "I wonder if you would tell me about this?" pointing to the bowl.
"Oh, yes," she replied, "Isn't it wonderful? I was walking through the Park a few months ago and I found this little package on the ground.
The directions said to place it on the organ,
keep it wet and that it would prevent the spread of disease.
Do you know I haven't had the flu all winter."Hi Tom,

I found that taking the early reflections out out of the reverb by setting the ersend to zero helps get rid of the ring. A bit of the ring actually sounds nice on acoustic guitar, which is what I was testing it on.

As for the controls, the various size controls scale the 40 or so controls on page 2.

Hope that helps!

Mike

BLOCKQUOTE></BODY></HTML>

------=_NextPart_000_0101_01C8283E.3FF540A0--I have been doing the go-round with Symantec email support for a
week now and nothing they make, none of the 2008 products
will install on the Dell laptop. (Inspiron 6400)

Man, I have gone through page after page of their suggestions
and tried everything the suggest and nothing will install.
Not Antivirus, not Internet Security, not System Works, not
nothing.

A ballpeen hammer would make me feel much better right now...

Ideas? Are there better products, that actually install, for
these uses?

thanks

Rich,

I'm not familiar with this machine, but as far as software for the RAID
array, the card should provide drivers and a RAID utility to configure the
drives.

DeejAlternatives? Anything is better than Norton, imo. Sounds like it's now
resorted to locking it's own
install out in an attempt to prevent you from harming your computer -
definitely for the best. Probably
the best move Norton ever made. lol.

TCB and others will have more and better recommendations, but you could try
AVG's Antivir
http://www.grisoft.com/doc/1

btw - is this a Vista laptop?

Regards,
Dedric

It's Vista-ready they say, but is XP at this point.

thanks!

http://www.free-av.com/

Norton Corporate Edition is actually tolerable.

That said, the 'classic' virus attack is less and less what to worry about.
I'd be more concerned about phishing and that sort of stuff.

And, of course, you could just put Debian on it.

Dammit I am just about ready to put debian on it...

Problem is that all my analysis and DSP controller aps won't run on it.

DC

does antivir protect against anything but viruses?

rod

http://www.reuters.com/article/technologyNews/idUSN136311652
0071114?feedType=nl&feedName=ustechnologyThe free version is virus only, the higher end pay
stuff has more of the 'spyware'
type stuff. That said, rootkits, phishing attacks and such are a different
kettle of fish. Surf smart, go easy on the porn, be careful with email attachments,
don't connect to public networks unless you have to, and keep the Windows
firewall on because it's actually pretty good. Oh, and pull a ghost image
of your setup before you connect it to a network.

It's easy to make a computer secure, just unplug the network cable and turn
off the wireless adapter. It's hard to make it useful and secure though.

LOL!

Cheers,
  -Jamie
  www.JamieKrutz.comFirst, the Transperformance predates this by quite a bit. So the article is wrong and Gibson is knowingly wrong. Shame on them for making that claim of "first."

http://transperformance.com/

Second, Gibson is just using the tech from Tronical:

http://www.tronical.com/

You can put the Tronical system into your own guitar, although the officially supported models are fairly limited right now. LPs and strats, basically.

Or, if you can do your own basic tuning, the various Line 6 Variaxen let you dial up instant alternative tunings via DSP for less $$. Not quite as good as actually tuning the strings to alt tunings but very usable, and faster.

Cheers,
  -Jamie

DCThanks Chris,

The one thing that always works from Norton is the
Norton Removal Tool. I just pulled all their stuff off the
computer and it worked great!

>Okayy I am trying out the AVG Internet Security 30-day trial.

It is scanning right now. Looks like it actually works...

Damn Norton. I have literally days invested in trying to
get that garbage to work... grrrrrr

Now I want a refund. Fat chance huh?

Hey, what should I use for a utility app? Something to
sort out HD issues and problems with the OS?

thanks again everybody!

DCIt doesn't appear to be the same technology as the "Transperformance" I
played Sonny Landreth's Les Paul with
Transperformance...Awesome..HEAVY(weighed about 15 pounds)They are making
him a Strat with much smaller ,lighter components. He used 10 different open
tunings,and never touched the keys all night...It cost's about
$10,000...wonder how much that Gibson will be...

I think $2500 was mentioned.

But only about 900 Euro to get the parts for your own guitar, direct
from Tronical.

Cheers,
  -Jamie

non-motorized tuners.

However, if it has to have enough string wound around the tuners to
allow alternate tunings, I wonder how well it would stay in tune while
playing, with all that extra string length wound around the tuner posts?

Anyhoo, it'd be fun to try out.

The next step would be to use those individual string piezos on the
bridge to drive a variax circuit while also using the pitch detectors it
already has to drive a MIDI output...I need a guitar like that or I will
die... ;^)

Cheers,
 -Jamie

great help as always.

Funny, because Norton Utilities has always been the
gold standard for teching macs...

It's running great now with AVG Internet Security. My only
gripe with it is that until the computer fully boots you get
all kinds of horrified warnings about this or that component
of the app not running or being disabled! Once the thing

fully boots, all is well, but that is pretty clunky.

thanks

DC

>Sooo, Plato, Aristotle, and Descartes are all getting on an
airplane and the stewardess asks each if they would like a drink.

Mr. Plato, would you like a drink?

Why, yes, I'll have the 7up.

Mr. Aristotle, would would you like a drink?

Why yes, I'll have the ginger ale.

Mr. Descartes, would you like a drink?

I think not...

and POOF, he disappears!

heh heh

OK, that was silly...

A man is speaking with God. Ha asks God:

Is it true that to you, a million years is like a second?

It is true...

Is it also true that to you a million dollars is like a penny?

That is also true...

Then, could I please have a penny?

God glances down and asks:

Got a second??

Ok ok one more...

A philosophy professor finds a lamp with a genie in it
he takes it to his staff lounge to show his colleagues, rubs
it and is granted one wish only of three by the genie:

He can have:

Great beauty

Great wisdom

or

10 million dollars...

Immediately he asks for great wisdom. Instantly he is granted
his wish. But, he holds his head in his hands and beings to
weep. His colleagues all ask, "what have you learned?
what will you say with your great wisdom to us??

I SHOULDA TAKEN THE MONEY.....

BTW, those Car Talk guys are MIT grads. I love their show.

DCThe French existentialist Jean-Paul Sartre was sitting in a cafe when a waitress approached him: "Can I get you something to drink, Monsieur Sartre?"
Sartre replied, "Yes, I'd like a cup of coffee with sugar, but no cream". Nodding agreement, the waitress walked off to fill the order and Sartre returned to working. A few minutes later, however, the waitress returned and said, "I'm sorry, Monsieur Sartre, we are all out of cream -- how about with no milk?"

I have one of these:
http://www.fretlight.com/videoindex.html

I have a friend here who is a luthier and I have been thinking of getting
him to help me gut this thing and transplant it's organs and neck into a
Variax. I suppose that while we're at it, we could add the Tronical and a
Roland GK 3

;o)

oops.....didn't mean to start a separate thread...

Right around this time mine showed up at my local ensoniq retailer. I had already spent about $2000.00 for a computer with at Pentium 200, 512MB of RAM running Windows 95 an IDE system drive, CD burner and and a pair of 2G Seagate Barracuda SCSI drives.

After all hardware and software was loaded, Paris crashed nonstop, no matter what slot, IRQ it was using.So, I go to Symantec today to ask for a refund on the POS Antivirus 2008 that would never install...

First you have to install some app to chat with them about your problem, whereupon a nice Indian gentleman asks what problems you could possible be having....

AND, he asks me if I would please try installing the app, just once more...

ARRGGHHHHHHHHHH

HELL NOOOOOOOOO! never. ever. no no no.....

Then you tell him a bit of what you have been through, give him case numbers etc etc, and he tells you that you need to be transferred to tech support for further assistance...

Nope, not gonna happen... I tell him.

The product is defective -- I want a refund. Now.

So he says they will credit my card back and gives me a case number...

We'll see.

I did have the fun of yanking everything they have ever made off my computer however...

DCI think the forum started more around Jan of 88, or was it 98 :-) I do that
all the time!

Nick was running behind shedule but hoped to have a demo up by tomorrow
morning my time...noon-ish your time

Question...how long would it take to redo your piano track (if need be) to
play off Nick's vocals?

TTYS

DonYup me two. Sometime in Nov of '97 my bundle 2 showed up. I dug it then
and still dig it now. Upgraded within six months to the MEC with one 8-in.
Currently, two MEC's, three 8-in's, three EDS's, two C16s and two IF2s.
Still get compliments on how rich and warm the sound is.
Wayne

Must make sure the system is working again by then. ;o)

I wonder if we can think up some kind of appropriate celebrations for the ten year NG anniversary. Might at least signal time for me to do an update of the links page. ;o)

Cheers,
Kim.

My first Paris project started soon after I received my system. He had done the drum, keyboard and bass parts/arrangements in and old Yamaha synth and we tracked it from the mono output. I tried to "stereoize" it and then I dubbed the guitars while he and his buddies tracked the vocals. I hadn't played a guitar in a while really wasn't expecting to have to. I didn't know WTF I was doing behind the board either.....not at all.....but it was fun.

I'll never forget the horror I felt when I heard that tracks from this were being played on Dr. Demento and that one of them was featured in some frat movie.....as if this was about me at all.

;o)

;o)I didn't even know something like this existed!!!

http://www.asus.com/products.aspx?l1=3&l2=11&l3=307& amp;model=1480&modelmenu=1

4 x PCI slots, 2 x PCIx slots and a PCIe for the graphics
card???.....cpapble of supporting Intel Quads????

My UAD-1 PCI cards could go in the PCI slots and my RME MADI and AES32 could
use the PCIx slots.....right???

This may be a solution to my dilemma of moving to a 64 bit OS and still
being able to keep my PCI/PCIx compatible hardware without either having to
take a bath selling it and moving to PCIe hardware or spending another $2-3K
on a 64bit capable expansion chassis.

Tell me I'm not dreaming???Nevermind....those are PCIe slots, not PCIx.

"Marvelous" what we could/can do in a small appartment with acoustic
instruments and some synths. I had the controllroom in a little
bedroom and we used 2 small rooms for the recordings, the biggest was
about 13X13 feet.

I'm just askin', and I'd rather get the info from you guys than a
sales-person. Anyhow, this is a serious bunch of questions. Worlds hang in
the balance ;-) A firiend of mine is considering buying a Mac Book Pro with
the following specs

Apple MacBook Pro Notebook Computer Features:
15" widescreen display
..2GHz Intel Core 2 Duo
667MHz frontside bus and main memory
2GB 667MHz DDR2 SDRAM
PCI Express architecture
120GB 5400rpm Serial ATA hard drive
NVIDIA GeForce 8600M GT graphics controller
ExpressCard/34 slot
One FireWire 400 port, one FireWire 800 port, two USB 2.0 ports
Slot-loading SuperDrive
Mac OS X Tiger

He's got an MBox for an interface, FW output. 1999.00. He's pretty
committed to using a laptop -wants to be able to bring it to possible
(occasional) gigs, and to friend's house to do some lite duty recording.
He's really interested in Live. Any thoughts on the laptop? (One thing I
generally don't like about laptops is that I can't get in there and replace
or upgrade components like I can in some sort of tower configuration. Is
this true for macbooks, or are they more accessable?) Can this thing be
loaded with a second drive or do you have to use an external HD? If so,
what's fast enough to do audio production? I'm so used to setting up
internal drives and only using external drives for backups. I'm also
wondering if Live will be able to work with his Mbox. As I understand it
though he's probably going to buy a separate audio interface for the laptop,
so, if any of you kind folks have thoughts on other portable, laptop
compatable interfaces I'd be interested in hearing them. I'm guessing his
budget will probabaly be around 500.00 for the AI.

------=_NextPart_000_0009_01C829C6.FD80CFC0--HI DJ,
At this point I'd rather see a motherboard with 2-16x PCI-e, 1-4xPXI-e,
4-1xPCI-e

Oh and all the Opteron Quad core motherboards won't be available till
the end of the year. We already lined up 2 to test. Hopefully they will
at least equal the power of the output of the quad Xeons.
The current Xeon chipset board have got way to many bus issues for us to
promote.
Chris

> (859) 635-5762I decided to wait until Macworld Expo in early January to get a laptop
to see what is announced. But that's mostly because the 17" doesn't have
LED backlighting yet. The 15" already has LED backlighting.

I presume you mean the 2.2GHZ Core 2 Due. That should be plenty fast and
is the most affordable Macbook Pro. The 2.2 implies a 128MB graphics
card, the smallest currently offered. That's still plenty for almost all
uses including audio. I'd go for the 256 option myself (or larger if
available when I buy) only because I use Apple's Motion compositing/FX
software and some animation software which would benefit from more
graphics RAM.

MacOSX Tiger (10.4) is one version back, the current version of OSX is Leopard (10.5). Tiger is fine, I still use it for now, but he should make sure he gets update disks to leopard included with the purchase if it's a new machine. Otherwise it's an extra $130 for Leopard (discounts available at Amazon and elsewhere).

An external drive should work fine for audio. Choices are Firewire, USB 2 or a SATA interface card via the card slot. SATA would be fastest but depending on his needs FW or USB may be fine.

I HAVE heard of someone pulling out the optical drive and replacing it with a second internal hard drive. He might check into that. Probably not easy though.

I don't think the HD is user-replacable on the Macbook Pro, although it IS user-replacable on the Macbook. I hope they add that to the MBP in January (I have no evidence they will, just a hope). Despite it not being as easy as the Macbook, some people HAVE replaced their own HD in the MBP - google it, there are probably instructions.

RAM is easily user-replacable on all Mac laptops. Apple's RAM is overpriced. If he wants to max it out at 4GB he can buy a couple of 2GB sticks from crucial or another reputable supplier and save hundreds.

The current laptops and those one generation back are often available as refurbs at the online Apple store if he wants to save a couple of bucks, or discounted at Amazon or a few other dealers. If he's a student or teacher there are educational discounts.

For even more savings at the same CPU speed, the regular Macbook is another option. Pros: more compact; the HD IS user replacable; and it can take the same maximum 4GB of RAM. The MacBook was just updated within the last month or so. Cons: no expansion card slot; I think the firewire is 400 not 800 (note: I use FW400 on my G5 for my FW audio interface and it's fine); slightly smaller screen; no LED backlighting yet; slower integrated graphics system (which may not matter much for most people, it's still pretty fast for general use).

I can't answer the MBox and Live questions, other than they ought to work fine, as should other interfaces and Mac audio software. It will probably come with Garage Band which can do light duty recording out of the box.

FWIW the MOTU 828MII firewire interface has worked well on my G5, and my wife has been liking the TC Konnekt 8 firewire interface on her G4 Macbook.

Cheers,

-Jamie

Is it a refurb or used? Apple has only offered 2.2ghz as the smallest
CPU choice for a few months now.
> 667MHz frontside bus and main memory
> 2GB 667MHz DDR2 SDRAM
> PCI Express architecture
> 120GB 5400rpm Serial ATA hard drive

I would get the 160 gig 7200 gig drive. Depending on how large is
projects are it may keep him from dragging around an external drive.

The current models are coming with Tiger installed and separate Leopard
disks. Not sure how much longer they will be doing that before just
installing Leopard.

>

He will have too much stuff to bring around if he is just going back and
forth to friends houses. Laptops are allot faster now. The hard drive is
the only thing now that is slower than the the equivalent desktop.
> Is this true for macbooks, or are they more accessable?)
Mac Book Pros are no different than PC laptops at this point. Made at
the same factory.
Here is a list of stuff that has to be repaired at an authorized Repair
center or at Apple.
Monitor
Motherboard, this includes usb,firewire, nic, express slot, video out
and video card.
keyboard
touch pad

Here are the field replaceable/upgradeable internal parts-
hard drive
ram
dvd drive
> Can this thing be loaded with a second drive or do you have to use an

> external HD?If so, what's fast enough to do audio production? I'm so

External only but the internal drives are gonna be fast enough for most
things as long as it is a 7200 rpm one.
> I'm also wondering if Live will be able to work with his Mbox.
Haven't tried the fire wire Mbox with Core Audio apps. Not sure all the
I/O and if the performance is as good as other audio devices.

> As I understand it though he's probably going to buy a separate audio

$500.00 range I would go for a MOTU Ultralite. Most all of the cheaper
units from Presonus, Focusrite don't have very good low latency performance.
I would test the MBox with the laptop and if it works just bring that
around instead of buying a 2nd one.

Oh and get the Apple Care Plan. You barely have any warranty otherwise..

The above configuration can have 4 gigs of ram for only $100 extra when
you get it from us. :)

> (859) 635-5762Well...hummm.....both my Magma's are compatible with the PCI-e host cards. I'm thinking that a single Intel 45nano Quad might be sufficient for my needs running XP64. Seems like single socket quads are getting good press with Cubase and UAD-1 cards at very low latencies. Is it possible to run XP 64 and have the advantages of some additional RAM while using 32 bit Cubase 4.1 and 32 bit PCI/PCIe Magma host cards in my DAW or would I need a 64 bit expansion chassis to make this work. ??

I'm hopelessly confused about this.
;o}

LOL!!!!....that was very funny

;o)Happy Sunday to you all.,

DJ and others, haven't you all been following the Vista OS post here? Those

of us on the PC (Windoze) side of personal computing are at a cross road.

-If you run a Steinberg DAW, then there are first issues with Multi core
(4) processors taking advantage of all of that power.

-Win Xp (32/64) is not giving you anything as far as performance. Nothing
to write home about.

-Ms Vista is a ways off from being what pro audio needs it to be.

All in all, it's time to stay pat until the above issues are worked out.

OR
-Explore the Apple route and give Logic Studio a try.
-Stay with windows, and give Digidesign a shot with version 7.4.

Myself, I'm good where I am. My DAW's can achieve more tracks than I can
use with plugins galore..

Until, something comes along that's truly revolutionary for what I do, then
I'll bite. But, until then, Paris, Nuendo, & Pro Tools, Acid Pro, Alesis
HD24 & Reasons are the tools that are getting the job(s) done ..
Good luck exploring.. :)

Having said that: I'm really leaning towards Digi's new C24 controller. Along
with any of their software versions, amkes for a killer package. And, mos
importantly, it will attrack potential customers with it's professional looks.
I for one, prefer a controller that's "tighly" integrated with it's Software,
like Paris & C16..

Another is the secret from Euphonix. Their supposed to have a more affordable controller. It works like the MC-5 setup,and in the 8,910k range, that could be what all of the Nuendo/Cubase/Logic uses have wanted for along time.

