<http://www.emu.com/support/files/download.asp?centric=746>

BTW, that keyboard was in the music store where i took guitar lessons when i was a kid...(i soooooo wanted it back then!!)

God bless,
Greg

Could easily be Texas, too!

mcYes, but where's the kangaroos?-)
Have two danish grandchildren that's coming back to Denmark from Australia after being there with their father for 5 weeks. Don't know where yet. They're 10 and 12 years old. I think I'll send them the picture to hear what they're saying ;o)

>So for those who aren't aware or don't remember I was talking
to a buddy who is building a new studio.He wanted me to start
working out of there and I probably will.Right now I like the
idea of having a place away from the house.Having 4 year old
twins around makes the recording/mixing schedule much less
flexible in the basement at the house.In addition I'll be gaining
access to nice bigger rooms and more gear.

The site for the studio is www.musiccreekstudios.com if anyone
cares to look.You can click on the picture and it will bring up
some more pics;preliminary site right now.

Anyway it is a Neve VR and hes doing the PT thing mixing back
out through the Neve.Right now I'm trying to figure out how/if
I can incorporate PARIS into this scenario.Reading Gene's post
on his new setup I'm wondering if this might work:tracking
through the Neve to PT,then back out to the Neve and analog gear,
then into PARIS.

But then I'm dealing with TDM plugs in PT which maybe defeats
the purpose.I could track to something else I guess besides PT,
but that might complicate matters as he will always do PT.

Whatever I do I like the idea of being away from the house with
bigger rooms(the drums sound really nice in there)and some higher
end gear to learn a little about.I think my C7 will sound nice in
there.Maybe the VR is redundant now a days,but it can't hurt to
get some time in on a board like that I guess.

Any ideas on this whole outboard analog/DAW thing in this
situation greatly appreciated.

TIA,

Pete RuthenburgRoo? Where's Steve Irwin? ;>)

Wow! Well I am glad to hear that the product sounds better then
the demos. Just goes to show you once again, as with PT's, you
can sell something to people even if it (apparently) sounds bad
if they like the booth girls! Or if they are told "everyone" is using
this...

What a business we are in huh?

DC

and you have to wonder what were they thinking? Hey let's have
crappy sounding demos, and our pro users will straighten things
out for us... yipesWhat version of PT does he have & which convertors?

Why don't you record to the 2", then bounce to DAW?

Neil

You want me to forgo our beloved PARIS on my projects!Shame;)

I was thinking you might tell me track to PT,back to Neve for analog processing,then
to Nuendo for UAD ADC,then to PARIS for
summing out to a 1/2" machine all with Myteks;or something more
complicated:)

By the way was it you who bought those Myteks fs recently?

>Tony,

I have converted those .wma files to MP3's and e-mailed them to you. the
..wma files were DRM encoded. I don't have a clue how that happened-it
certainly wasn't intentional on my part. I think my WMP did it somehow
without my catching it. Anyway, being the lazy ass slacker that I am, I
decided to figure out a way to defeat DRM so I wouldn't have to get up, walk
into the other room, boot my DAW, convert the bounces to MP3, then burn them
to a CD. It's pretty easy really.....at least I think I have succeeded. It

just requires the sacrifice of one CD. All you need to do is to burn these copy protected files to an Audio CD (I used Nero), then rip the CD and save the files as MP3's. That's what I did with the files I sent you. I don't notice any audible degradation. Let me know if the DRM copy protection shows up on your end. It doesn't show up here on the MP3's so don't think it will be an issue with the files I sent you.

Cheers,

Deej

expensive for 48X48! Ouch.

source DAW or a real-time 96K>44.1 multi channel samplerate converter with ADAT output.

I think I may be able to force my Klotz converter to do the conversion to DASH and then use some of my old Yamaha gear to switch to ADAT. If it works, I am putting myself in for the wacky setup award. When the Klotz was built the high end was 48K, but it is rated to 100K with an external clock if my

has not helped, and programming it is a pain with the mini DIP switches. Time will tell. Of course using the disk as indicated by the other guys will allow the keyboard to boot up, but it still wont have any actual sounds in it. You'll either have to sample some sounds yourself, or aquire some disks with sounds on them to use with it.

