>www.adkproaudio.com

>chrisl@adkproaudio.comHi Paul,

There are already quite a few computer based and even non computer based system that can do 24 tracks at that price point that work quite well.

With pretty much every one having a computer in either a desktop or laptop form that can already record 24 tracks and then some its gonna be a tough sell.

Most laptops and desktops have been able to record 24+ tracks for 5 years now. Computers in general have become far more reliable than in the past.

Well laptops can be a bit more hit or miss with that but thats mainly because of how fast things are changing on the laptop.

Right now there are already computer options that can give 24 channels of analog that will run in the 2k 2.5k range assuming some one already owns a computer.

If they can get it in the 2k or under range though I think they will appeal to less of a niche market. Not like the Live sound recording market is a big niche anyways. :)

>>Easiest method is to export a stereo bounce (minus the track you are
goint to be processing), then export your target track. Bring both
tracks into Melodyne. then you can hear your guide/background track at
the same time you are working on your target track. Tune target track,
export, import back to paris.

>Hey guys, I've got a friend (not me:) who is setting up a room to cut vocals
in his home. He is doing work which is consistently being released. Currently,
he has a Protools setup with MBox...great mic's, decent pre's, but is looking
for an 8 channel mixer (maybe smaller?) to address monitor levels within
the room. He only cuts vocals, so channels can be minimized.

Any suggestions?

TyroneGood points. I found that I want all the "tuning" done first anyway, so I
would insert MDyne as the first plug each time, and
while you still have to be mindful that the audio is "loading up" and "playing
from" MDyne, at least the timing and other plugin issues are taken care of.

Ted

you didnt' specificy budget, or tone centered. I just bought myself such =
mixer for keys/sequence/writing, and I expect to have it in a week or so =
in my hands, if he wants an eval and can wait. Here's what I ordered, at =
a blow out digital mixer price of \$300.=20

<http://www.rolandus.com/products/productdetails.aspx?ObjectI d=3D860&Paren=tId=3D114>

Yes, it's \$300. Feature set is crazy at \$300. It probably has (by =
professional standards)crap preamps in it, but I'm using it mostly to =
monitor and input keyboards anyway, so my needs may differ a little from =
his. Most negative I could find about it was that the mixer is a bit =
noisy. Having the unit analyze and correct the room is a biggie for my =
laptop rig, even if it's half baked it beats not at all. throw in COSM =
and mid band sweep+ Q capability per channel and I was in. If your dude =
has his pre/mic combo already wrapped up into PT, this might be a real =
sweet entry ticket for him.

-----=_NextPart_000_0020_01C97A7C.0DA1A300--Hey AA, how are you man? Thanks for the
heads up. Price is no biggie. This
looks pretty cool...especially sweet @ that price point. You mentioned that
it is a bit noisy. I'm assuming you know that from past experience...how
much so? I will pass this along to him.

How's Wayman making out? You still doing work with him? Glad to be in touch
man.

Tyrone