Yet another hot controlelr option is the Tascam DM-4800 . This baby is picking up all kinds of steam in our market. Since the demise of Mackies DXB, Tascam is one of the only (Yamaha) who's has a very attractive product that's DAW friendly: Firewire,Cascadable, decent pres (24) , Talk Back setup..DAw conroller (Steinys,Logic, ProTool, Sonar, DP)..for a price thats not insulting (under 5k).

I have learned that a big mixer, or big time looking Daw controllers gets you more business then a Star-Ship Enterprise looking setup. .

Another 2008 option, is the Tascam DM-4800 mixer.

Just re-read through all of Tom and Ron's troubles. Must be the season change, or an extended moon phase sort of fx.
Started getting some crackles yesterday. Actually a sort of popping crackle. I'd get one pop on the right channel, followed closely by another pop in the left channel -like half a second later. No audio playing. The system just idleing. I noticed that the longer I left the rig on the more time between the pops, until they finally disappeared. Almost like the system needed to warm up.
Any thoughts. Unfortunately, it feels like a hardware issue. I'm going to reboot tonight to see if it comes back. If so, I'll try re-seating etc...
Thanks
MR

Have you tried saving to another / external drive, if you still can't I would guess somekind of privilege status not set properly in windowz maybe. Your other apps are saving fine are they? All your drives are showing up in the bios boot sequence? Fat32, NTFS issues?

Good luck
Rob

JohnI don't think I have that code but you can check under Bugs and Troubleshooting

http://kfocus.com/paris/9652 rocks ! what a great card. it's so amazing to have a full band playing
for days on end and not have any crashes. it's really like making music.
what an odd feeling for me.

JohnHi your harddisk is full !!
:)

www.adkproaudio.com
chrisl@adkproaudio.comI'm wondering if I will have better luck making a
quiet-enough-for-the-control-room pc with Intel or AMD. Any data on
which runs hotter these days?Bill,

I think it's more up to the cooling systems that's available than the
CPU nowadays.
I'm using powersupplies with 120 mm slowly going fans that's giving a
noise of max 16 dBA in my systems:
http://www.chill-innovation.com/chill-innovation.asp

To cool down the cpu, I'm also using 120 mm slowly going fans like
this with speedcontroller:
http://www.northq.dk/products/coolers/nq3312.html
This product are just giving noise from 12 dBA on the slowest speed.
Both computers (AMD 4200X2 and 4000 Athlon) are cooling very well with
the slowest speed on the fans.

Be aware that a motherboard must have enough place to use these kind
of coolers, if it's an idea to try these kind of thing.

By the way, there's oceans of nearly silent cooling systems out there
on the net. Aircoolings, watercoolings etc....

In general right now the current Intels are are running cooler.
Use a 3rd party heat sink. They will better dissipate the heat with the
low rpm fans.

Yes to make it more punk you need to plug in the sm57 into a peavey tnt
bass amp then crank it and put another sm57 close miced at the cone.

That sm57 then need to go to a Tascam 424 the out to a mackie mixer then
to DJs rig.

short? there are over 500 posts there, I seem to recall... !

just for that, I'll have to update it and add the posts I've collected over
the last two years...

I like that Parisite site. Ha!

-lazy steveAs strange as that sounds... I had a singer for a band come in once with
two small combo amps, an old beat up Radio Shack mic, and an assortment
of bad cables. I thought he was the guitar player, but soon found out
he was the lead singer. He plugged the mic into the two amps with the
menagerie of adapters and cables. I put a '57 on each amp. Once the
music rolled, he was bouncing around the room screaming into the mic
cupped with both hands. The resulting distorted mess was indeed the

lead vocal track. He was really happy with the sound I got... :-\

David.

>Alright, kids. Thanks for chiming in.

I am able to save a project onto my "C" drive, but not onto my "E" (audio)

drive. I haven't tried to render a track onto my "C" drive, but I'm sure
it would work.

I suppose I can do some work tonight and just work with the project on my
"C" drive, which is fine for now, but it's not a great long-term solution
for me, as me and Swen regularly swap hardrives between computers. Are you
guys still using seperate drives for audio? Is it even necessary, strictly
speaking?

Maybe some of Rob's iideas are on the right track?

Thanks,
Jimmy

message news:47433689@linux...
> DJ :interesting, no issues between UAD and powercore?

None so far. I've got about half the resources of the POCO being used along
with about 60% of 4 x UAD-1's in a 20 track mix right now with no glitches
whatsoever. Keep in mind that this is the older Mk1 PCI card and it is
riding an IRQ that is not shared by any other device in the computer. It's
nice having this to supplement/complement the UAD-1 processors. I think the
TC FX are pretty darned good. Very different from the UA, but that's OK.
I've got plenty of UAD-1 processors.

The Megareverb is easily the equivalent to the processors in my TC M2000. I
could probably get by on this and the UAD-1 Plate reverb and sell all my
outboard rack units in a pinch.

I'm getting lazier and lazier as time goes on about using outboard gear in
mixes. Plugins are really getting good these days (or maybe I'm just so used
to hearing them that I've finally accepted their sound).

Hard to say.

Things are pretty sweet with the Multiface and the MADI. This gives me 24
RME AD/DA's, with 24 ADAT inputs for incoming VSTi's and a couple of extra
left over.

I'm finally feeling like I'm getting where I need to be with this system.

DJ

>>Oh my god, you're right! Yay Dimitrios!

Pardon my language, but what a complete dumbass I am. It's a good thing I'm
a musician and not a computer scientist.

I am ashamed, so very ashamed...

And so we push onwards.

BTW, me and Swen just signed a licensing deal with a pretty successful company.
These guys have had several lucrative placements with film and TV, including
"Grey's Anatomy", so we're pretty excited. They came looking for us about
a week after we started handing out CDs to friends for feedback after years
of working on this music, so we feel confident they are going to work hard
on our behalf. We're excited!

I just wanted to apologize for being so stupid. I wasted your time, and I
wasted my own as well. Thanks to all for help.

And thanks to Dimitrios for his kind insight.

For the record, and for the FAQ, that particular error code means "Your hard-drive is full, dumbass."

Just for the record.

Jimmyha ha I have rune vocals out into my practice PA and re amped them! But really, the greatest punk band of all times (and one of the greatest rock bands) recorded their greatest record's vocals through a 58 beacuse the singer's teeth we so fucked

He's going to send me an old POCO he's got lying around there and we're gonna' try for a second Powercore in the Magma. 2 x POCOs and 4 xUAD-1's on a DAW. that sounds like fun, duddn't it?

;o)Hello, hello.....any ideas about a couple of error messages; we know 7/7 is IRQ conflict, even though device mgr says "no conflict" Paris wants 11, so does video card, so does IRQ holder...2 times !! Trouble is, can't change IRQ number, not allowed in OS (98SE) How to change it in BIOS...I'm not in there much !
Also, anybody know error 40/48....finally, why would anybody buy up a program as sweet as Paris, put it on the shelf, and leave us with ProFools, Cubes, etc. etc....
just cranky tonight, I'll be better tomorrow.....pieces, CedThis is what I thought, sounds like it too! If oyu ever youse a Roland Space Echo, the different ins can be out of phase..Actually I mixed a tune with Paul Kolderie using my 201 and he did not know this!

Hey we need all the traffic on this site we can get!

Remember that funny tv ad where the young guy interviews with the
president of the Dumbass company? He tells Mr. Dumbass what a good employee
he would be and how he would fit right in at the Dumbass
company etc?

Then the president slowly growls"

It's Dumas...

It's like that... We're all dumbasses just depends on the day which one gets the duty..

DCHi Guys,
This is Terry's wife. He's out of town and unable to access a computer so he asked me to check his mail and post a response. He appreciates all of the help. Demetrios he'll be checking your post about "Chainer". Also, he says that he did make a separate VST plugin folder. Thanks again to all.

"John" <no@No.com> wrote:
>
>just make a drive image and then you can try every vst under the sun and be
>back in 5 minutes when you hit a mean one.
>
>JohnIsn't that just a myth? (I guess you're talking about Sex Pistols - Never Mind The Bollocks). I saw a TV-documentary of that recording, and mr. Lydon didn't use a SM 58 in that footage.
Another myth is that they recorded hundreds of tracks to make Steve Jones' great guitar sound. That's wrong, he had already found "his" sound, with a combination of guitar, amp, distortion and chorus. They just recorded one guitar-track, copied it to another track and panned opposite. The guitar is simply in dual mono. Then a track or two with fills, and that's it.
And they didn't have a bass-player at the time, Steve Jones had to play that too. It's played exactly as the guitar, only one octave lower. The sound, the power and the mix on that record is incredible. "We mean it maaan!" (Vinyl version that is, they took away some of the magic when they mastered the CD-version).

>Regarding IRQs, the lower the better. In your BIOS, disable everything you can. LPT1, COM1, COM2, onboard Sound, USB, anything you do not have to use. Then the EDS cards will find the irq and be happy. Check out your motherboard manual to see what slots share IRQs and make sure not to use them. If slot one shares with video don't put an EDS card there. If slot 3 shares with the onboard soundcard, don't put an EDS card there unless you turn the soundcard off.

I don't have a note for a 40/48 error but you can see my notes here www.kfocus.com/paris and look under "bugs and troubleshooting".

I never had a reliable setup with paris so i switched to cubase. You apparently have never used cubase or protools because if you had you would not disparage them. When it comes to a DAW you can make great music with, they all can do it but cubase and protools are in the ferrari class and paris is in the edsel class. It's simply a 12(?) year old program that had a very small team developing it so it's just "not all that".

enjoyhahaha, nicely done sir !Heheheheh..No I refer to Mr Strummer and the album London Calling..Much more
monumental than Bollocks... I listen to LC at least every week..have not listened to the Pistols for 20 years!
I've seen pics of Lydon with an 87 or something.

The Clash were an amazing band... Listen to Bankrobber, Clampdown, Police On My Back, Pressure Drops, Magnificent Seven..man..great shit. Good at covers too.

Anyway there is a good piece on the recording of LC at mixonline. By the way..very well recorded in my opinion. Not screamy trash at all.

I think I hear phasor on Steve Jones during Anarchy For The Uk.

>What, two british punk-singers with bad teeth? :-)
Got London Calling, I saw the Clash when they were touring for the album. I
love it, but I don't think of it as punk, more as classic rock'n roll. (And
that's fine with me :-)
I used Pistols "EMI" as refererence on a punk-tune I mixed. Amazing things
going on there.

>and to those who don't have a long weekend ahead...sorry...Hey all, Is this computer any good?

Heard anything about it?

thanks

DC

 http://configure.us.dell.com/dellstore/config.aspx?c=us&
cs=04&kc=6W300&l=en&oc=brdd2fc&s=bsdOh, and no ,not for audio.

Just for general use and some power point.

For basic computing (word processing, email, web surfing, not overly
animated presentations) it is probably fine. THe celeron will be slower
and the intel graphics used shared memory insted of their own dedicated
(also slower).

Just my .02

JeffHi DC,
Like Jeff said for office internet use it will be fine. For gaming,
audio, video negative.

Chris Ludwig

ADK Pro Audio
(859) 635-5762
www.adkproaudio.com
chrisl@adkproaudio.comIt will just be used for Power Point and general stuff. No gaming, no audio no video.

Thanks guys!

DCI assume you're keeping the cost down purposely. Celeron will be slower, get 2 GB of RAM on it, and stay away from Vista anything... go WinXP.XP home for well, home use and Pro if you need to join a domain. For basic house/small biz you should be good for 2~3 years. Oh, get a DVD instead of CD because so many things are going to start shipping their installers on DVD now/future. Besides, for the price difference these days it makes zero sense to limit yourself over $30-$40 between the two options.

No gaming, video or audio production for this puppy, but it'll do the above well enough. Don't buy into the demoware crap Dell loads on it with McAfee or Norton. Instead use AVG for AntiVirus, Zone Alarm for a free firewall and Microsoft Windows Defender for Anti Spyware. If it doesn't ship with internet explorer version 7, get the free upgrade to that at microsoft.com and make sure you install Microsoft Update at the same place (or more directly, at update.microsoft.com).

cs=04&kc=6W300&l=en&oc=brdd2fc&s=bsdHey everyone,

Just wanted to pick your brains and see which video card would be the best
to upgrade my P4 2.4 Ghz machine running paris. Any suggestions would be
appreciated. I'm going to be using a 22" LCD Viewsonic screen with it as
well, which is 16:9 widescreen monitor. Not sure which video card would
work best with this situation. Again, my machine is P4 2.4 Ghz HT.

JohnnyHappy Turkey everyone!It's a charity thing for my teenager's youth room at church. They
have
NO money and want to do Power Point for lyrics and that sort of
thing. A dual head vid card would be a nice thing, but anything is
better than what they have, as long as it doesn't break. Being that it will

be paid for by a donor who has little money themselves, cheap is really
important. I just want to avoid it if it is a hand grenade...

BTW, I could not for the life of me figger out how to disable AVG Internet
Security! I liked the product, but I had to connect to a DSP box that
uses static IP addressing and antivirus programs almost always won't
let you do that. Being that I was offline, and only using the box, I
needed to disable AVG and could not find out how to do so. Ideas?

I am trying the demo of Eset Nod32 at the moment, and it is easy
to disable, runs fast and seems to slow down other app less than the
others I have tried. Do you like that as well as AVG?

It's funny, I have spent so much time with the PC in the last 2 weeks that
for the first time, Macs seem kind of odd and foreign to me...

Never thought that would happen.

thanks for all the help

DC

>Sounds like you got a demo, not a free version. I.S. is not free, only the
AV. Firewall should come from Zone Alarm. Anti Spyware from Microsoft. Make
sure you get AVG Free from http://free.grisoft.com and uninstall anything
else you have.
 http://free.grisoft.com/doc/downloads-products/us/frt/0?prd= aff

The direct URL is
http://free.grisoft.com/filedir/inst/avg75free_503a1205.exe for the current free version. Be sure to read the EULA but it sounds like a non profit scenario, which I believe fits in with the EULA's I've seen in the past for AVG free.

http://free.grisoft.com/filedir/doc/AVG_Anti-Virus_Free/User _manual/avg_aff_uma_en_75_9.pdf is the manual.

Save, not open. You want to keep the installer and manual on the hard drive somewhere in case of aw crap situations.

FYI, power point (and other microsoft office products) readers/viewers can be had at

http://www.microsoft.com/downloads/details.aspx?FamilyId=048DC840-14E1-467D-8DCA-19D2A8FD7485&displaylang=en

If you do need to purchase MS Office, look into the different licensing to see what fits your group.
This could allow you to use an existing license on another machine to build the file and not have to purchase one to play it back on the machine you're considering - if that fits your situation.

If you're not bent on using MS products, open office has some pretty neat tricks. Impress is the program your after. Again, freeware but you should confirm the EULA fits.

Home have so much more depth....Another classic and very well recorded album
is The Jam, All Mod Cons...Wow! My wife is a brit and she actually relates
more to The jam than The Clash...English Rose is lovely and so is didn;t
we have a nice time

By the by...a big influence on all these bands was a reggae band callled
Culture..please listen to 2 Sevens Clash Oh and don't forget my band The
Blizzard of 78 collaborated with reggae MC great Mikey Dread on a clash tune...
listen to it on Itunes..He is very sick right now.

>hey, John-

give Ced a break. I told him to post here, and said all the bright Paris guys would undoubtedly be able to help him. In fact, I said all the bright Paris guys would fall all over themselves, rushing to show off their vast knowledge and help him.

I didn't think the first post would disparage him for trying to get his Paris system working like it used to. If I had a nickel for every post on this newsgroup that disparaged Protools and Cubase I'd be a rich guy. Ok, maybe a dollar for each post...

He's a musician, not an computer engineer. Have mercy on the guy.

The reason he likes Paris is the same one I do.. no latency. No latency with an old computer, yet. And, as a matter of fact, every time I turn on Paris, I do enjoy. A lot. I have two stable Paris systems, one on an old Mac and one on an XP machine.

Ced has had many successful years of using Paris and Windows 98, but his machine's hard drive is maxed out. I urged him to stick a big hard drive into it or else bite the bullet and get Paris running on XP. So he did the XP thing (I think on a newer computer), but can't get the insert FX to work (I think), which I seem to remember has something to do with not installing on XP exactly as directed. I assume someone here will tell us exactly what causes that, since I can't seem to locate the exact post which tell.

I already pointed him at your help site (couldn't find the exact page that he needs at your troubleshooting thing) and to Doug's site.

Thanks for the good tips. I'm not a Windows guy. I think one problem of communication

is that Ced asked some general questions instead of giving you an exact rundown
of his system and his exact problem.

I'll try to get him to post a more explicit description of his system and
his exact problem.

If I can get him on the phone. . .

This is the giddyup !

Cubase 4.1, 2.6 e6700 core2 duo, intel D975xbx2kr MB, 4gb mushkin ram, XP Pro, 24" westinghouse LCD
RME 9652, 3 Presonus Digimax FS, Rane HC6 headphone amp, 3ms latency
My Cubase Notes for YOU: http://www.kfocus.com/cubase/and bestbuy has an emachines with 17" flat panel tomorrow for $199 !!!A very savy IT guy I know recommends Nod32. It uses a different approach
to anti virus detection. I believe it looks for behavior that would
indicate presence of a virus.

Hi Cedric,
Happy Thanksgiving.

If Paris EDS card(s) are sharing IRQ with graphics card move your
EDS card(s) over one slot and see how the IRQs line up. If they
share with graphics it'll never work in my experience. Moving the

EDS cards in the available slots is your easiest fix without messing
with software and the bios. =20

If you want to mess with software go to the bios and disable all
the things you aren't using like USB (unless you are using it for a =
drive
or mouse), onboard sound card, parallel port, serial port, Firewire =
1394.
This will buy back a few IRQs from the start. You may not have to move
your EDS cards if you're lucky here. =20

We've all been down the road you're on many times before. Patience is
critical.

Good luck,
Tom

Turkeys! ooops, wrong day...

Nod32 seems to be working well.

>>>Hi John, thanks for the info , I actually have already tried this, but got
stuck 'cause I didn't want to get rid of any of those items...can't have
everything , I guess, also, moving to another slot made no difference....oh

well!.... and apologies for the disparaging...as mentioned at the end of my rant, I was having a bad day ! I have used Pro Tools 002, and got rid of it, just didn't like the way I got around in it....also had Cubase for a while, admittedly a long time ago, but I just like Paris, agreed it needs to be brought into the 21st centry, but that's why the rant! I guess I'm just a simple guy...don't need too many bells and whistles, just a well-laid out and intuitive system.

Thanks Steve for racing to my defense,but I did deserve a response like that..... and sorry I missed your Wed gig...hope to see youse guys at the next one.