Cheers,
Kim.

If I had that setup I would track to 2", and probably bounce to Paris to mix, or perhaps to PT, depending on what kind of plugins I needed, but in that case I would mix/sum through the Neve. I've used one of those before, and they really don't suck.

I would definitely NOT mix in PT Mix Plus... HD yes, Mix systems, no way - not if I had better options available (which you do).

Will it accurately predict winning Powerball numbers?

:)Howdy.

I don't see the point in returning sound to Paris. Summing on a good quality console is the best way for sure.

I haven't needed support for Nuendo/SX yet, so I can't comment there. The forum is knowledgeable enough usually that I don't see needing direct support.

Support was poor with Logic also (at least my attempts to contact email support never got answered) - non-existent basically. I have a feeling this is a limitation with smaller (smaller than Digi) companies overseas. US support is limited. Then again, I never had much luck with MOTU, but supposedly they are better now (no more part time Berkley students I guess...)

There is no reason why Nuendo itself would sound bad anymore than Samplitude, DP, Logic, Sonar or SawStudio, or Paris for that matter. I would never use a tradeshow to judge audio quality of anything. For sure, there is no telling who setup the rig and what gear they used - hardly a sound engineering reason to write it off. As Bill replied - the demos aren't great - kind of like one of the Paris demos I heard - and Logic, etc.... For some reason some of these demos think dropping in some mp3 loops constitutes a demo of a professional recording app.

I've produced rap, rock, pop, dance, acoustic, orchestral, etc - Nuendo sounds great. Also I think some people pop up built in EQs, comps, reverbs, etc, run a mix, and assume that's the sound of the DAW. Makes me wonder where these people learned engineering... Like all things, even mediocre gear/plugins can work in the right situation (see last comment below).

- >

Bit for bit cancellation with what? Another PT rig? For sure. With Samplitude or Nuendo? No way if you use audio files with more than 16 bits of dynamic range. I know other users that have tested Samplitude and Nuendo and gotten the same cancellation results. FWIW, Lynn Fuston has a DAWSUM

sampler testing this very thing for anyone interested.

This is a long debated issue that so far, as a Nuendo user, and former Paris user, I can't find a reason why Samplitude would sound any better - either technical or audible, and I've tested both ways. I think the truth of the matter is sound is 50% perception. Some think one DAW will sound better, and it does. Put a Samplitude/Sequoia wrapper on Cubase SX and I bet 8 out of 10 listeners will think it sounds better. Some users claimed v2 sounded better than 1, but they were the same audio engine - just a different look.

What many people never take into account with testing is trying to run regular mixes, substituting in different EQs, etc. Sorry, won't work. To be valid, all gain changes have to be identical, or set to 0 if they can't be set identically. Pan law has to be the same and not just in setting, but in performance (verified before testing). Then you have to use audio files that exercise the full bit depth of the app (24 fixed or 32-bit float files preferably). With a large set of audio files, this is a valid DAW comparison approach. If that cancels even to -100dB, you would be hard pressed to say one sounds different than the other.

When I have time, I will run an even larger test (to address those that claim one DAW handles 40+ tracks better than another).

>

> Also, one big plus with Sequoia is Jeff Sheridan who will actually
> take time from a big project to talk tech with you. Priceless.

Cool - Elliot Scheiner has a guest Q/A section on the Nuendo forum. He uses the Nuendo EQ from time to time. Most of use dismissed it as typical built in crap. He likes it (for slight cuts). I think it's okay for that purpose, but not critical EQ. It is a step up from built in EQs of DAWs in days past (but not as good as Paris').

These forums are absolutely priceless. I did try to contact Steinberg once. Hopeless.

Digi is quite responsive, and they write good manuals. Perhaps this is another reason for their success. I have built 2 PT's rooms

now and Digi was great. One of the issues involved was really hard to sort out and through talking to us they actually found a bug in the app.

Too bad the product is so mediocre...