>enjoyHey, Esteban....so nice of you to come to my defense...I take back everything I said about you ..(except for the REALLY nasty bits !) Actually, I deserved the response...like I said, I was crabby and just venting. And having used digi 002 and found nothing much to get excited about, as well as Cubase many years back, I still have a great affinity with Paris, it feels like you're working with something, instead of just pushing data around. And...yes ! No latency right out of the box, no dicking around with setting after setting! A good friend of mine who runs Digi 002 on a G4 was at the studio while I was doing a live recording on which he was playing bass, and he was blown away by the ease with which Paris delivered up multi in-out, playing and editing multiple effects on the fly on a crappy old computer running 98SE , still, I was being rude, and got my just desserts...cheesecakewalk

??
Sorry to miss yer Wed gig...hope to see ya at one of the next ones
Cheers!.....Ceddy, the Dark Side !

Whenever Thanksgiving comes around, normal people think of togetherness
with friends and family, good food and cameraderie and sometimes even
sincerely reflect on the abundance with which we have been blessed

I think of this,.

 http://www.veoh.com/videos/v185972b7EyRXgd?searchId=98859540 9536561947&rank=1

;o)I would disable everything conceivable until you get solid and then add things
back like usb and ethernet until you see the IRQ issue come back. It is
very frustrating and does take some time to get all sorted. hang in thereGreetings :)

they come in for the next weekend I'll have this project pretty together.

Here's some more roughs:

http://www.mediafire.com/?4z941bzx5zi

http://www.mediafire.com/?51dn5moc7yz

After tracking and mixing acoustic stuff for so many years, this is fun.

;o)Actually.....I posted the wrong "rough" of the second mix. I think this one
sounds a bit more balanced.

I really like the way the excited snares in the reverb ;oP.....sounds
so....errrr.....organic....

;oDHit control+alt+delete. That's windows task manager. Go to the processes
tab. Find:
avgamsvr.exe

avgcc.exe
avgemc.eve
avgupsvc.exe

End process those, and avg should be off. Restart AVG from the all programs menu. That being said, I've never had it interfere with operation (my serious recording pc's never touch the net except for updates if that is necessary) on my net boxes, so I've had no need to kill it. However, if you're happy with NOD, stay the course.

Sonds pretty cool over the PC speakers, Deej - is a bit
Pretenders-like, albeit with a bit more restricted vocal range.
What'd u end up using for the signal chain on the lead vox?

Haven't cut the vocal OD's yet. That's just the scratch track.....a '58 into a Demeter HM-1 preamp with drum kit bleed all over it. I processed it with a UAD-1 Neve 88RS channel strip and dialed up all the air I could before it started screaming for mercy. Not sure what we're going to use for the vocal path yet. I just snagged a Milennia Origin SST-1 over on the 3dB forum. It will be here next Thursday. I used one years ago when the first came out with my SPA U87 and it was a sweet combo on femme vocal with the tube preamp circuit and transformer switched into the signal path. Dubs are a week from Sunday so I think that will be on the menu. Also, the Peluso 2247, or SE Gemini paired with the Focusrite RED7 is turning out to be a nice sounding signal path on sources with fast transients. The RED has a fast VCA circuit, but it's not a "life sucker" and the tubularity of those mics plays nice with the solid state preamp circuit. The Forssell CS-1 sounds good with just about any mic (seriously). The other day I tried it with a Manley Baby Blue and it was a "holyshit" moment.....so we'll probably check that out too, though it's a bit of an aggressive sounding mic. I used a stereo pair of the Manleys on the drum OH's for this session.. Wouldn't surprise me though if we dust off the '58 again and just use it. Nothin wrong with a '58 and a Mackie, IMO. If it works, it works.Hello,
I read that some of you work still Paris with UAD cards.
Ok here is a brief summary if that could help.
First of all FXpansion gives 16384 normally latency.
If you though you will use the FREE Spinaudio DX lite wrapper and Chainer VST wrapper the you can use 2048 samples latency (my powercore does that instead of the 16384).
Also if you add another UAD plug then latency goes to 32768 !!
,With chainer though you can use the parallel fx adding which essentially adds one over the other which many times is a good thibg then latency stays at 2048 for up to 9 parallel UAD (powercroe) plug instances !
THEN if you have the Faderworks ad I do and many of you have bought you can dead easy compensate for that latencies with a quick move !
If you want to use the automation in realtime with the nowline bar then here is a tip.
Lets assume using faderwoks you detect an overall 8192 latency.
Then just grabb all you audio files across all submixes and move them ahead to overcome that latency.
If anyone wants deeper info let me know.
Regards,

DimitriosIs this what you used to record with?

http://tinyurl.com/2kt468Thanks DJ and Lamont. I was away last week, just returned last night.

Appreciated,
Rich

>Hi, hope ya'all had a happy Turkey day. Lamont and DJ thanks for the
responses to my earlier post regarding a an IBM x325 server. It has a
Socket-604 Xeon Dual Motherboard, with a Xeon 3.06 processor. I'm only going
to use one CPU in the setup as I know dual processors have been a problem
with Paris. Is anyone out there using Xeon processors successfully with
Paris and if so how do they perform? Any issues here?

Thanks,

Although many of you are used to this stuff, those of us out
here in the desert are certainly not... at least not this much,
this early in the winter. This is what I woke up to this
morning (pic attached).

I feel like the low end is not quite kiciking ass..Like too much compression or something. The kick could uses some more attack perhaps. I think the rythm guitar (clean one) could come up too. I'd find room for some percussion.

(hand claps?)

Nah, forget about the hand claps for moire percussive sounds-
add some of these...

http://www.walmart.com/catalog/product.do?product_id=5156065

lolAre there any guitar processor plugins you can use with Paris running on a
Mac?
Stevewhips and chains maybe?

Pistols are only one punk band. Claps are on lots of stuff. But actually
I think Anarchy has claps.Yeah, I think during or after the solo. Anyway..I
think this tune your working on is more "Alternative" than punk. (although
I hate that term) punk itself was not one real style more of a mind set..Oh
I think Iggy's now I wanna Be Your Dog has claps no?

>Thanks. I spoke with the DSP manufacturer and indeed, AVG does
interfere with their product. Once I uninstalled it, all was fine.
We wish that manufacturer would go to DHCP like the rest of the
universe, but noooo...

So far NOD is doing well.

Which reviewer was it that wrote that Sid Vicious played bass as
though he were wearing boxing gloves? LOL!

>Anyway..I think this tune your working on is
>more "Alternative" than punk.

I think it's more of a Retro New-Wave thing... i mean, like i
said earlier about it's got kind of a Pretenders sorta vibe,
dontcha think?

I'm a bit confused about this "snow" concept.

Is this "snow"?

-steve, living in another world

(actually, it's a winery where I played last week. A sunscreen job.)

------=_NextPart_000_0016_01C82A92.AD3D59D0--I'm getting ready to do some vocal OD's on a punk project I tracked here.
I've done a few rock'esque and pop mixes but mostly I've been dealing with acoustic instruments these days. Here's a very rough mix with the singer playing/singing in the same room with the drums. I had her guitar (panned right if facing stage) mic'ed up in an isolation cabinet and she was singing into an old '58 over the (very loud) kit. I'm sure it was hard for her to even hear herself in the cans but given the circumstances, I think she did a good job. Not sure what kind of mic I'm going to use for her voice on the dubs and what freq's I'm going to massage on the guitars to get more separation so that they will sound balancd and sit in the mix. This is a fun project but a very "brown sound".....something I'm not accustomed to working with. I'm going to have to tune my antennae in a different way for this one. I've already had one suggestion about cutting the rythym guitar freqs between 1-4k which I am going to try. I was kinda' fried last night when I bounced this down. This morning it sounds a bit heavy on the right channel. Any suggestions would be welcome.

http://www.mediafire.com/?7yin02vmcb0can't get the link to work for me.

ADK Pro Audio
(859) 635-5762
www.adkproaudio.com
chrisl@adkproaudio.comThe only way to cancel an efax account is via interactive chat. Odd, but here
goes the transcript:

{Megan F.} Hello, Chuck. Welcome to j2 Global online support. I am Megan, your online Live Support Representative. How may I assist you?

{chuck duffy} Hi, I would like to cancel my service, number ####. Not because of a problem, but because I don't need the service anymore:-)

{Megan F.} I'm sorry to hear that you wish to cancel. Could you please provide me your PIN for verification?

{chuck duffy} sure

{chuck duffy} ###

{Megan F.} Thank you for providing your information. Please give me a moment while I go through your records. In the meantime, please type the number corresponding to your reason for cancellation:
1) Moving to another provider
2) Bought a Fax machine
3) Business or role changed
4) Short term project completed
5) Financial reasons
6) Problems with Faxing or Billing
7) Dissatisfied with Quality of service
8) Too Costly

{chuck duffy} none of the above - haven't received a fax in over a year :-)

{Megan F.} In the current situation as a special consideration, we will waive off the monthly fee for two months. You can use the fax service with no monthly fee for the next two billing cycles. Please feel free to contact us at any time. This way you will be able to keep your local fax number, which will enable you to send and receive any pending faxes with your number.

{Megan F.} Your eFax account will be credited with $33.90 so that you may utilize our services without being billed our monthly fee for the next two billing cycles.

{Megan F.} Since you will not be charged any monthly fee for the next two months you may keep the account till then. If at all you find that you need our services during this period, then you will still have the account. If however, you still feel that you do not have any use for our services by the end of the two months credit period, then you can always contact us back anytime. Would you like that?

{chuck duffy} not, really :-) I haven't recevied a fax in over a year

{chuck duffy} all my customers send via pdf in email now

{Megan F.} If you wish we change you fax format to EFX from PDF. I do understand that you are not using the service much. I suggest you to use the service for another 2 months as you will not be charged any monthly fee for this period.

{Megan F.} As a goodwill gesture for our further association, I would also provide you with an additional gift usage balance of $10.00 with which you can send up to 100 pages of faxes for free (per page per minute within US & Canada).

{chuck duffy} Honestly, it's not the format, and you run a great service, but I just don't have a need for it.

Thanks but I would like to cancel now...

{Megan F.} Okay. I will cancel your account immediately.

{Megan F.} I'm sorry that you are leaving eFax. At eFax, we are continuously improving our products and services. Please do consider us if your faxing needs should change in the future.
{chuck duffy} Thanks

{Megan F.} Is there anything else, I can assist you with?

{Megan F.} It was my pleasure assisting you.

{Megan F.} Thank you for contacting j2 Global Online Support, I hope you found our session helpful.

Good-bye and take care!

{chuck duffy} I definitely will, and thank you!You can get it to go out of tune by soaking the tuners in vodka for 40
years.

Oh I see how it is.....

This might answer your question.

http://www.uaudio.com/webzine/2006/december/index5.html

Don't know if the older chassis' behave the same as the newer ones or not.
Also not sure what xp64 might bring to the mix in the way of compatibility.

ADK Pro Audio
(859) 635-5762
www.adkproaudio.com
chrisl@adkproaudio.complease don't go. we love you man !I'd try any 'fancy' vocal mics you might use on any other vocalist, but I'd
also give a very serious listen to both a 57 and a 58. Sometimes cheap, flat,
and familiar sounds good on a punk rock vocal.

>I hope you guys can help me with this. I tried to install some new VST plug-ins
and I think I may have put them in the wrong folder and now paris will not
start up. I have deleted all of my plug-ins. At start up of paris it pauses
and I get this message:
"The VST path you have specified can no longer be found. You will not have
access to VST plug-ins until you specify a new path from the setting menu".
(I can not fix this until I open paris) Am I Right?

Next I click ok and it acts as if it is going to start and it pauses again
and I get this Debug message: "Assertion Failed: afilesearchWin.c:58sd->signature==Test_SIG"
Does anyone now what this means.
I am using Win.98 3 cards and 2 mecsHi Terry,

Not sure about this one. Did you remove the 'wrong folder plugins'? You
could try a system restore, if you have that installed on win98.

-Carl

- - I'd say break out some old Iggy Pop & the Stooges, Bad Brains, Sex
Pistols, etc., for some reference.

rock on,
-Carl

I removed my Vst plug-ins think that would help, then I removed my eds plug-ins
as well. Where would I look for the system restore I'm not sure I have seen
that.

> www.adkproaudio.com
> chrisl@adkproaudio.comSystem restore was made for XP, however, microsoft later released updates
for 2000, ME, 98, etc. You would have had to update your 98 OS to get it. It
would reside in your Program/Accessories/System Tools menu.

I would just try to get your EDS plugin folder, and your VST folder restored
as closely as possible, and then see what happens.

What version of Paris are you using?

So it's "Chick-Punk", huh? I'd try that C-1 if you still have
it, but run it through your 737 to warm it up & take some of
the edge off (hit it with the compressor, too)... on a female
voice that combination it might give you just the right amount
of rasp for that genre.

If I was at my DAW, I could confirm but not sure.

Good luck
Rob

Rob
www.studiomanitou.comHey DJ
Link doesn't seem to be working. I've waited about three minutes to hook
up. No luck. Would you mind describing "brown sound" a little more? I've
heard the term before relative to electric guitars. Sounds kind of
poo-like, unflattering :-)

for this, and that
I need to use word pad. So, for some reason my wordpad is not working and
my system will not acknowledge my win. 98 CD. (When it rains it pours) Any
ideal about the "Assertion Failed" problem or do you think they are tied
together.

------=_NextPart_000_0009_01C82AEB.3FAF66C0--I do some "classic" punk, sort of in the 1977-79 mode...
Can't hear the tune, but, great punk is not all screaming, Joey Ramone was
a singer emulating Ronnie Spector!..I used a lawson L47 before. My 2247 seems
a bit too thick for "Punk"
Been digging a 421 as well, sometimes using the filter
 I like the first CD of a Girl group called Sahara Hotnights...Check that
one out.

And it's not just the last one I was working on, I can't save any project
file, with or without changes. What the unh-unh?!

I'm going to go ahead and get some work done tonight, and hope that the work
isn't lost somehow.

JimmySomething is not truly ours until we scratch it...

sad but true...

I can't even go back to previous project files and start over. It just keeps giving me the same error message.

I think the whole thing started when I rendered a segments from a few different files to one file on one track. Things got glitchy when i did that last night.
I think. I've tried so many things since then...

WTF?!

>I had a new steel guitar delivered to me while working at Quad Studios in
Nashville--a beautiful blue lacquer body with nice pearl inlay. The builder
dropped it off that evening and we had it out on the studio floor with lots
of other gear etc. After we went home, cartage came by to pick up all the
gear--at least three different companies. Anyway, when we came back the
next morning, the was a big ding right under the pearl inlaid logo on the
front--clear into the wood...didn't even have it 24 hours.

At least I didn't worry so much about when it was going to happen...

Mike R. wrote:
> ARRRRRRRGGGGGGGGGGGG!!!!!!!!!!!!
>
> 1 and a half inches after contact with the sound board.....I just loaded a Powercore MK1 in my Magma chassis that is holding my 4 x
UAD-1 cards. It's a 13 slot model (the newer PT branded one with the round
cables for the host cards). these can be purchased for around $300.00 on
EBay these days.

Cards are ordered as follows:

Slot 1-UAD-1 ` IRQ 19
Slot 2-Powercore Mk1 IRQ 18
Slot 3- open
Slot 4-open
Slot 5-UAD-1 IRQ 19
Slot 6-open
Slot 7-UAD-1 IRQ 19
Slot 8-open
Slot 9-open
Slot 10-open
Slot 11-UAD-1 IRQ 19
Slot 12 open
Slot 13-open

The host card of this magma is in PCI slot 2 of my mobo (gigabyte GA-K8NS
Ultra 939)

I have decided to lose the idea of running two computers synced via
Systemlink when tracking (just a little too iffy for my taste) and have
moved one of my Multiface units to the DAW with the MADI and AES 32 card.

The MADI card is in Slot 1, the AES 32 card is in Slot 5 and the Multiface PCI is in slot 7. No other cards in this chassis, the host card is in PCI #4 of the mobo and all cards are sharing IRQ 19.

So far it's been very stable. This will give me 24 analog I/O, 24 ADAT inputs to stream audio from my slave DAW, 8 x stereo pair of AES I/O for my outboard processors and some other AES I/O options should I need them.

I need to replace the other Multiface that I had in the slave DAW with a 9652. If anyone out there has an HDSP 9652 and wants to talk about a swap for a Multiface, I'm game.

DeejYou guys should see my correspondence with the Australian Bureau Of Meteorology on the fact that they predict rain in Melbourne roughly twice as often as it actually occurs.

I did withhold from getting abusive about it for the first two weeks, because the person who I first dealt with, while I was getting nowhere, was, at least, sending me a lot of data and responding within 24 hours or so to each email, even if he wasn't addressing the points themselves, or giving any indication of admission that this might be an issue.

Once he went on holidays however, and the new person basically asked that I repeat everything so that he could presumably muck me around for the same period of time as the first guy, I did get a little annoyed.

It was at this point that I pointed out that, given that they predict twice as much rain as what actually occurs, that were I to set up a weather website which never ever predicts rain, it would, in fact, be equally accurate to them. I felt that they might then see my point at least, that improving from this dismal level of accuracy cannot be hard given that predicting nothing at all is equally accurate. That was Friday. On Monday night, having seen no response, I emailed again asking for a response. About 11am today I still had seen nothing, and emailed back explaining that I am determined to get something done about this, and would appreciate it if they save me the trouble of talking to the media and politicians in order for that to happen.

Strangely, responses quickly followed.

The first simply said that the person I was speaking to had passed the information on to his supervisor.

The second was presumably from the supervisor, and contained no text whatsoever, but just a picture of a graph which simply showed how much rain occurred, on average, with each of their prediction types. In other words, it said that for the prediction "A Few Showers / Drizzle" the average rainfall was 0.7mm. It made no statement as to whether, for example, two out of three

times when they predict "A Few Showers / Drizzle" no rain occurs, but 2.1mm occurs on the third occasion hence creating this average. It simply stated that the average is 0.7mm. In other words, it was information that was close to irrelevant to the question.

I am getting rather tired of this, and might spend my energy contacting the media if I don't feel like I'm getting somewhere as of tomorrow.

Anyhow, I responded thusly:
==========
I see you have supplied me with a graph.

From what I can tell this graph shows, over time, how much rain occurs on average given a set probability of rain.

It does not appear to show what percentage of those predictions occurred. For example, it provides no information whatsoever as to whether the rain on the graph underneath for the prediction "Drizzle/Shower or two" occurred in one hit.

To give you an example, this graph could mean that of all 352 cases shown where you predicted "Drizzle/Shower or two" that it only rained once, but on that one occasion it rained around 200mm hence bringing the average rainfall for all 352 cases to the total shown of around
0.7mm or so.

I assume that didn't happen. It is however quite likely that in your 352 cases of "Drizzle/Shower or two" it rained about 2mm in one third of the cases, but did not rain at all in the other two thirds of the cases. This would also give an average of
0.7mm of rain on those days.

That said, I can't see this graph's relevance to the point I am making. Do you properly understand the point I am trying to make and the reason for my concern? Because you appear to have sent me a graph which, while interesting, really doesn't in any way answer my query.

Cheers,
Kim.

------=_NextPart_000_000E_01C82B37.11A571B0--You can open "Paris.cfg" in any kind of texteditors like Wordpad,
Words etc. Just remember after deleting the VSTpath, save it as a
textfile and be sure to manually change the txt ending to cfg.
When starting Paris again, it will not search for any VSTpath, as far
as I remember.

> I choose Polesoft Lockspam to fight spam, and you?
> http://www.polesoft.com/refer.htmlYea Terry, like Erling said, just change the cfg to txt, then open in

notepad, edit, save, then change back to cfg. I would make a backup of the original cfg before you edit just in case things go haywire.

Thanks
Rob

---=_linux4748905c--Hehehe...But really, Glen Matlock was the real bass player for The Pistols, Sid replaced him late for live...Image thing I guess.. Steve Jones reprtedly playted all the bass part on Bollocks...

But really there are some amazing punk rock musicans..
Listen to Television Or The Jam's "All Mod Cons" or try out Billy Zoom from X on More Fun In The new World.

Dylan says he wanted Mick Jones of The Clash as his guitarist in the 80's as he was so inventive and passionate Listen to Topper headons drumming on anything..YES!

I grew up in eastern Montana and living in Portland I really miss the =
snow. We don't have winter here, we have Spring, Summer, Autumn, and =
Wetter.

I love snow cuz it's made out of these things:

Sarah :)

http://www.fairlightcmi.com/NED-systems-home.htmlhttp://www.mediafire.com/?9jdfzmttmr0

From another project I started mixing tonight. I love working with stuff
like this.

Maybe I should reamp the aoud with a Marshall and flatline it ?

;o)And dye their hair purple.
Sounds great!
I was sent a piece of Classical guitar by a friend (not that he played),
I have a feeling you'd love it DJ.
Let me know if you'd like me to send it to you.

>HI Rich,
Extremely Hot, Extremely noisy.
You might want to just pull out the second processor if you want to run
with Paris. Also you will need to disable Hyper threading in the BIOS.
These Xeon models will be about as fast as a AMD X4800 or an Intel Core
2 Duo 6400.
Do you know what motherboard brand is used on this IBM board? That can
matter allot if it's going to work.
Personally I would sell to somebody running a Linux mail server or
something. :)

I've got this cool program that puts panoramas together from two or more photos. The photo I posted was a composite of two.

I always looking at landscapes as potential paintings...

Funny you should post this right now, DJ.

Believe it or not, I was thinking about something like this just yesterday.

Other than the obvious butt-of-jokes qualities about accordions, the real problem with them is that it's really really hard to play them quietly. When you (or I, as the case may be) try, I lose much of the feeling, control and subtlety. (As if there was any to lose. I know. I know.)

But it ocurred to me that a digital recreation could actually turn the volume down and still have the same expression. Or so it seemed to me yesterday, when I was thinking this idea I had. It was my idea. And it was mine.

I saw something about the Roland accordion/synth thing some time ago. I think they reviewed it in Keyboard mag. It was ungodly heavy and ridiculously expensive, and not very expressive, as it turned out. Too organ like, I think.

For now I'll stick to my little ancient noisemaker.

------=_NextPart_000_011A_01C82F13.08E7C430--Don, maybe it's time to have a look at this free product for
homeusers:

http://www.download.com/Avast-Home-Edition/3000-2239_4-10747 101.html?tag=lst-1

It was a musician friend of mine that said it was the only
antivirusprogram that didn't interfere with any of his programs some
years ago. He is also a good programmer and knows really well what
he's talking about. Some years ago he was involved in great problems
with Symantec Antivirus products and his Nuendo software, so he
tested different antivirus products and ended up with Avast. Me too
and most of my family have now used it for years with it's problemfree
behavings with our programs.

>oh, i thought you had stopped buying crap :-)wow, that really sounds great. lots of character on the sounds. what a breath
of fresh air !Chris, not sure what the motherboard brand is. I haven't taken that careful
a look at it yet. The thing is a beast with 6 fans, 2 power supplies and it
weighs a ton. The dimensions of the case make it difficult to customize with
SATA hot swap drive trays. It was designed specifically for RAID, using IBM
SCSI hot swap Ultra320 drives or U160 drives, hard to find and kind of
obsolete. I think I'm going to get rid of the thing. You know anyone who
wants to run a Linux mail server? :-)

Thanks,
Rich

>Hi Chris,

I've been running paris on a dual core machine for months without a single hickup by setting the intaffinity flag in the boot.ini and using an application cpu affinity utility. I can repost instructions if anyone is interested.
 There is no need to disable hyperthreading or remove a cpu to run PARIS anymore.

All the best,

Mike

if you've been playing in some smokey dive, you honestly don't want to smell
what comes out, no matter what FZ said...A good drummer friend of mine is going electronic. He's bought a MIDI trigger
kit already, and is now looking through options for software on the PC. What
are the current faves? His original stuff is rock-esque, in the "Alternative
/ Pop" kinda range, but the sounds might get general cover band use also.

Anybody have any new comments about...

(*) BFD
(*) Battery
(*) Easy Drummer - Adictive Drums
(*) Others?

Also, any issues that anybody has had with any of these, especially with
Cubase as a host.

....oh, and any advice on stand alone host apps, given that in a live sense
he probably doesn't need to run a whole DAW if he doesn't need to. I know
BFD will load stand alone...

Thanks in advance! :o)

Cheers,
Kim."DJ" <animix _ at _ animas _ dot _ net> wrote:

look... pictures!

http://fresnel.wordpress.com/2007/11/23/do-do-doooo-lookin-o ut-my-back-door/Help!

My housemate and owner of the PARIS studio just got himself Pro Tools
M-Powered w/ an M-Audio Firewire 1814 to put together his demos in his
little upstairs workstation/studio. He really likes it (because he can make
it work), which is fine, except now he's talking about putting the same kind
of system in the main studio downstairs where PARIS has been my good buddy
for almost ten years.

This is crazy, right? I mean, are these things even in the same league?
I don't know, but PARIS been berry, berry good to me.

Maybe we can just get another patchbay and run them both?

Rrrrrr . . .

SCheck out DFH2 - sounds good, no issues running it with Cubase,
and now comes wiht a stand-alone host, IIRC reading recently.
Nothing amazing or extravagant about it, but just a handful of
some good basic rock-type sounds overall.

>BFD will load stand alone...
>
>Thanks in advance! :o)
>
>Cheers,
>Kim.Why not run them both in that space if you can? If I were you,
I'd lobby for leaving the Paris PC the hell alone, setting up
another PC for PTLE, and getting: 1.) a switchout box to be
able to toggle between one PC & the other for the same
keyboard/mouse/monitor set. and 2.) another switchbox to enable
you to use the same monitor speakers for either rig. Let's face
it, a PC tower takes up about one square foot of floor space -
certainly these two systems can co-exist in the same space.

Neil

It's huge to me! I have a P4 3.0 that has been waiting for this fix.
T.

Ah, then first one was a quick snap as the wind was blowing 30
MPH in my face - the second one wasn't all that bad though. Not
as nice as yours, that's for sure.

>I always looking at landscapes as potential paintings...

When I was into photography years ago, I used to LOVE shooting
landscapes... it was my favorite thing to take photos of - I
think I was inspired by the shots of Ansel Adams to a degree.

NeilHi,
Can anyone help me with this?
I try to open Paris and during the loading I get a message that says "registry
error make sure product is installed properly"

Then I get an unhandles exception: c0000005
At address:1496dd3a box that comes up and it tells me it has to close do
I want to send a report to microsoft. Paris then shuts down and sometimes
the computer shuts down to and restarts.
I have reloaded Paris with no luck, any suggsetions as to what this might
be?
Thanks,
CarolI agree with Neil....!

Today at a gallery I saw an infrared black and white of Yosemite that looked an awful lot like an Ansel Adams. Had the same ethereal quality.

I wish I'd stopped in to see him when he hung out in Yosemite.

On the other hand, you should see some of the shots I've been taking in the hills around here lately.

-steveMe too. DO NOT let him jack around with a stable Paris DAW. Leave it completely alone and just get a separate computer and, if necessary, a KVM switch so you can share the keyboard, monitor and mouse with both computers.. You'll likely need one anyway if it's PTLE since that's a native system. Also, if you have a MEC with an ADAT card, you can sync the PT system to your Paris rig and use them both.

;o)

Seriously though.... PT LE is not going to achieve the latency settings nor the mixbus mojo that Paris has. If you track with any FX, that matters a lot. If he's cool with tossing that, offer to buy the whole Paris rig as is at market value and gloat. Better yet, export out the tracks as WAV from a song from your last CD, and have him mix it in LE. Compare to Paris mix not only sound but workflow. The gleam of the new LE will wear off pretty quick at this point I bet. Also have him price LE plugs against the donation ware and time proven plugs for Paris DSP.

Well, it's a very small control closet . . . uh, room, but I think he'll
listen to reason and keep the working PARIS system, especially if I share
all your professional opinions. Besides, I'm his arranger/co-producer, and
I'm working cheeep, so he has to keep me happy.

It has to be a separate computer, though, right? I mean, you couldn't put
PARIS and PT in the same computer with XP, cuz they'd fight, right?

I'm such a techie, eh? You can see why the thought of learning a new system
give me a panic attack. :)

Thank you, guys, you're all awesome

>I'm with Aaron, and everyone else, but especially Aaron for suggesting that
you buy it.

Indeed, you may just find that if you offer to buy it so that you can use
it plugged in alongside his Protools then suddenly he might change his mind.
I don't think we need to prove to you that people are easily swayed by public
opinion, yet people tend also to follow leaders. If you show you are happy
to do your own thing, well...

But I do doubt that you could get something like what I heard on Wayward
soming out of Protools without a lot more effort. Personally I'm a Paris
fan not so much because it's "better" but because it's "me". It has advantages
and disadvantages, but I know what kinda of sound digital systems lead towards,
and IMHO your stuff belongs on Paris... or "real" analog.

What's the world coming to when I'm putting "real" in quotes when actually
talking about something real. Oh gosh.

Anyhow, best of luck.

PS. I could use a spare EDS card if he's selling. ;o)

Cheers,
Kim.

Corrupted Default Project 'unhandled exception: c0000005 at address:
00481382'

'Paris has caused an error in Paris.exe'

1. Delete or move the offending default project file out of the Paris
directory.
2. De install Paris.
3. Go to the windows system folder and
a. delete the directory that says Ensoniq if present
b. delete the file Paris_StudioControlLibrary.dll if present
c. Reinstall Paris
4. Start with one card.
5. If necessary, go to plain vanilla system, meaning ALL cards removed
except
for video and 1-EDS. Once that is working, start adding others one at
a
time until all is working.

I am not suspecting your card swapping for the moment because it
sounds like
the hardware initialized, but then could not open the
default_project.ppj.

This makes me think it was a corrupted ppj file, or other corrupted
Paris
components. Hence the above advice.

Some things to make note of:
1. Did Paris work initially with your new advancesys scsi card or did
it
stop working immediately after you installed the new card?

2. If you remove the advancesys and put everything else back where it
was
before, does it all work fine? (you may need to force a PnP update via
your
bios)

>Thanks,
>CarolProtools will eat paris for breakfastI was getting this warning on a regular basis after
switching between
different projects and almost always when trying to open a new project

I then uninstalled and reinstalled Paris and all it's goodies as per
Dimitrios' recomendations. in the C root directory I believe

After that I got this warning less frequently but usually after working on
three different projects andtrying to open a fourth.

I mentioned this problem to the guy who's built and upgraded my paris rig
from day one and he seemend to think it had something to do with Paris or
the computer not fully clearing out the memory of the preceeding project so
just for the hell of it I tried something very simple...when the time came
to change to a fourth project I would close the third and wait at least 15
seconds before opening the fourth...guess what, no more warnings/crashes

Don't know if this will work for you but it has made playing with Paris a
lot more enjoyable

I'd say that you'd be taking a chance on destablizing the whole rig if you
move any of the EDS cards around on the motherboard to make room for another
audio interface (which you will need since the Digi can't use the EDS card).
Working paris rigs are best left alone.Also...tell him he's going to need to buy a Neve Portico 5042 to get
anywhere in the ballpark as far as the Paris mix bus mojo is concerned so to
get ready to pony up another $1400.00+ if he wants "that sound".

The big problem with this could be IRQ. Unless there is a free slot with a

free IRQ for the interface that will be needed for ProTools, then you will
need to start moving EDS cards around. If it's a multicard system, this is
where theings can come unglued.There will be more to it than that. Hardware is going to change if they add
a FW card, and probably how the IRQ ranges are allocated.

crash nnneearly as much if at all. I suspect your friend is on the right
path though I'm not sure if it's the multi threaded part of the app or the
XP hardware drivers that cause it and I may never know.. which is ok, all I
need is to know how to avoid the crashes :)

I'll pick you up at the airport and drive! GC is only a 20 minute jaunt
and there is a sales guy there that I'd love to subject to your routine!

;-)

After living out of hotels etc. for two months we've finally started the process on a place in the boondocks. I figure I'll replace my upright with a digital piano because it has a better chance of staying in tune.
  Looking for ones with decent action and built in speakers (wifey doesn't want wires all over the place). I know there was a thread with some suggestions a while back but didn't find it.

Any good ones in the price range?

JHThat is exactly what it has to do with.

The big advantage, as a player, is that you're not dependent on pumping the bellows constantly, but only for emphasis or expression.

Amazing how they put that much time and money into something and still manage to have half the sounds suck.

The other half are quite good, though.

-steve

I apologize for actually taking this stuff seriously....

>Hi,
Thanks for your suggestions. I've tried these things but I keep getting a
"registry error, make sure application is installed properly" box. This is
while it's loading during the loading of the EDS/Direct loading segment it
goes through. Could it be because of some other program I installed in the
last week?
Like Stylus RMX, Trilogy or Cubase SE? I also tried a demo of Massive and
Tera. Any of these tend to cause a problem?
Thanks,
Carol

No more so than a key player running gigasampler etc etc.

So no, I wouldn't think so. I believe that pretty much have that under control
down to sub 10ms kinda times.

Fundamentally any digital device triggering samples is a computer, so obviously
if it's done right, you get low delay times.

Cheers,
Kim.Carol.
If your Paris VST folder shares with the Cubase VST folder, and
you have virtual instruments installed, almost certainly these
will play havoc with Paris. Try temporarily moving all the
vsti DLL's out of the VST folder and then try launching PARIS.
Also you could temporarily change the entry in the Paris.cfg file, (found
in the directory where Paris is installed), from
"DisableDirectX=0" to "DisableDirectX=1".

Kim

>contact me via email at dnafe at rogers dot comHi Kim,

Here is some info on the new BFD just in :)

We really love BFD , its the central piece in the
Song Writers Workshops we do here in the store.
BFD peaks the Way Cool meter - Bigtime !

And Yes Of course there will be a PARIS Group buy
on BFD and upgrades

The much anticipated BFD2 is now en route from the UK to the US.
Stock will be available to ship to US dealers from 03 DEC 2007.

For details on the new features, please see the following links:

http://www.fxpansion.com/index.php?page=53

http://www.fxpansion.com/index.php?page=53&tab=148

http://www.fxpansion.com/index.php?page=53&tab=149

http://www.fxpansion.com/index.php?page=53&tab=150

http://www.fxpansion.com/index.php?page=53&tab=151

This has been one of the most anticipated updates this year and I
expect demand to exceed supply.

Morgan :)

I tried your suggestion but no luck. I moved all the VSt's out. I still get
the "registry error make sure program is installed properly"
I alsoremoved the scherzo files from the system 32 file
then reinstalled the drivers then reinstalled the drivers,then reinstalled
Paris and still get that error. What could be going on?

>Ahh, just realised that you are having the c00000005 (or whatever
it is..) problem.
It's a sticky one, but I had this sometime ago.
In my case changing RAM and flashing the Bios on the mobo fixed
it.
If you have some spare RAM, try it. If not, and you have at least
two modules, try pulling one out and swapping.
What mobo/hardware configuration are you running?
Have you installed V3 with all the fx subsystem fixes correctly?
Search the NG for a thread entitled "XP tweaks for Paris share findings"

and you may find some clues there.

How can this possibly occur..? It's SOFTWARE!!!!

So what... are you saying they'll not be able to replicate the
disks fast enough? Or perhaps the world will run out of a key
pigment needed to print one of the colors in the packaging?

lolHI Mike,
Yep know about the boot.ini setting but it basically negates a reason to
even have a dual core at all.
Most all of Paris issues with multi- cpu setups comes from the hard ware
driver level.
Have you tried the method of setting affinity for individual hardware
devices? Some of the newer Intel core2 duo based motherboards actually

let you switch the cpu to to a single core mode in the bios with out
having to mess with the boot.ini end of things.
As long as you install widows with the dual core enabled you can then
switch back and forth with out any adverse effects.

Chris

(859) 635-5762ok.... so I am working on a final mix for a guy and the place he tracked it at gave us the PT file.. not OMF... so i cant import it direct into Paris....

is there ANYTHING that will open it short of another PT rig?Kim,
I've got a P4 3.00 GHZ ACPI Multiprocessor PC 1.99 GB RAM, SP2
Just not sure why all of a sudden I'm getting these mesages when it used to work a few weeks ago.
I don't know how the FLASH the Bios, (is it easy enough to try?) and I'm only running 1 card.
I will check out the tweaks and try them.
Thanks,
Carol

>Hi Kim, I have almost all of them.. But , go to Vsti Drums are

1) XLN Addictive Drums.. Killer (easy) Interface with great sounding kits.

2)Native Instruments Battery 3. Killer Drum app
That can contiunes to grow with your library. The Lib that comes with Battery
is killer in it's own right.

3) Stylus(Orginal) & Stylus RMX.. Again, for the R&B/Dance Techno, Hip Hop..Stylus
is a must..

4) Ez Drummer(Nashville,Latin, Claustrophobic,Vintage Rock). These babys
cover a lot of ground. Sound s great and very EZ interface.
.....These are my Go to babys.
I trigger via Roland V-Drum or Akai MPC 2000

*My take on the others. BDF-Deluxe..Nice, But drums are 'RAW'..If you don;t
knwo how to treat real live recorded drums , then leave BFD alone..However,
if you want to Learn how to get a RAW recorded kit to sound good, then BFD
is your choice..