>Support was poor with Logic also (at least my attempts to contact email support never got answered) - non-existent basically. Then again, I never had much luck with MOTU, but supposedly they are better now (no more part time Berkley students I guess...)

I did call MOTU about (a DP question) 2 years ago, and it was better than dealing with Steinberg, but nowhere as good as Digi.

>There is no reason why Nuendo itself would sound bad anymore than Samplitude, DP, Logic, Sonar or SawStudio, or Paris for that matter. I would never use a tradeshow to judge audio quality of anything.

Well, I don't know about that. Somehow both Paris and Sonic Solutions had terrific sounding demos at more than one big trade show.

It's not that hard.

When a company settles for sounding like garbage at a trade show, there is something wrong with those who run that company.

I first heard Matchless amps, the new Telefunken mics, Fearn preamps, Soundelux mics, and about 50 other things at big trade shows, and all of them sounded great both there and in daily use.

>For sure,
>there is no telling who setup the rig and what gear they used - hardly a sound engineering reason to write it off.

As a client, you have to conclude that someone blew it. Either the trade show people, or those who created the product. How do you know? Well, when a pro like yourself tells me it sounds great, that carries a lot of weight, but the company could have

done as well as others have done and they didn't.

>Also I think some people pop up built in EQs, comps, reverbs,
>etc, run a mix, and assume that's the sound of the DAW. Makes me wonder
>where these people learned engineering... Like all things, even mediocre
>gear/plugins can work in the right situation.

Absolutely.

>Bit for bit cancellation with what? Another PT rig? For sure. With
>Samplitude or Nuendo? No way if you use audio files with more than 16 bits
>of dynamic range. I know other users that have tested Samplitude and Nuendo
>and gotten the same cancellation results. FWIW, Lynn Fuston has a DAWSUM
>sampler testing this very thing for anyone interested.

And all this testing is worthwhile, yet not definitive. Time after time in the last 50 years in audio, someone has come up with a "definitive" test for something and discarded the audible evidence right in front of them. Later, someone a bit smarter figures out how to test for what they heard and says "oh yeah, here's what you heard".

It's like the folks who say there is no difference in CD recording media or writing speeds. I heard SSC say on this very forum that media didn't matter, but you shouldn't write audio CD's at 44X.

Well, why not? they checksum perfectly! But they sound like crap.

So, while we need (desperately) objective standards and measurements in audio, I have to say that someone who convinces themselves they did not hear something that they know they did hear, is almost as silly as someone who believes in every single goofy myth on Harmony Central.

Hearing things that we cannot measure is how both audio and the science of measurement progress.

>This is a long debated issue that so far, as a Nuendo user, and former Paris
>user, I can't find a reason why Samplitude would sound any better - either
>technical or audible, and I've tested both ways.

I don't know that Sequoia sounds any better or different than Nuendo. Haven't spent time with it. I like Sequoia because the editing just rocks, and you can master in the same app as you track and mix. Also, it's reputation in classical recording is sterling

and there is no harder test than that.

>I think the truth of the
>matter is sound is 50% perception. Some think one DAW will sound better,
>and it does. Put a Samplitude/Sequoia wrapper on Cubase SX and I bet 8
out
>of 10 listeners will think it sounds better. Some users claimed v2 sounded
>better than 1, but they were the same audio engine - just a different look.

Like Paris Pro huh?

You are right of course, but like the doctor who listens to an ache that everyone else has dismissed, and looks closer only to discover a new disease and save a life, we grow when we hear something that should not be there, or miss something that should.

There will come a point when DAW manufacturers stop making silly errors like the PT mix buss, and then things will sound mostly the same, but hey, look at the hardware vs. plugin debate! Hardware versions of the same product often sound better.

There is plenty of room for progress in digital audio.

take care

tracking her new project with the SE Gemini !

Greetings,

Tony Benson has been kind enough to offer his web-site
for hosting some cool PARIS and Audio files etc...

As many of you know - I am always looking for cool and Unique
sounding products that are in the Spirit of this PARIS Community.

I believe the SE Mic company has some really Great Mics that deserve
a listen.

<http://www.seelectronics.com/whatsnew.html>

Tony will post some MP3 and Wav files that were Recorded By
Roger Nichols for NARAS
(National Academy of Recording Arts and Science)
<http://www.rogernichols.com/>

Here is the Challenge - there are 5 mics in the Shoot out:
TELEFUNKEN U47
SOUNDELUX U95 (AKG C12)
SE GEMINI
SE 5600A
SE ICIS

These are all Tube Mics - The Telefunken and Soundelux
cost Thousands \$\$\$ More !!

Listen to the Samples - then Properly identify the Mics in order.

Anyone that can Properly identify these Mics will Win -

SE Microphone Deluxe Windscreen \$ 59 Value

<http://www.seelectronics.com/popscreen.html>

Planet Waves Mic Cable \$69 Value

<http://www.planet-waves.com/Pcablesdetails.aspx?ID=2>

Files are posted @

www.mercysakes.com

Good Luck !!

Please send your entry to:

That's why I don't even try. ;-) I have to say, I also tried contacting Synthax (RME's US support) and got no response there either. RME's forum

however, was much more useful since Matthias Carlsen himself visits there most everyday. In some ways it's a falling down of the companies, in others, it's just simple economics - small software company - no budget for support personnel. Digi built their company on expensive hardware, upgrade plans, and pricey support plans, but it worked. .

True - of course there is a reason why the demo sounded bad - possibly just bad material. There was a Paris demo that didn't sound good as well, or at least didn't impress me. You are right - it isn't that hard. I just don't understand why mp3 loops are considered satisfactory for demos. I think some of it has to do with just how large the content would be for a full-fledged demo to include with the product - should be no big deal for tradeshow, but instead they end up with the low rent demos that come with the app instead.

True. The point was that sometimes we "think" we hear something better,
only to blind A/B it to another source and realize we pick A and B equally.
The same happened with me an Samplitude - I heard the hype, opened the app
and thought that somehow it seemed to sound better on even a single stereo
file. I A/B'd it and realized it was just
psycho-acoustic-hyper-expectationalism (aka PAHE ;-)

If I were recording and editing classical, Sequoia would be at the top of my
list simply for editing. No need for VSTi's in that market, so editing
would be key. There is no doubt Samplitude and Sequoia are stellar apps for
audio (mediocre for midi/production though, and poor for composing, which is
what I do).

I once found some audio anomalies in Paris that I have screen shots for. Another user raised questions about the validity of those results (perhaps system/power related?), but I my procedure was valid, and tested multiple times. They showed odd gain behavior at lower levels that technically would have been bad news for a newer digital product (unable to pass a single audio file transparently), but this was after it was on its' way down, and we all loved the sound, so no one really cared.

Absolutely. I am hoping 64-bit OSs, apps, and mix engines reveal a higher quality we assumed we were missing, but have yet to compare audibly (and hopefully some performance boost at the same time - long shot I suppose). I'm all for improvement and never saying my DAW of choice is the be-all, end-all. That would be shortsighted. It is in fact all about the music, not the gear.

Happy Thanksgiving!

>I think you're right. I just listened with fresh ears. It's barely noticable, but it's noticable nonetheless. What happens is that Nero upsamples the .wma with a bunch of empty zeroes to create the audio CD. Then the encoding feature grabs those and downsamples them again. Sounds like the codec is throwing out more than just the empty zeroes (sigh).

16 bits of resolution... it's just that some of the bits are actually wrong.

;o)

So what happens is, you had the WMA files (which have some bits wrong) which is then converted to 16/44.1 CD audio (albeit with some bits wrong). Your MP3 conversion software then converts the audio (complete with wrong bits) into MP3, which then creates an MP3, with full 16 bit resolution, but with some of the bits wrong once again, hence it no longer matches even the output of the WMA, which was, in itself, wrong...

You'll possibly be lucky to a degree, in that it's quite possible that the conversions will make similar mistakes to each other, hence your cumulative error will possibly be less than double the original errors.

Best to start from wavs though.

Cheers,
Kim.