*DKFH-Custome Vintage..NIce, Intuitive Interface. Nice sounding Kits..Plays
good with Electric drum kits.

*Larry Sayer Drums for Giga Sampler..Killer Kits..Very expressive.

>Kim.Hi Scott.. You'll have to either get a Cheap M-Powered version of Pro Tools
32 track playback, 128 track edit count.. OR have studio render(bounce) those
tracks down..

You'll be surprise bt how good Pro Tools sound and is really nice for mixing..

>is there ANYTHING that will open it short of another PT rig?Guys, I just read (Sound on Sound
DEC 07) that those of us who track @ 44.1
& 48k are actually using "More" CPU cycles than those who track & Mix at
88.2/96/192..WOW!!

Meaning (If I'm getting this right) The computer works Harder to track and
mix sessions at those low rates (44.1/48k)..

If this is correcxt, then starting fresh in 08(after this last mixing session)
, all of my session will be @ 88.2.

Since hard driver are going for very little theses days (500 gig seagate
ATA 3.0 $99.00 bucks everywhere, this makes going to the higher rates a must..

Please (all) chime in..DJ, Neil, Thad, John,Chris, Bill, Kim, Don, Sarah,
Chuck, Doug W etc..Sorry

Not suggesting you flash the bios is it was working.
In my case, it was a box I put together for Paris, and
It was flakey to start with until I did the bios update.
However, Ram could still be an issue.

I also wondered. ;o)

I guess he's either saying that he doesn't think they will do enough in the
first run. Or perhaps he placed the order a few months back before seeing
the feature set and is now going "Mmm... 20 won't go far". ;o)

Cheers,
Kim.The only logical support I can see for this idea would be something to do
with data flow and bus size depending on the app (but it's a stretch). Kinda
like 64 bit computers are more or less just wasting the extra 32 bits much
of the time.

I can't see immediately how this would work out though. One potential is

that perhaps at 88.2 they ship two 24 bit packets in one hit, making a single 48 bit packet, precisely 3 x 16. Make it stereo and you're 6 x 16 or 3 x 32 which fits neatly down the bus. Of course you could do the same with 44.1 but you'd need to pack the data appropriately. Perhaps some apps don't.

Even on the wild stretch that I'm correct in this theory or something similar, I can't see how you'd end up using LESS. You would use less than double, sure, but not less overall.

They may be right, but I'm not a believer yet.

Cheers,
Kim.

I decided to mix in paris because the project could use some of the "special sauce"... I got my rig out of moth balls and got it on a new clean machine for this one... otherwise... would have mixed it in sequioa.

ya never know... I might start doing more with paris again... I got away from it because I have been doing mostly broadcast material.

>hey everybody. i moved to portland, oregon a few months ago and am looking
for some studio work. i can play a lot of instruments and sing, but am
mainly looking for work as a drummer because i can hang with just about
anybody on the drums. if you know anybody out here who may be in need
please send them my way.

davidevanmusic@yahoo.com

you can hear some samples of my drumming at these two sites, though i do
have a wider range. i can play in many styles and time signatures and have
a large dynamic range.

Perhaps so, but we're talking about overall system resource use at 88.2 as
well. You certainly don't get additional capabilities to run plugins, for
instance, and when using dedicated DSP cards like the UAD-1, system
resources are half what's available at 44.1. I'm going to have to get this
issue and read the article. SOS is usually pretty on top of things when it
comes to accuracy in their articles. This sounds to me like a big FU as far
as taking the overall big picture into account.Well yes you're dead right. Even in the scenario I described we're talking
about a "less than double" scenario, not a "less than status quo" situation.
Like you say, hardware based stuff will pretty much always use precisely
double the resources. Indeed I recall some sketch ideas one of the experts
(chuck maybe?) put forward about the highly unlikely possibility of running
a Paris system at 88.2 and that, with EDS at least, you could probably program
it to simply process double the stuff, but you'd end up with half the tracks...
ignoring fundamentals like changing the converters etc.

And effects calculations for double the frequency are not like, say, increasing
from 24 bit to 48 bit audio. With 88.2 you literally simply have twice as
many numbers rather than numbers twice as big. Sometimes numbers twice as
big can be pushed through more efficiently, especially if you're on 64 bit
hardware, but if you've got twice as many numbers it pretty much just takes
twice as many cycles.

It's fairly much identical in every respect to trying to play a 44.1 project
twice as quickly on your DAW. It seems pretty clear that it will just take
twice as much grunt.

I'll be interested to hear more details. It does seem that either there is
a FU of some sort, or that there is some missing info here. It wouldn't surprise
me if there are hidden efficiencies somewhere, but I'd be amazingly surprised
if you used less grunt overall. Bamboozled in fact. ;o)

Cheers,
Kim.

>Having said all that...

I do believe noting somewhere that they included a function with 64 bit processors whereby they can actually act as two 32 bit processors working in parallel. I think it required that the exact same operation was being performed in each half, but this would appear to apply in audio. If you were able to use that particular feature of the processor within a 64 bit OS (which I'm not sure about) you just MIGHT almost break even... ignoring UAD scenarios etc, but on the host only side, you should theoretically come close. The host app would obviously need to be written specifically to do this on 64 bit hardware, but it may be a possibility.

You still wouldn't use less of course, but you might only use, say, 5-10% more grunt than otherwise given that memory bandwidth is also 64 bit. Your only real bottleneck would be HDD access and, well, any other parts of the DAW software which couldn't use this feature but still had to deal with the extra data. I could envisage this might be minimal though.

So I could see that maybe, on 64 bit hardware with specifically written host

software to suit, you may come close to the same performance as 44.1...

....maybe...

....did I say maybe?

Best I can come up with. Anybody else?

Cheers,
Kim.

I don't know DJ, I've been seeing more and more opinionated comments and
using forums as resource material in SOS reviews.

The cpu use/sample rate issue is of course easy to test and if SOS didn't
even bother, then they are really getting sloppy.

DedricLamont, I'm with you - I want speedy setup when I use a drum VSTi.
Ideally one of these kits would have options for raw, a set of various
complete kit EQs and also tweakable individual drum EQs. Do any of them
do that?

>Based on my experience (not measurements of any kind, other
than looking at the CPU meter), this is not the case. I work
primarily in 88.2k, but have done perhaps 3 or 4 44.1k
projects in SX, and it definitely takes more CPU horsepower to
run the higher samplerates. Streaming the files is nothing for
the audio drives anymore, especially if you're using SATA...
I can stream around 40 tracks at 88.2k & the drive meter in SX
barely registers - that's with a Western Digiblah 7,200rpm with
the 8meg buffer - but the CPU absolutely takes a hit when
you're using the higher samplerates. You can see it on the
meter, AND you can feel it in the performance of the machine.

Do you have the PT files on disc or where you can upload to an FTP server
(I have one ready)

if so I might be able to get then converted to wav for nothing by a friend

I'll check on my end

taxing on the drive itself to stream,
so you will end up with half the potential track count per drive.

David.

Damn dude!!!....you had me gettin' apoplectic there for a little while.

;oDi agree, there's definitely a hit on all aspects.

chrisl@adkproaudio.comHi Lamont
  I think you gonna need to clean out the bong AND get new glasses. :)
That said it sounds like some that would be passed around on the
Gearsluts forum. Hey did you know that audio sounds different playing
from a firewire than it does from a internal drive !!! NO really I can

hear the difference. But thats because of the pure silver oxygen free
firewire cables and SATA cables. :)

Chris

The thing about firewire is is noisy because you can hear the packets
hitting the wall after they pop through the bus.I just ordered them from you! Thanks !!!!!

JohnINTEGER! 64 bit INTEGER PROCESSORS!!!!!! PLEASE FOR THE LOVE OF GOD DON'T MAKE ME GO OVER THIS AGAIN. FPU PROCESSING IS ALREADY 128 BIT WIDE ON MODERN
PROCESSORS, AND ALMOST ALWAYS PARALLEL. SO THE FPU (IF THE ALGORITHM IS PROPERLY
CODED) COULD DO TWO 64 BIT WORDS, FOUR 32 BIT WORDS, EIGHT 16 BIT WORDS, ETC. AS LONG AS IT'S THE SAME PROCESS.

INTEGER! INTEGER! INTEGER!

Sorry,

TCB

>Why do I do I even put up with you fucking idiots? The command queuing on SCSI controllers is the only way to get even close to a pro sound. But only on U160 controllers because the disk saturates better than on the U320 ones. Trust me, the only thing that sounds anywhere near as warm and punchy as SCSU U160 is SAS fibre channel and it's even more expensive.

It's all in the command queuing, but you're all to deaf to fucking hear it.

TCB

P.S. Don't forget to make a small partition on the outer edge of the drive for your time code, and cut a small slice between it and the main data partition so the SMPTE doesn't bleed into the rest of your tracks. Now I've given away all of my secrets, and for what? You morons are all going to keep using SATA anyway . . .

>Are any of you guys using internal SATA mobile enclosures? What do you think of this 4 drive in a 3Bay SATA HDD Mobile Rack, anyone have experience with these? Is this going to be effectively cool 4 drives? Any thoughts appreciated.

Thanks,
Rich

http://cgi.ebay.com/4HDD-to-3Bay-SATA-HDD-Mobile-Rack-for-Rack-Mount-Case_W0QQitemZ170172021398QQihZ007QQcategoryZ71517QQssPageNameZWDVWQQrdZ1QQcmdZViewItemSo, I have a live gig coming up where I might need more than the 16 in
my main mobile MEC.

I also only have one EDS card in the mobile rig at the moment.

My options are to pull the EDS from my studio rig and cable it up to the mobile EDS, and put the 442 in the rack above the MEC. That would give me another 4 tracks, plus 2 if I also use the IF-2.

Or, is that asking for a headache? I've got a spare MEC, but it won't fit in the SKB box I have at the moment, so it would have to sit on top. But that would also give me another 4 (or 6 with the IF-2).

Will the EDS+MEC/EDS+442 combo play nice, or is the 442 really an antisocial bastard who only likes to play by itself?

As soon as we make a little money on these things, I'm picking up a second EDS and a pair of 8-in cards for the second MEC.

Of course, that will also require a second EDS and second MEC for the rig at home....

Ahhhh. Gear fever is starting to settle in....

Thanks.

pabI've been running an MEC and a 442 for, umm, a good couple of years at least with no trouble...

....well, there's been trouble, but not related to those two pieces of hardware.

A 442 is basically just a cut down MEC. I don't think a Paris system really cares that it's not a full one. You'll need to patch the word clock out from

whichever interface is on the master EDS into the second interface, but other than that it should be sweet!

Cheers,
Kim.

Paul,
During all my problems with my system the 442 was the=20
only hardware that kept working. No power needed either.
You'll want a healthy power supply in your comp to help it out.
Tom

"Kim" <hiddensounds@hotmail.com> wrote in message =
news:474cc32a$1@linux...

I've been running an MEC and a 442 for, umm, a good couple of years at =
least
with no trouble...

...well, there's been trouble, but not related to those two pieces of =
hardware.

A 442 is basically just a cut down MEC. I don't think a Paris system =
really
cares that it's not a full one. You'll need to patch the word clock =
out from
whichever interface is on the master EDS into the second interface, =
but other
than that it should be sweet!

Cheers,
Kim.

------=_NextPart_000_0037_01C83139.775D4FC0--Does it matter if these are plugged in to the

line somewhere between the
source and the preamp or is it best if they interface directly with the
female input of the pre?

thanks,

DeejShort cable length on the output of an attenuator is always good.

DC

You may have a point. I'm still running sp1 with an athlon 64
in uniprocessor mode.
It is bulletproof until I start adding LOTS of plugins, comprising
DX and VST. Then it gets a little flakey. I save often.
Carol's box was working fine until a few weeks ago.
Carol, Have you turned off hyperthreading in the bios?
What motherboard is it?, and what other cards are in your system?

I've been talking to a very experienced/long track record mastering engineer
quite a bit lately and his take is to stay away from the Adams. I've never
even heard them myself, but he says that now that they have become so
popular, he 's getting a lot of mixes in here that were referenced on Adams
and the mixes he's getting in there that were done on Adam monitors have had
consistent issues that have required some pretty major corrections.

I'll see if I can get an elaboration on his findings.

Welcome to sunny Portland.

I suggest that you place an ad in Willamette Week and the Portland Mercury
(both free) re: the work you're seeking. It's a good way to get started.

You can see my band this Friday evening at Fryar Tuck's Cider Mill at Capitol
Highway and Vermont in the Multnomah Village area of Portland. We play from
9:30 to 12:30.

Best of luck!

Mark

>Hi,
I've tried a few other things and no luck. I just don't understand the "registry
error" I'm getting on Paris startup during the EDS/Direct FX loading part.
Could a RAM problem cause this error? Kim how do I shut off the hyperthreading
in the Bios, I'm willing to try it. No other extra cards installed. The mother
board is a BTX Intel Desktop Board D915GMH
800/533 MHz FSB PCI Express X16 Graphic Connector, Dual Channel DDR 400/333
MHz Memory Support

One more question if I can't get this to work I may try to find an old computer
somewhere with 98 on it or XP SP1 and reinstall. If I do that I will need
a new challenge and response code. Is INTDevices still taking those requests?
Thanks,
Carol

Download this:

 http://download.intel.com/support/motherboards/desktop/sb/bi osglossarybymenu_v07.pdf

If you've never screwed around with bios settings, just be a bit
careful. Disable hyperthreading, and "core multiplexing technology".
Then "exit and save changes".
Not sure if this will fix the problem, but for Paris these should be off
anyway.

See how you go.

Kim

A Nuendo 4 Mac user recently posted some test results on OSX vs. XP on =
the same MacPro (2.66Ghz, 3G Ram):

On the Mac he put Nuendo multiband comps (heavy cpu usage) and EQs on =
all channels for up to 32 channels and
the cpu was at 90% with stutters and slow GUI response at 1024 sample =
buffers. (N4 is now 64-bit for OSX).

On the WinXP partition, same project ran 85% at 1024 with no glitches =
and smooth response. He dropped latency to
512 samples and cpu went to 90% but still smooth response and playback.

Not trying to start a Mac vs. PC thing at all - purely a real world =
technical comparison. I've always been interested in a head to head of =
operating systems. Also take it for what its' worth until more tests =
come in.

At the moment, from all of the tests I've seen, it looks like XP can =
handle the highest load/cpu utilization of Vista, XP and OSX.
No way of knowing where Linux would compare.

Just an interesting fyi. It's not a huge difference, but even at 5-6% =
increase it's more than the difference between XP and Vista.
For some users it may be worth noting - esp. GUI responsiveness - for =
others, not a big deal.

I was actually hoping there would be no difference, but I figured OSX =
and Vista would be closer in performance due to the extra
graphics overhead and integrated tools/apps. =20

Regards,
Dedric

------=_NextPart_000_00B0_01C831D9.2514E610--It's a micro/mach kernel vs. monolithic kernel issue. It's never going to
change. In theory you get a stability bump, and there are some systems with staggering stability records. The effin FILE SYSTEM can be restarted without a reboot with a true microkernel. But you pay a penalty with low latency applications and some file system issues.

My guess is GNU/Linux could do a little better than XP if the software were really done right. But probably less than the penalty paid with a microkernel. A couple of percent, tops.

Vista is the worst of both worlds! Monolithic kernel panics with so much DRM and poorly implemented security that you get the instability of a monolithic kernel with the performance hit of micro/mach! Leave it to Redmond to manage that.

It's XP for audio and Debian for everything else in my world.

TCB

>Thanks Kim, diabled it but still no luck, thanks for the Bios info.
Another question. I have a Mac G5, Os X, can I install the EDS 1000 card
in that and use the Mac software and drivers? Can't find anything about there
being a different version card for the Mac but maybe there is. And if it
is possile Will my ppj files done on a PC open in the Mac?
Thanks,
Carol

For many attenuators and transformers there is an advantage
to keeping the secondary short, but since I have no idea what
is actually in that little barrel, I can't say anything about it.

Looks interesting. Tell us how you like it.

I'm wondering why padding at the pre isn't always the way to go
unless you want the pre's gutsier sound wide open?

I read the Earthworks page on it, and they did not say it was an attenuator. If it is, then the above is true. I would like to know what it actually is. BTW, they did say you could use it with condensors, so it must pass phantom.

hmmm

DC http://www.shure.com/ProAudio/Products/Accessories/us_pro_A1 5AS_content

Dave,

This is what I use. they work fine with normal phantom power. I have tried them with bot an AKG C460B and an Oktava MK012 with no problems. I'm not sure what A-B condenser powering is, but these are not recommended for that.

 which ones?
If not, how do I make it wireless capable short of an ethernet -> 802.11
box?

Thanks,

TCBCool, I like the lampy iMacs.

Google "imac airport card" - it looks like there are some possibilities.

Cheers,
  -Jamie

Got it. The changes can be made with in Cubase. Didn't find that
the last time through this. I had been going to Scope to change =
settings.
Anyway with some switching and three reboots we are back on track.
No clicks or pops and all ins/outs are working.

Thanks for making me think.
Tom

  "Tom Bruhl" <arpegio@comcast.net> wrote in message =
news:474f20bb$1@linux...
  Hi guys,
  I finally have Paris back up and running with Mecs and all.
  Now Cubase SX 2.1 doesn't like running because of clocking issues.
  I am using a Scope Pro card. Cubase will no longer start up
  without Scope running! That's backwards from what was working=20
  in the past. Now with both running it's a clickfest along with the=20
  inevitable crash as the two are fighting for the hardware resources. =20
  With Scope off Cubase gives the white screen of death at start up =
looking for clock.

  With Scope off I used to send Paris (XP) ADAT optical to and from 16 =
channels of=20
  Scope ADAT. Using Scope card settings at 'Sync/ADAT'. Now, whenever =
I set it=20
  to that it doesn't retain the settings and goes back to 'Master/SPDIF'
  whether it's plugged into Paris ADAT/SPDIF or not. I've also tried =

another
ADAT machine as the source which had been working while my Mecs were =
down.
That doesn't work either.

What am I missing here?

Thanks,
Tom

>TCBDear Tom,
Please do not forget always start first scope and then Cubase !
If you close first scope then you will have a problem and only a restart

of computer can bring things up.
So when closing, close first Cubase and then Scope.
If you wanna cahnge settings, like master/slave, 44.1-48khz, ect, FIRST cloae Cubase , make settings from within scope envirement and then open Cubase,
Regards,
Dimitrios

Yes, you'll either need to use a usb wifi adapter, or pony up the
premium $$$$ for an original Airport card.

When Apple upgraded from the Airport (802.11b) to the Airport Extreme
(802.11g) cards, they simply stopped producing the original cards.
Cold. As a result, they are now worth their weight in platinum on
ebay. I know - I tried to find one for a friend's G4 that I was
upgrading. I paid more than a new Extreme card for a used Airport
card....

The slots are not backwards-compatible. You cannot put an original
card in an Extreme slot, and you cannot put an Extreme card into an
original Airport slot. Yes, it's annoying as hell.

Is WC 50 ohm or 75 ohm cable? I don't have anything handy with two
bnc's on it, so I'll have to hit the local electronics store this
weekend.

Hey Dimitrios,
Really? I've been very lucky just leaving Scope closed once the =
settings
are correct. I had been making those changes in Scope but they weren't
staying as I left them even though I saved them to a Scope Project. =
They'd switch
right back to unwanted settings and Cubase wouldn't start right.
Of course I'm not using Scope much yet. Just for it's hardware
and softsynths so far in XTC mode.

I got things working when editing the same paramenters for Scope clock, =
sync,
sample rate inside of Cubase.

I seem to be ok again. I have a bunch of mixes that need to be finished =
before
I really implement some of your great ideas. The auto latency comp for =
Paris
is first on the list!!! Is that working for you?
Cheers,
Tom

Pro Tools M thing, I had a couple other ideas that might appease the hungry
techie in him.

One idea, what if we just upgrade the Paris computer? How risky is that?
It's so old, I don't even know what it is anymore, and that makes me a bit
nervous starting on a new CD project. If I do the "properties" thing, it
tells me that I have a "GenuineIntel x86 Family 6 Model 8 stepping 3,"
whatever the hell that means. It's pentium III or Celeron or something
right? Anyway, it's got a whopping 192 mb of RAM, and a mind-boggling 26 GB
of hard drive (two 4 gigs and one 18 gig). Would Paris be OK with a new
computer? Does it run in XP? Other potential problems . . . ?

Another idea would be to not only upgrade the computer, but also to expand
Paris using the spare system I have hibernating in my closet to give us 32
tracks. What does that involve aside from plugging in another EDS card?

I know you guys have discouraged me from doing anything to a working Paris
rig, but this thing's at least 7 years old, maybe more, and I hate for it to
have a coronary right in the middle of our new CD project.

I don't know. Just thinking out loud here. And I heard there was a guy
around here who could build us a killer Paris system. :)

I'd like to say thank you on behalf of the band and ourselves . . .

SarahtoninMike, can you provide the instructions for getting the plugs to show in Paris.
 I have copied the dll and ini files to their proper directory as in previous
fashion (c:\windows\system32\ensoniq\plugins).....but they do not show up
in the drop down menus.

Thanks, Mike.

Subject: *******Big Reverb Released*******
Date: 16 Nov 2007 09:32:01 +1000
From: "Mike Audet" <mike@...>
Newsgroups: IDEA.EMUEnsoniqPARIS

Hi All,

I'm am very proud to announce the release of the Big Reverb!

The "Big Reverb" was an unfinished algorithm that had been commented out
of the original PARIS stock effects source code. It includes 32 (!) configurable
early reflections, 8 configurable diffusion times, and 12 configurable reverb
resonance times. This reverb is one of a kind and sounds awesome!

This is not the reverb created by Matt Craig, but a completely different
algorithm.

As always, you can download it at www.ensoniq.ca.This is a multi-part message in MIME format.

Hey Paul,
Ya and match the lengths of each cable too.
Make an extra one or two just in case you get another
Mec or one goes bad.

John,

NS10's are popular because they basically equate to everyman's generic cheap
stereo setup. There is nothing HiFi about them.Mike sent me this a couple of months ago. It
helped me with one of his
earlier plugins, so I think it's worth a try:

quotation marks). Make sure you have the semi colon between the new
entry and what was there before.

Erling

And because, people like hearing the question: "So, why do you
put tissue paper over the tweeters?"

:DA new/larger hard drive for audio might not be a bad thing. Be aware that
old BIOS and motherboard limitations are likely well below the largest drive
available.. check with the motherboard manufacturer for those details. Get a
Seagate 7200RPM for the drive, and on a machine of that age it'll need the
IDE interface. If you put another EDS in there be aware that they are heat
sensitive and power hungry and you 'could' buckle that old supply and start
having problems. Make sure the supply is of adequate output, say something
like at least a 400w. I wouldn't touch the memory, it'll gain you nothing
IME on Win 98. Brian T ran his monster rig of 8 cards on a Athlon 1 Ghz with
256mb of memory. You're looking at one or maybe 2 EDS cards.
Above all before you touch ANYTHING, make a Ghosted image of the system
drive.

Actually, the way I was going to do it at one time was to have 9 x separate
Paris systems, each with an Opcode Studio64XTC to timeline sync them via
smpte. 8 x of them would be summing into #9 via ADAT and I think it would
have worked just fine if they were running Windows 95 so that the Opcode
driver would function properly.I remember at roughly v. 4 thinking to myself, 'Well, there's really not much
more they can do with this, probably my last upgrade.' But I have to say,
each time they release a new version there are things in there that I just
wouldn't have thought of but are super duper cool. The web site is slow but
I'm upgrading as soon as they let me log in.

I've never used WC before - there is an "insie" and an "outsie" on both the
MEC and the 442. Do I just connect MECout to 442in or do I connect both
ways?This is a multi-part message in MIME format.

Paul,
Just in to out one way. Many terminate at the end
of the last unit. Terminators are also 75ohm and
are inexpensive.

>Anyone? Benefits to AHCI on Windows XP?

Are there any issues when swapping audio SATA drives between machines
that use SATA IDE mode vs. AHCI?

Thanks!

GrahamThe main advantage I know of with AHCI involves RAID. If you switch modes
and don't have the right drivers for your drive controller you can have serious
problems.

Drive performance is so unimportant these days I'd leave the defaults unless
there's a reason.

http://www.mil-media.com/stt-1.html

I have been playing around with it a bit today with various tube/ solid state/transformer/transformerless settings on tube and solid state condenser mics.

It's just a matter of pushing a couple of buttons to dispel the notion that a tube circuit has "anything" at all to do with what is bandied about as "warmth". There is definitely a difference in the sonic footprint between solid state and tube. the "furriness" of tubes as opposed to a class "A" solid state circuit is very obvious with this preamp and both have their appropriate applications, but this unit displays the qualities of what a transformer does in such an obvious and dramatic way that there should be one of these set up in every audio habedashery on earth, just to put to rest the "myths" of tube vs solid state and to demonstrate what a transformer does to a signal.....I mean...it's not at all subtle.

It's been an interesting experience here. The tube circuit sounds good with tube mics on this particular unit which is a pairing I've come to avoid more often than not on a lo of contemporary studio gear and with my decidedly squeaky clean and extremely detailed SPA U87, the smoothest and "phattest" sound occurs when pairing with all solid state circuitry with the transformer switched into the signal path. It sounds very close to the Neve Portico 5042.....but like I said.....if you've ever been curious about what these various factors will impart to a circuit and you are in a locale where one of these units can be demo'ed.....just do it. It's worth a thousand "this vs that" articles.

Deej>I'd like to say thank you on behalf of the band and ourselves...

....and I hope you enjoyed the audition. :o)

It's worth noting what Aaron pointed out. Brian T ran an amazing system off a 1 gig 256 meg machine and back then we all thought a 26gig hdd was pretty impressive. ;o)

My first Paris system was Win98, 300Mhz 64Meg ram and a 6.5 gig hdd. Only one EDS card and I would occasionally run out of CPU grunt for plugins, but honestly, we used to track songs while the computer was also doing other stuff at the same time. You could lay down drums and bass while playing video, for example, and look at the machine specs. ;o) My second Paris rig was a 1.2 gig Athlon with 256 meg of ram. It only got replaced because it was faulty and I recognized that we were fast reaching a time when Paris wouldn't run on most new hardware. Ironically the Athlon probably ran short on resources just as often as the 300Mhz box, mostly because I was running Win XP on just 256 Meg. On win 98 this machine would probably never have required upgrading for my use, which at that point was a two EDS system not unlike your own.

All that said, a new hdd isn't going to hurt you. There's nothing like having 200Gig of space sitting there. If nothing else, it means you don't hesitate

to just "jot down an idea" in demo form and waste 300meg of space.

As far as just reliability goes, you can kind of look at it two ways. On one hand if a computer is old surely it will break soon. On the other hand, if it's 5 years old and is still running maybe that means "you got the good one" and it will run another 20 years. I find computers often fail after, say, 3-4 years if they are going to fail at all. Beyond that point they tend to fail because of mechanical hardware... dead motherboard battery, a fan has bearing issues, perhaps a hdd goes as they also have moving parts. There are exceptions to every rule of course, but if I have a box which is left untouched for 5 years and runs fine I tend to have more, rather than less faith in it.

This group is running on (I think) a 450MHz PIII with 128 meg which was probably built around 1999. We go offline from time to time for a bit due to internet issues, but that hardware has only failed once, and that was, as above, the CPU fan had a bearing issue. I bought a new CPU for $15 with a fan on it and she's been sweet since.

If I were you, assuming you don't find you need more power, I'd consider perhaps finding the biggest economical hdd you can fit in it and just leave it at that. If you're really really keen you might upgrade the ram, but Win98 runs nicely on over 128 with only Paris (runs ok on 64 if your install is clean like I said).

It's a different story if you think that upgrading the computer will help your "save Paris" case. Sometimes, even if there's no sense to it, and upgrade can make somebody feel like they are not out of date anymore. ;o) In terms of having a solid reliable Paris box that does everything you want however, I wouldn't be replacing the entire box unless you have reason to do so.

Cheers,
Kim.

>I got the RP5s and think they sound really nice. I'm very happy with them
and think they will totally help me make mixes that translate well.I'd still be curious to hear from Deej as to what his mastering
guy pal had to say negatively about the ADAM's & the problems
he'd enocuntered with mixes done on them.

If anything, I'd have to take a wild guess and say: "too much
high end" - the few times I've heard the ADAM stuff, the high
end was so smooth & clear, & with imaging so preceise, that I'd
be inclined to believe that it might want to make you push more
of it. IOW, it'd still translate well over the ribbons, but
over regular tweets, it might be too much.

Deej, is my wild guess right?

That fuckin' RAWKS! I want it in the Platinum finish <drool,
drool> lol. :D

>It's just a matter of pushing a couple of buttons to dispel
>the notion that a tube circuit has "anything" at all to do
>with what is bandied about as "warmth".

A few years ago, ISTR a disussion here that was actually
spurred by a Scott Dorsey response to something I posted on
r.a.p., and he was essentially stating that what most people
perceive as "tube warmth", is really "iron warmth" - not his
words, but i'm paraphrasing. IOW, transformers happen to exist
in all true (i.e.: NOT starved-plate) tube circuits, and so
when people hear tube channels/preamps/whatever, they hear

that "warm" sound - they think its the tubes, but it's not,
it's the BIG IRON!

>There is definitely a difference in the sonic footprint
>between solid state and tube. the "furriness" of tubes as
>opposed to a class "A" solid state circuit is very obvious
>with this preamp

Here's a good test - it's a simple no-brainer kinda thing, but
IMO, it displays "wooliness", or lack thereof, better than
anything else... just go up to your mic and get within six
inches or so, and sing a single note, somewhere between
an "Ahhhhh" and an "Uhhhhh" and hold that note for a few
seconds. Compare that to the same tube mic in a solid state
preamp or a non-tube mic through the previous tube preamp, etc.

"Wool" will either ensue - or not.

Warmth - however - is different... has to do with the iron in
the circuit... I tend to agree with Dorsey's observations on
this.

NeilFWIW, I tried RAID mode when setting up my current Cubase/XP
rig just to see if it gave me any benefits, & it didn't work
worth a flying fark - switched to IDE mode and everything was
jake.

I think I remember Deej and perhaps even Dedric or Chris Ludwig
saying something about trying RAID before I even had a RAID-
capable system and they didn't have any luck either. "ANYTHING
BUT"-RAID seems to work better for audio apps - at least at
this moment in time.

Neil

Neil,

The tube circuitry in this pre, really imparts a different timbre to the signal. Some perception of air in the 6.5k and up frequency range without any shelving boost or low cut. There's just some sparkle, just like you hear with a tube circuit in a mic. Sometimes pairing two tube circuits like that can just be too much and that sparkle becomes harshness/distortion. This particular pre, though maybe a bit noisier in the tube circuit than the SS circuit when driven hard, is one of the few that I have tried that I like when paired with the tube mics I've got here. Perhaps that's because these tube mics I've tried it with (SE Gemini, Peluso and Manley) all have pretty hot output stages so I'm not really needing to drive the tube circuit in the preamp that much, but there's something else too. I've got other tube pres here that don't play as nice with my tube mics so go figure. At any rate, I wouldn't mind having a few of these in my rack. The literature states that there are over 134 different circuit combinations possible by switching the different options in and out.Good stuff man.

Tubes also exhibit group delay (frequency bands moving around in time) and this is a good thing or bad thing depending on the application.

Also, transformers do not have to color things at all. The trannies that people are reproducing today are based upon ones that did, but it is not inherent in the technology.

This mic pre

http://www.johnhardyco.com/M-1details.html

is cleaner and more detailed than the Millenia IMO, and uses the Jensen JT-16-B transformer:

http://www.jensen-transformers.com/mic_in.html

I have a handbuilt version of it I use on orchestras that is so clear and transparent that I have never heard anything as good in 20 years, and yes it has input transformers. Deane Jensen's mission in life was to take the color out of transformers and make them more musical and he succeeded. I asked him once how a transformer could make something more clean and clear than without one. Seemed impossible to me. He said that the problems the tranny solved are orders of magnitude worse

than the ones that remain with a proper transformer.

But we have found musical uses for the transformers that were colored
and "inferior". So it goes.

Here is what Millennia say:

Input Transformer Option
Millennia circuits are inherently

to the accuracy and realism we seek.
But on aggressive sources such as

fans of transformer-coupled inputs

Class-A, all-discrete designs from
the 1960s. Our custom MIT-01

euphonic coloration, adding pleasing
distortion at high dynamic
levels and wide frequency excursions.
It may not be lifelike, but the
larger than life sound can really cut
through a mix.

Deane would run screaming from the room.. heh heh

I still want one of those STT-1's though...

How do you like the EQ?

DCThe EQ is a thing of beauty Don. Sweetness man.....major headroom when
boosting. I like the EQ section in my Avalon 737 and use it a lot during
mixes in subtracive mode more than anything else. It just doesn't have the
mojo when boosting that the SST's EQ seems to have so far in my testing.

;o)

"The most sublime comedy is unintentional!"

"let's go Dutch!"I wish. We finally got some rain today. Roof in the studio leaks..
I would love to see the Rockies right now.

We have 4 projects going at work... yikes...

>Well,
I was suspecting that for a long time but now I am convinced that Paris has
a limiter in his outputs !!!!
Yes either the monitor outs or the LR outs have a limiter on its outputs
that does not let anything go beyond that !
I found that -0.7 was a safe margin at the main outs and no matter how hard
I was driving the submixes and seprate cahnnels there were no overs !!
ou can see that on your mix that there is this chopped over waveform !!
Regards,
DimitriosYes.
If you raise your eq out to that level you see another quality in your digital
audio files.
I really love that sound too !
So its like DJ's preamp 176 different sounds from Paris, some iron sound
with this EQ settings is achieved !!!
Regards,
Dimitriosno, there is no limiter on the outputs

>>Dimitrios
>Here is the conditions of my test.
I am using the spdif out connected to Pulsar Scope spdif in and I am watching
the digital meters of the Paris out.
When using the 0 for Paris outputs there is a occasional digital clip.
When lowering under 0, -0.3 then the digital over goes away.
Now no matter how much you push the submixes into red ,nno matter how hard
you push the indivindual tracks into red the digital clipping never shows
in Pulsar.

What your describing is no different than if you had a mixer of any kind
and lowered the master fader. Your end output is not clipping even though
you may be clipping at one of many places before that in the signal chain.
That's still not limiting, unless you want to call it that.
Granted, Paris handles this kind of gain staging really well, and is one
of the reasons I still use it.

>Dear Rod,
As with analog mixers if you gain up channels you always have to lower your
main output to compensate.
In Paris leaving the out at -0.7 digital (always) no matter what you do with
your music you never clip it.
Your waveform though shows the clipping (cutting the edges of loud peaks),
so to me that sounds like a limiter !
Regards,
Dimitrios

It's way harder than say Paris & ProTools. Those 2 babies mix themselves.

Most of 06 and 07 I tracked and mixed in Nuendo or Pro Tools, summing out
to a Analog mixer (SoundCraft Ghost). While this a nice setup, Paris spoiled
me into having a dedicated DAW controller. So, for 08 my partner and I will
be looking into

-Tascam DM4800
-Digidesign C24(new)
-New Euphonix (new for 08).
I will be getting back to Paris in 08..I miss the sound. And, I will polish up and really master Slow-Tools.

>Hey,

First of all, thank you all for the responses to "OK, what about this then . . . " That was helpful and oddly encouraging. I am convinced to leave our trusty Paris rig alone, except for maybe 'nother card, more RAM, new HD. Maybe.

But here's another question: Suppose hypothetically that a person, such as myself, had a spare Paris system minus computer stored in a closet. Suppose further that this person, who we assume to be very good and kind, wanted to attach all this to a computer and have her very own Paris recording system. What would the best possible options for this hypothetical computer be? And how challenging to find the necessary elements?

Thank you in advance. :)

SDude, that's not funny . . . he might've been having a TIA (transient ischemic attack). You know, like a "mini-stroke."

Actually, I agree with Don's estimation, which makes it pretty funny, in a quasi-sacreligious way. :)

a world of improvement in stability and accessories like control surfaces
and vstis. That's just hypothetically though. :-)oh man, that's hilarious !!!Or it could simply be digital clipping that's being handled
well by the inputs of the Scope card... does it have a soft-
limit feature?

You bastards!! And I was stupid enough to click on the links!!! I
believe I am now scarred...and scared.

pabSarah-

for the mostest barest bonesest Paris system all you need is:

1)an EDS card (what are these now? something like $200?)
2)an interface (a 442 for $50 will work)
3)a computer
4)some headphones
5)some sort of preamp-thing
6)a microphone
7)cords to connect these items
8)you

I have such a system sitting right next to me right now. Works fine.

Check the for sale paris page for the paris stuff for sale.

Is there any real info about this stealth Euphonix product? Are you talking
about something they've officially announced or something they are going
to announce. There was the massive buzz and then . . . nothing. If it were
a 'C24 for native apps' I'd be all over it like stink on fish.

Just wondering if there's more info out there,

>Hey Neil,

I think this usually has a lot to do with the RAID chipset on the motherboard. If you put quality consumer level stuff in there, like 3Ware, I'm sure it would work smashingly. But a lot of mobos have really shitty Promise chips that are barely RAID at all, the CPU is doing most of the work and they step all over anything real time. With RAID gear you have to shell out for the good stuff.

It's worth it in some cases, and obviously the drive redundancy can let you

sleep a bit better. But in general I agree with you, basic IDE mode and basic
IDE drives are MORE than enough for what an audio user needs.

I just they had a 1200 emulation, but I bet I could get that somewhere else.
I think with the rock band thing I"m going to be sticking to SX, partly because
the other main guy in the band uses it, but for my own electronic madness

creations, I thinking it's going to be more and more Live and nothing else. My favorite DJ'ing software, www.djdecks.be even has a VST plug-in now, so I can work audio tracks from time code vinyl. Putting all of that together with Live's other super duper cool stuff, well, we're getting awfully close to TCB heaven. The only thing I'm really missing is a good controller for when I'm mixing.

Operating system-Windows ME
Motherboard-ASUS A7V8X-LAN
CPU-AMD Athlon XP3000
RAM-2 x 512MB sticks of Corsair XMS DDR PC 133
BIOS Rev 1.03 (I think this is the one..is the second to last bios that was
issued for thei mobo...the last bios is a POS.....stay away)
Get yourself a nice Seagate Barracuda 7200 RPM IDE drive for your system
drive and a 250GB Seagate Barracua for your audio.

It will be stable as a rock as long as you don't go trying to make it
perform unnatural acts with newer plugins that aren't compatible.
I've got a bunch of old DX plugins here here that will work great with Paris
and a windows ME operating system if you want to give this a go.I found this to be true as well, I mean the sawed off waves if you back down
the master fader when dumping a track

> How is it for tracking?

That's the only potential rub, IMO, but it's not insurmountable. Using the RME Totalmix allows very flexible cue mix options. It's just a diffrerent way of working. If you want to use the Cubase Control Coom function, you will need a computer and drivers capable of operating at very low latencies, but those are available now as well.

For a cue system, I'm using a Furman HDS-16 system with 5 x HRM-16 remote mixers here for zero latency monitoring in the tracking area. I also use an external analog mixer in the control room. for zero latency monitoring of the summing of the outputs RME HDSP cards during tracking sessions. I just patch the headphone outs to a Mackie MixerMixer and sum these to a stereo pair of line ins of a 1402 and then mute these and send them via Alt 3-4 to the stereo mix inputs of the HDS-16 with the mains sent to a Coleman switch box which is feeding my studio monitors. At that point I've got the zero latency functionality of Paris.

You don't necessarily need to jump through all the hoops I'm doing here. I've got a 3 x card system in one computer and then a second computer with another 26 I/O feeding the first computer. If you were running a single card system with a headphone output, you'd have it made.

I think John probably has a very slick HDSP 9652 based system. Neil is using the Multiface as his primary I/O. If I were using that card for my main DAW, I'd be looking hard at the respective kinds of setups they are using.

DeejI don't think they are all that expensive new, but for how often I would probably use it, I'd rather get the plug.

>My understanding was that a flat top wav file is an indication of clipping,
not limiting. That doesn't mean that you'll never see flat top wav forms
when going through a limiter, but it means that if you're seeing that, you
need to adjust your limiter. ;o) A limiter is really just a compressor on
a certain setting, so fundamentally what you see should look like a compressor

has hit it, which basically means a nice curved wav file just like what you started with, only louder, or at least with less dynamics.

For some reason the flat top wav files Paris creates don't sound like the flat top wav files that other apps create. They don't sound harsh and distorted. They just sound kinda louder and with some added harmonic richness, not entirely dissimilar to if you overdrive an analog circuit, which also, especially with transistors, tends to leave you with a flattish top on your file. This is not compression/limiting however. It's just a form overdrive which "hurts" less than other forms.

Functionally it's similar of course. Anything you do to a wav file will change the original audio, and limiters can easily lose dynamics obviously. Gentle overdrive can achieve the same end of increasing overall average amplitude of the signal, but the trade off is different. Basically, with overdrive, you keep the bulk of the original audio intact but just "completely lose" some small sections at the peaks. With compression/limiting there is a greater overall change to the sound (depending on settings and such) but you keep the peaks intact, albeit at a lower level.

Horses for courses yada yada.

What Paris does isn't a limiter as I understand it, but it can, in effect, fill the role of a limiter to an extent.

And the reason Chuck doubts your findings is that these claims have been made previously, and Chuck knows the inner workings of Paris as well as anybody here. He's looked through the internals of Paris code and can't see a limiter anywhere. Unless there is a separate limiter hidden on the EDS card which doesn't use any actual code from the Paris app, he's right. ;o) I'm pretty sure he is, in fact, right. :o)

Cheers,
Kim.

>But...from my observations, if you look at a compressed wave file that has
been compressed to say -.07dbfs, as an overall file, it will look like it's
been severely clipped.
If you go into sample level, you'll find that all the waveforms are nicely
rounded.
Don't forget, waveform graphics are just approximations, especially if your
viewing a large file as a whole.

te:
>> http://www.uaudio.com/webzine/2007/december/index7.htmlHaving spent a month in Japan
recently this does not surprise me at all.
They have a HUGE electronics department store that constantly plays,
over and over, day and night at high volume, throughout the store, a 4
bar melody that sounds like an old SuperMario theme.

The thing that shocked me was the girls had such big butts - most
Japanese girls are highly under-endowed in the booty department.

Just fade out the waveform; or copy part of it, paste it to
extend if you need to do that, crossfade that portion, then
fadeout the end.

There, I just saved you 500 bucks on an outboard box lol!

NeilPretty much what we did.

>Best DI box I've ever heard (and I've heard a few). I like it better than
the DI on the Demeter VTMP, Demeter HMP, Great River MP2-MH, Avalon 737 and
Millennia SST-1, UA 610 Solo and Avalon .U5. It doesn't have any tone
controls and outputs only 40dB but there's something so nice about the tube
circuit and transformer in this box that it's got a bit of a "woah!!!"
factor, even on my bland old P-Bass with passive pickups.

Shit eatin' grins like this usually cost in excess of $1500.00.

;oDYes, and there are software options too. But I'm treating Pulsar like PARIS,
great sounding gear that has essentially been obsoleted by the manufacturer.
I own a bunch of the John Bowen synths and some cool plugs for it, and it's
a fine mixer/router/patcher, but if I can get the same sound on UAD (I think
one of the companies with the brightest futures in the audio biz) over Pulsar,
I'd be foolish to go any other way.

I think I could probably retire my B-15N if it had similar shelving EQ's.
The newest REDDI has a direct "thru" jack to send the signal to an amplifier
simultaneously so I'll be using the B-15N to shape the directly recorded

tone at the amp mic'ed with a 441 while taking the full frequency signal
from the REDDI straight to disk.Retire that thing already..It really want't to come to Boston for the winter.

Now that I reread your post, I see that you already have the Paris stuff.

Ah well. Onward.

I know DJ said to go get such and such motherboard and ram some sort of magic amulet and who knows what else.

I went to craigslist and got an old cheap mac G4 that runs os 9.2 and set that up. No muss, no fuss.

I also set up an XP windows machine. A bit more muss, a bit more fuss. But it also works fine.

Why he's steering you towards windows ME is something only he and his giant dogs can tell you.

;)

>Greetings all.
I'm trying to transfer a clients' old adat multitracks into paris.
I have one ADAT module in mec 2.

I have successfully slaved an external cubase machine via adat sync and a
frontier dakota in the past.
The ADAT responds to the paris command "locate to present time", but starting/stopping
paris has no effect on the ADAT.
These machines are ADAT XT's.
Any clues as to what I'm doing wrong?
I understood this was supposed to be straight forward.
Thanks for any advice.
KimSo you're saying that Paris runs on XP, but just with a bit more muss and
fuss? And is it continuing muss and fuss, or once you've mussed and fussed
it's done?

http://rinf.com/alt-news/war-terrorism/us-signs-deal-for-lon g-term-occupation-of-iraq/1850/

(sorry Kim....it's OT, but troubling)Hi.
Following on from my failure to get an adat and Paris to sync,
I decided to try Cubase SX slaved to the ADAT. (via the adat sync on
my Frontier Dakota.
I have managed to get a Cubase project with all tracks sample accurate. (However,
start and end points differ between the two passes.)
I edited the start points and moved all regions to zero, in the

hope of exporting each track as a new file, retaining timing integrity.
My client wants to bring these files into PT.
Now... For the life of me, I can see no way of rendering these
into new files in Cubase. (SX3).
Samplitude does it, Paris does it, but am I screwed with cubase?
Perhaps I'm having a senior day, but I've spent a couple of
hours trying to find the magic command.
Surely Steinberg incorporated this feature somewhere??
Any light on the subject would be greatly appreciated at this point,
otherwise I'm going bowling....

Sarah and DJ,
Don't forget the native plugins. That's a large
part of the mixing beauty of Paris. What's the=20
usability of brand new VST plugs with windows ME ?

I'd do XP unless multiple ADAT cards were crucial.
It will keep your system one OS (operating system)=20
back rather than two.

Sarah's album is stellar.
Tom

Sarah PS: Windows ME is a stable but much older operating system=20
than Windows XP which is now older than the newest Windows Vista
which is difficult for many DAWs at this point. Paris is a no go with =
Vista.

------=_NextPart_000_008D_01C836E7.10125000--As far as I can see, my native insert VST plugins are working in both
WinME/WinXP when using "Chainer" and VST/dx adapter 3.3. Some of the
plugins are pretty new but from trusted firms like Voxengo, Kjaerhus,
PSP and Crysonic.

is it not called 'bounce' in cubase. I can't remember last time I did it
and I'm not in front of the machine right now, but it was definitely a

'bounce command'. The pain in the ass for me was that you have to do each track individually (although it wasnt sx3, so maybe not?)

hope you find it!

Erling,
That's good to know. How about the newer UAD versions?

------=_NextPart_000_0019_01C8372B.A8531E00--Tom, I don't use UAD anymore with Paris, so I don't know. Only using
it with Cubase 4 and Adobe Audition 3 on WinXP with an AMD X2 6000+
processor that I have just build.

Erling

You're going to need ADAT cards if you ever want to digitally interface =
Paris with any other system.....and eventually, if you've got a Pro =
Tools system there, you might.

Deej

 "Sarah" <sarahjane@sarahtonin.com> wrote in message =
news:47567f31@linux...
 Well, we don't need no steenkin' ADAT cards . . . got no steenkin' =
ADATs anyhow. Just a simple one (maybe two) card Paris setup with a =
coupla 8-in cards.

 Thanks,

 S

"Tom Bruhl" <arpegio@comcast.net> wrote in message =

Sarah and DJ,
Don't forget the native plugins. That's a large
part of the mixing beauty of Paris. What's the=20
usability of brand new VST plugs with windows ME ?

I'd do XP unless multiple ADAT cards were crucial.
It will keep your system one OS (operating system)=20
back rather than two.

Sarah's album is stellar.
Tom

Sarah PS: Windows ME is a stable but much older operating system=20
than Windows XP which is now older than the newest Windows Vista
which is difficult for many DAWs at this point. Paris is a no go =
with Vista.
"Sarah" <sarahjane@sarahtonin.com> wrote in message =
news:4755e362@linux...
Wow, a complete recipe! Thanks. So, is this stuff I can get at =
my local=20
computer nerd parts store, or do I need an antique technology =
store? And=20
what's Windows ME?

Oh never mind, I can look all this stuff up. Hey, if you run two =
EDS=20
cards, do you also use to C-16s, cuz that'd look pretty cool. :)

Thank you doctor,

Sarah

Erling,
Well that sounds sweet! Do you run the UA live during Paris mixes?
I was wondering if that would work for me. Then I would put the UAD
in my Cubase rig also. If so how do you deal with the auto latency
comp in Cubase to/from Paris?

By the way Cubase 4 ver 4.1 is out.
Tom

Tom, I don't use UAD anymore with Paris, so I don't know. Only using
it with Cubase 4 and Adobe Audition 3 on WinXP with an AMD X2 6000+
processor that I have just build.=20

I'm not really too concerned about the base there. This piece of paper is only as valid as the administration(s) that signed it. Iraq or the US could unilaterally cancel it at any time. I don't see either party raising holy hell about this so the Democrats are onboard with it as well. After all, cheap oil means that they can claim economic prosperity as well if they are elected.

What concerns me is that we are going for a short term panacea..Maybe 20 years and we're going to be right back in the same situation if we don't develop our resources here and seriously ramp up our technologies to deal with the inevitable "peak oil" situation.....and we won't do that. Once the price of oil stabilizes, we will fall back into the same old habits.....we always do once the pressure is off .....and when this happens again, it will be exponentially worse.

OK, I'm done.

DeejTom, I'm using different computers for Paris and Cubase/Audition. I found out that there wasn't so much difference between UAD plugs and quality VST plugs in Paris, so for my simple use, the UAD card found its place in the new computer, only to be used with Cubase4.1/Audition3 and Paris is using VST inserts.

So true. Our greed and complacency hold us hostage, but nothing like what
it will in coming years.
Then there's the suspsected coming water war, esp. here in the west.....

Anyone see that Ted Turner has been buying up land in Nebraska, South
Dakota, etc?
2 million acres now - most of it right over the Ogallala Aquifer, the
world's largest underground water system.
I'm sure he just wants to be a rancher and ride fences over his 2 million
acres - should only take a year or so
depending on how fast his horse is. ;-)

Back to music....

Boone Pickens has been doing this for years. Ted's a humanitarian. He's just
buying up all those water rights so the evil Pickens won't be able to get
them and he can, in turn, keep the price of water below $100.00 per barrel
for the good of humanity.So do you think this is a jousting match between Turner and Pickens to see
who controls the AL
for western and Texas water useage? ...and longterm, a power play for
control over water
for the west so we serfs can be dehydrated of our bank accounts?

I think Turner saw an opportunity to make money and he is taking advantage
of his great wealth to make more money. Plain and simple. I also think that
if they start trying to control downstream access to water, their lives will
be shortened by a few years. There are a few good ol' boys around here who
will pick them off at 2 miles with .50 cal rifles if they can get in range.
People kill each other over water rights in Colorado. It's a tradition.

;o)Since my family and I are basically transplants and not fully familiar with
most Colorado traditions (other
than skiing :-) are the less violent ones we can participate in? ;-))

Well.....skiing is good here. Dec 1 was opening day at Silverton Mountain, Purgatory and Telluride. They actually had to close the lifts at silverton because they couldn't dig them out of the snow fast enough. They had to refer everyone down to Telluride or Purgatory. wolf Creek got 28" in 24 hours last weekend. Of course when all that snow starts melting, it turns to water.....and people die.....
;o)Well, I dunno, Sarah. I don't buy the 'cheap oil' argument all that much. It would have been a hell of a lot cheaper to just drop sanctions on Iran and Iraq and buy oil from them, they were more than willing to sell. Additionally, oil is not cheap, in fact, it's almost as expensive as it's ever been (inflation adjusted oil was north of 100 of todays dollars back in the late 70's). Also, expensive oil doesn't really benefit oil companies all that much. The price of the commodity has skyrocketed while the price of the retail products it is used to create has not gone up at nearly the same rate. What this means, of course, is that we were getting seriously gouged back in the early 90's when oil was $8/bbl and gas cost $1.89/gal. The expensive oil really benefits whoever happens to have the stuff in the ground, as the cost of extraction is a (relative) constant. So, in addition to greatly helping 'allies' like Saudi Arabia and Kuwait, high oil prices are the lifeblood of all kinds of supposed 'enemies,' Venezuela, Nigeria, Russia, Iran, Libya, etc. In fact, any believing Christian must think it a real godly thigh slapper that he decided to stick so much of the really good natural resources under the pitter patter feet of so many non-believers of various stripes. From Mohamedans to animists, to the distant descendents of Zoroaster.

Anyway, why invade Iraq? At this point I'm leaning toward what this article rather floridly describes--permanent US bases in the region. The Saudis impolitely asked us to leave some years back and Kuwait and Qatar aren't really enough. Look at the map, I don't suspect Yemen or Iran would be champing at the bit to invite us in. The US has traditionally wanted large military bases near maritime choke points and the strait of Hormuz is right up there with the Strait of Malacca, and the Suez/Panama canals in the choke point department.

Either that or the Iranians pulled off the greatest intelligence coup in the history of mankind. Or I'm missing something really obvious.

Actually it was a test. A test to see if we were wise enough to
understand the dangers involved in becoming symbiotic with
the middle east. A test to see if we were smart enough to
find our own resources and stay independent and free.

We flunked...

DCYou can select as many tracks as you want, then right click and I in one of
the menus you should see a "bounce selection". You don't have to do one
track at a time in Cubase SX4 ... unsure about SX3.

>Hi Kim,

I've done a lot of ADAT transfers with my ADAT LX20 and PARIS.

Here's the skinny:

You have to be using Windows 9x/ME.
You should set the master PARIS clock to 48k even if your tapes are at 44.1.
 What the heck - they transfer quicker this way, and PARIS is happier.
If the drive doesn't respond to the playback command, turn it on and off

again until it does.

It's a pain, but it does eventually work.

I hope this helps,

Mike

PS - the ADAT code under XP is one of the things I'm dying to get to work on - just 400 more pages on my WDM Book to go. :)

You're right. One offs don't bother me. :o) It's when we start getting 3 new political threads a day for 3 weeks and the politics to music ratio is still on the slide that I start going "OY!". ;o)

I actually think people should talk more about politics in society, but there comes a point where this is a music forum and posts have to stay mostly in that direction.

Anyhow, as you were. ;o)

Cheers,
Kim.Thanks Mike.
I'm running XP, so I'm stuck with transferring to Cubase, and
rendering the files one by one.
It's gonna be a long day.

------=_NextPart_000_0D70_01C8375B.8DDE8020--Well, i've been spending a lot of time with these and while they sound good,
they are not my end all, though I do like them a lot.

I have some very big cerwin vega's with 18" woofers and my mid level car stereo that I also compare with and I'm finding that the really low bass notes get over compensated on the rp5's. For example, the big drum solo on Abbey Road has a really nice set of low toms on it. On my vega's they sound full, tight and really natural, actually GREAT ! On they KRK rp5's they sound muddy, period. So what I did was setup a loop and played the drum part over and over while A/Bing the two and I found that when I run an EQ that has a ramp from 100 db (0db) to 17hz (down -6db) I get a much better approximation of the big vegas and it translates much better to my car system. It's still not perfect and todays car listening was too bassy so I may end up only ramping down 4db or so but this at least has helped prevent the rp5s from trying to produce really low bass that is just can't.

over and out so far.

Tried that, but all it does is make copies of the original files.
It doesn't create new ones that reflect any edits.
Cheers.

To all that helped or are just interested,

You may recall in July I had a major league meltdown
of my 5 card/Magma/2 Mec, Lucid WC system.

I tried adding two more Mecs with a Mixer Mixer to allow

4 aux buses to tie together. As soon as I tied Mec #3 into
the mix Paris wouldn't boot. Later I was taught me to remove the
Paris Default Project from the Paris folder to help this situation.

I then hastily booted up Paris with a Mec half plugged in and sparks =
flew.
That mec is unrepairable. We tried. It smoked a chip in the Master =
section
labeled fP94AD
        DM74LS
        244WM
I bought 10 of them (SN74LS244DW) at Digikey.com for short money.

After this point I could never get the clock lights to lock or Paris to =
work with or without the
Lucid involved. My tech was right in assuming the same chip was fried =
across
all of the other Mecs. I later realized that a bent pin on 2 x SCSI 2 =
cables were
probably frying that same chip in every Mec I bought and tried (no smoke =
though).

Fast forward. During all of this I removed the Magma, Lucid and the =
main Paris computer.
I built a new (old) Paris computer using Dimitrios' Root C installation. =
 This has to be helping.
I also eliminated Pace. I have installed everything including 4 EDS and =
a UAD into this computer
along with more quality plugins than my previous rig. It is stable and =
very powerful.

The chip that was stated above has been the cure all for all of the =
fried Mecs except the
first that actually saw sparks. So if your clock stops locking on a Mec =
this chip may be your savior.
It only takes a little over an hour for the whole job once you've done =
it a couple of times.

Thanks to all that helped me through this namely Mike Audet, Rod =
Lincoln, my tech Dave Matheson,
Jon Jiles, Paul Artola, Justin LaPierre, Dimitrios, Deej, Kim and one =
other person that I bought a Mec from
whose name escapes me.

Thanks to this whole group for all your answers!

Bottom line - all is better than ever in Paris.
Tom B.

------=_NextPart_000_0114_01C83794.44C2BE40--Yep. To export edited files you have to either do them one at a time or use
a third party utility. LaMont turned me on to a program recently called Tape
It 2 by Silverspike.

http://www.silverspike.com/

Set it up as an insert on every channel of on a Cubase Template so it is
always there for what you need. It hardly uses any resources. It's a bit
tedious compared to Paris, but it does a great job.

------=_NextPart_000_0E81_01C837DF.26D09E20--Yeah DJ, troubled is right. This whole damn thing just rips me up, thinking
about it, trying to understand my feelings about the "war." I've got no
good answers, but here are some of the questions that vex me:
-Doesn't the world really run on oil? It ain't just our cars, its that trucking
industry, the shipping industry, the industry that makes all the parts for
all the other industry, its in the damn keyboard I'm typing on now. So,
is switching, within our lifetimes, over to an alternative fuel source really
possible such that we have no dependence on OPO (other people's oil)?
-In the world of geopolitics, our relationships with Russia and China matter
(to them and to us) -but how much, and for how long?
-Is some quantity of oil or economic "stability," or "dominance," worth even
one life?
Funny creatures we are.

Oh no you di-int....

A long time ago, back in the autumn of 1952, when Bing Crosby was filming the movie "White Christmas" in New Hampshire, the Mayor of Nashua, NH thought it would be a great idea to have Bing visit their fair town & present him with the key to the city on the steps of City Hall. You know, a nice little photo op for the mayor's re-election & a
way for some of the town's dignitaries to meet the Great Bing Crosby.

Now one as to remember, Bing Crosby at this time was at the peak of his
singing career. He was bigger than Elvis, the Beatles, Sinatra & the Beach Boys all put together. He crossed generational lines, admired by
young & old as one of the "coolest cats" in the music world.

Well, word leaked out that Bing would be in town so hundreds of teenagers skipped school to attend the little ceremony. The authorities
were not prepared for such a large crowd, there were only a few policemen present, and things soon got out of hand. Pushing & shoving
began as the teenagers all wanted to get closer to see their hero. It
soon looked like the Mayor was going to a have a riot on his hands and
he was growing more frantic by the minute. All he wanted was a nice little ceremony with Bing and now he had a full fledged uprising threatening to ruin everything.

Throughout all this Bing was seated in his chair, calmly observing what
was happening. When the crowd started to push through the barricades that were set up, he had had enough. Bing got up, strolled to the microphone & said in a commanding voice, "All right, everyone cool down
right now"! The rioting crowd immediately calmed down and the Mayor's little ceremony went on without a hitch & everyone went home happy.

The next day the headline in the newspaper read: CROSBY STILLS NASHUA YOUNG!!

Merry Xmas to All!!!

>...How many of you nice folks actually record music (with or without Paris)
for your livings? About 13 - 14 years ago my studio began to out-earn my
gigs playing guitar in local bands and it's been my primary source of income
all this time. The problem is it's not working very well anymore. I hardly
do any demo work for bands these days. The last demo project I thought I
had lined up ended up going to a friend of their guitar player's house -
a lawyer with a Protools studio in his basement. The price? Nothing. I
couldn't compete with that! I haven't done any jingle work in years. All
the jingle writer/producers seem to have their own setups and use the big
impressive studios for clients who want to see receptionists and 30 foot
long consoles.

So I'm looking for a "real" job. My wife quit her job to home school our
10 year old son (and probably our 8 year old daughter once she has a groove
going) and I can't support my family on what my studio makes. Which, at
the moment, is almost nothing. I've thought about marketing myself as a
"recording consultant" to help people build and use their home studios but
I'm not sure how to go about doing that. I've also thought about marketing
my guitar playing skills for home recordists and maybe trying to get mix
work.

Sorry - I don't much know what I'm looking for here. I guess I'm just whining
and venting a bit. I suppose I had a pretty good run. Now it's time to
go sell video systems for the local music store. Or drive a school bus!
 I'm told our county school system has great benefits. I'm about to turn
56. Seems a little old to be trying to figure out what I'm going to be when
I grow up!

Thanks for listening. You people have felt a lot like friends to me over
the last 5 - 6 years that I've been hanging out here almost every day.

Like they need much help...

I think we can all agree that our dependence on that region
for energy sources has given rise to much foolishness and
danger to all of us.

I used to record classical and teach audio for a living. Lousy income but lots of fun and interesting people to work with.

Today, I have a fulltime job in systems design and install. Sometimes I love it, sometimes I hate it. Many times I think I would take another job with an orchestra or college in a heartbeat, but overall I am pretty happy with what I do.

There is no money to be made at the middle of the studio market, as you have seen.

My advice would be that if you can find a real job, stable, health coverage, pension, etc, take it. Do the recording on your offtime.

I may be giving myself the same advice in a few months if our work dries up!

my .02

DCGood points.

One thing I would add is that there is plenty of oil out there, and we need to get that oil so we can move away from OPO ASAP.

Alternatives should be developed as well, but the emphasis must be on our own oil supplies in the short term. The issues at hand are too large and too important to not act now.

Every SINGLE adminstration the OPEC oil embargo has utterly failed at this vital task and now we are paying for it...

>Gantt.. you aren't alone. I don't make anything from recording either .for
my day job, I'm an electrical contractorbut would much rather write and
record for a living . we are in the same boat. the music industry is harder
than ever to make a living with.the only good thing about the studio is
getting to write off the equipment .($250,000. + so far for me. what a
sucker huh?)
It keeps me out of trouble and is something positive in my life .I say just
hang in there in your spare time.we all have allot of time invested in this
craft .maybe the industry will turn around.

ramifications of atmospheric effects.

"Plenty of oil" is also relative to the price we are willing to pay in terms of dollars, armed conflict and political intervention.

All of that taken into account, betting the farm on oil is a short term gamble at best.

For longer term viability we need to invest heavily in developing other sources of energy, using energy more efficiently, and developing strategies for polluting less in the process.

Oil is not sustainable in the long run, nor will it last forever. But we have the opportunity to use it to help transition to a sustainable future now, if we're smart. Or squander it and wonder what happened later, if we're not.

Cheers,

>Hi all

I'm posting for a guitarist friend who's looking to get a better audio card
to record and transfer files from his 002r

He needs 2 audio inputs and the rest in light pipe -16 tracks minimum (he
says)

I suggested the Lynx series as a starting point for both quality and price
and he thought that was reasonable

Ant other suggestions.

Please send links if you can so I can C&P them to him

thanks in advanceI think methane is the answer. It's always been here and it's always gonna
be here as long as we are all full of shit, and since that will be the case
as long as we eat and breathe, don't you think it's time to get our shit
together?

;o)

>>Hey Deej,

My wife and I have this discussion regularly. You should know the
answer to this, but it seems to me that between the new
discoveries in the Gulf of Mexico and the oil shale, and other
opportunites, we should be able to put enough pressure on
the oil producers to remove the political blackmail from oil use.

Now, I realize that the greens will want to use any chance
they can, but really, as important as alternatives are, they cannot
do a thing for us in the short term.

Why don't we do this:

Get enough of our own oil to take the power away from oil
as a weapon, and develop alternatives at the same time.

Seems reasonable to me, but every time we talk about it,
someone starts saying geothermal, hydrogen, solar, wind,
etcetc like those things mean a damn in the near future, when
everyone knows they don't. So develop them, yes, but first,
oil independence. Seems to me that anything else is foolish
and dangerous.

What do you think?

DCI'm trying to figure it out also. I've been out of the commercial studio
business for some time now. I just record project demos now days for friends.

I've been doing automotive design and CAD system administration. Detroit sucks, I'm back to looking for work again. I might start selling pro audio equipment again, but it's a tuff way to make a living. I'm also thinking about going back to school for ultrasound tech/ vascular tech. Not my cup of tea, but there will be work and I won't have to change bed pans.

>GanttThe Barnett shale formation is being expolored in a very serious way in
Texas. there are huge deposits of shale in western Colorado. they will be
developed, but not before the price of developing it gets so ridiculous due

to bureaucratic red tape that only the majors will have th4e money to play the game and then the prices will be fixed by them. No way around it. the nvironmental lobby in western Colorado is going to add 20% to the production costs of f recovery and that will be passed along. Good or bad??? Doesn't matter. It will happen. there are 128,000 gas wells oprojected to be drilled along the western slope of the rocky mountains in the next 10 years. I'm so usy here I can hardly find time to get in the studio these days. 16 hour days are getting old.....16 hour per day billing averaging 6.5 days a week is not. My studio could never bring in that kind of revenue. There aren't that many people these days that know how to do what I do. The young people who were getting into this field in the late 70's bailed out when it went belly up in '82 and then everyone went into the computer field. I'm among the last of a dying breed.

>I'm sure there's a lot of people in mid-sized studios that are hurting at the moment, and more to come.

I was discussing similar issues to this with a friend of mine in photography. Photographers have suffered in a similar way from the onslaught of technology, in that the digital revolution means that every man and a dog carries three cameras everywhere they go, and suddenly things like weddings are being photographed more and more often by some random who happens to have a digicam worth a little more than average.

The photography one is even stranger though, as a really good camera hasn't changed much in price. Well, perhaps the last 123 months have changed that, but in 2006 a $300 digital camera compared fairly much to what you might have got in an "analog" camera for a similar wage percentage ten years earlier. I remember buying a half decent film camera in 1991 or so for $20 second hand. Picture quality for price hasn't changed, but somehow because people have become so used to happy snaps, it's been accepted that we don't need those photographer people any more. We'll do it ourselves. And indeed, where I stand, I remember in 1990 a photo was a big deal. People would get ready. All stand together yada yada. Now somebody just walks up and says "Strike a pose!" and it's done. In some ways it's good, in others bad. The photos begins more to resemble real life, and what actually happened, but there is still nothing like a true craftsman to bring out some underlying beauty in something, and I think it is a loss to have less of that.

In one sense however it is a positive thing, in that when the industrial revolution began way back when, they talked up how much more efficient things would become, but the truth was that only the rich could afford most of the massive machines which were invented. I'm sure a camera in 1920 was worth enough to mean that only the rich could buy one, and then charge the poor to take a photo of them once a year and make a mint. Now anybody can afford a camera. Anybody can make a song. Anybody can print things. Anybody can make a film.

It's got to be damned painful for those who have worked hard to put together the cash to make money out of these livings, but on the other hand for those who were just never in a position to do so for whatever reason, it's a godsend. People who had the passion and creativity but not the cash are now in a position to make a move. The hard part is that, as we know, you get a lot of people who have the passion, perhaps creativity, but not the knowhow, and so the quality of product sometimes goes down a little, while people who know the craft point and go "That's shocking! Why didn't you hire me!".

Still, it's a kinda mixed thing at the end of the day.

I kinda accidentally counted myself out of the whole thing from the start. I did get Paris with a dream of starting a studio, but in the end I really knew that Paris' low price point was a sign of things to come, and that the

time until home studios were cheap enough so that most people would "do it themselves" was not far off. Yes, there's still nothing like top quality gear, but the quality of pro-sumer gear is now very nice, and a skilled person with some well chosen $200 mics and maybe one or two better ones can pull off a very nice job on many things.

I just hope that it does mean we start to see more creativity coming through from those who previously couldn't afford to get involved. Otherwise it's kinda all for nothing.

Cheers,
Kim.

giving them excellent rates so they they will come back and bring their
firends. I also do CD projects for free for clients I trust who are
performing musifcians and sell their CD's at gigs. I get a pretty hefty cut
per unit sale so it keeps a bit of mailbox money coming in. One of my
clients is getting pretty well known and is bringing in some business with

deep pockets, but to quit my day job right now would be financial suicide.

My studio is either gong to be a supplemental retirement income or I'm gonna sell it and put the money in investments. I gave up the idea of making a full time living with it years ago.

Been makin a full time living in the music business since '72. Can't figure anything else to do... In these current times of failing studios, I just opened another new one. I was fortunate to have taken over a studio I built in the 90's (one of several I have built and owned here in Colorado since the late 70's), so i did not have to do anything but move in. It's pretty big, and there is no way I would have spent the money it took to build it back then again. It has a main studio, an overdub suite and a third small control room. I am using the main room--the B studio is/will be geared at independent engineers, and I am renting the thrid control room to a producer/arranger scoring guy. Given the fact that I had enough gear to stock the A room, and will be adding a PTLE rig in B, the startup costs were minimal--the only way to survive these times. I just added a 7'6" grand piano, which is already bring business in. That combined with an establised rep and client base, and I may just make it work...:) The writing on the wall dictates a PTHD for the A room shortly to attract the independents...

I also play around 100 dates a year as a musician, play a lot of sessions, do some studio consultation/install for some clients, and probably some other things I am forgetting, though legal :)...

I feel pretty damn lucky to be pulling this off at age 54--gotta make it at least another 10 or 12 (I will be 64 when my son graduates from high school...). It's a strange time, but if you keep your eye on the landscape you can adapt. I would hate to be graduating from Berklee or somewhere and be thinking about doing this for a living...

my son graduates (or whatever it is that home-schoolers do) from high school.
 Then I have a daughter 2 years behind him. Whew. Maybe I should move to
Colorado to try to get a gig in your studio!

playing, consulting, recording, renting out space, etc. I think
in this day & age you have to be nimble - or at least willing
to be so. That goes for nearly any business, not just music.

Me, I do this for a hobby, and some occasional additional
income. If I were to quit my job, or retire early/whatever, i'd
go with the more diverse route, as well.

OK!!!! THAT'S ENOUGH!!!!

You - Nursie -- go to your room!!!! Right now!!!

Your punishment will be having a pair of Koss Pro4AAA's duct-taped to
your head, while you get Britney Spears in one side, and endless
Nickelback in the other, with Yoko Ono's solo material at the same
time in both.

Fuck... the Nickelback alone would kill me.

NeilThanks

You know, I believe that we need alternatives, and that a lot should
be spent finding them, but we are in a real fix because it is so hard
to find and refine our own oil. Our own oil IS the geopolitical issue
of our age. Now show me a candidate who gets it...

>Composing is tough if not non-existent in local markets. The larger markets are highly competitive and saturated with music school grads with composition degrees, so it takes some spec work, really brushing up on your skills, putting together a demo reel, preferably with score to picture, and getting to know directors, producers, etc.

That said, I know guys getting good work with minimal traditional composing chops but a lot of experience with apps like Reason, Acid, etc. Not what I really consider true composing, but there is a market for that style. Likewise, there is a market for pop, rock, R&B, etc music (e.g. not just orchestral). My suggestion would be to pick your strength and focus on it when putting together a demo and marketing yourself.

For post, the best route is to get to know directors, producers and video/film production companies in your area. Sometimes a director/friend can get you started by just being willing to give you a shot, then you can network from there.

Let me know if I can help in any way. Feel free to email me offline.

Regards,
Dedric

>odd thing... I am trying to get more into recording... and less into the day
job...

I recent left (well... got canned) an ops mngr position at a radio cluster
here in detroit, and i have been doing independent projects to get by....

i have a couple of irons in the fire for possible day gigs, but times are
tough...

a couple suggestions for ya...

if you absolutely need cash, radio CAN provide decent cash for people with
SOLID production skills. . . it also helps to have a decent voice, but someone
who truly knows how to make things sound amazing is a true find now days...

call all your local stations and tell them you are available for any production overflow they have. branch out to others in the general area ... offer a competitive rate .. and you will pick up some folding money.

another thing I am doing that is similar to what DJ suggested is offering to local bands free recording of their shows, and on site duplication of them on CD... I have 3- 10 tray duplicators that can churn out 200 in a half an hour... just plug into the club board, record into your favorite 2 track.. light mastering/normalize... and by the time people are lining up to buy the disk (which the band has to heavily promote on stage) the first 30 are done....like getting a bootleg... but is actually audible.

also... I am offering to school bands a fund raiser package ... we take care of the licensing, duplication and recording... they sell the disks... all pre sale. after the concert, bring home the recording, master it... and burn the appropriate number of copies. full color disks with a color insert. we are selling them for between $15 and $20 a piece(depending on various factors) and giving the band fund a VERY good percentage. I have even sweetened the pot for schools by adding a free Ipod shuffle to the kid who sells the most disks(minimum 10), and $100 to the art student who creates the cover art. this is starting to take off pretty well. the big selling point is the licensing. . . the band directors love not having to deal with it, and frankly... it isn't that bad.

I totally understand the kids thing... I have for girls ..13,9,4,and 2... and we have number 5 on the way... gotta bring the cash in somehow...

scott hTom - that's great news man!! Glad you finally got everything all dialed in!!

Cheers,
Jon
