<http://www.jlcooper.com/pages/synchronizers.html>It's for live not studio use, so I kinda need it to
not want a computer by
its side.

Ideally I want a box which you can feed SMPTE into and get Midi Clock out
the other side. Now I realise that there are tempo issues with this, because
SMPTE is real time, whereas MIDI Clock is in musical divisions, hence the
box would need to know the tempo...

....but I'm hoping. ;o)

Smart FSK may do it, but the trick is getting something that will sync in
the space of 1/100th of a second rather than 1 second... otherwise I'll
miss the first second of the loop on the sampler.

Cheers,
Kim.

Yup. Probably the best time I've seen consistently is about 2 seconds to be solid. I always gave 5 pre roll to settle the lock in.

Mmm, it's not going to work is it? DOH!

Sorry bro... probably not. I know you want to avoid a computer, so stuff like Live and Acid is out. Next thing would be a hardware sequencer, but I'm not sure anyone even makes those anymore? I'm not real clear what you're after, but would a foot controller (like say a Roland FC-200) that shoots midi notes to a sampler do it?

.....

Further info: I have a PPS-1 and a PPS-2... nope, never seen either lock to any TC that quick. Of course, with no real readout on the unit itself I couldn't say it was the PC or the JLC units definitively. As I recall there is a lock light... but I haven't blown the dust off either of them in years since I use software sequencing.

Suprisingly, IIRC IME the Alesis MMT-8 was awfully quick to lock, however it is FSK and not Smart FSK, meaning the SMPTE loop scenario would never work.

Are you selling or trading for your PC90 core32 ?

I have one left input Paris card I also have the AKG microphone I posted before.

>This stat distorts things a bit, because after WW II the US Navy decided that
the aircraft carrier was the primary weapon to have in the closet. The Russians
then, and the Chinese now, have decided that the submarine is the crucial
link, and the US has nowhere near 90% of the subs in the world. This makes
sense because the sub navies meet a largely defensive/deterrent goal while
carrier navies are about projecting power overseas. Since the US has zero
fear of anyone sailing over here and invading the continental US, we built
a navy that can be used to attack, or at least threaten, other countries.
All of which is to say that 80/90/100 percent of carriers does not equal

a similar percentage of naval power. Oh, one more thing. In war games the subs almost always sink the carriers, so the carrier navy is really only useful against countries without powerful sub navies. So if Iran were smart they'd be buying subs instead of trying to acquire a nuke.

Second, your argument is correct, to an extent. However, if the War Minister of Lichtenstein does something stupid, say, manipulates his country into war with known faulty intelligence, it doesn't matter. When the US does that a few hundred thousand people, almost all of them civilians, wind up dead. The dead people are no less dead because we possess roughly average wisdom. Which means we need to wise up.

I also heard the sun had something to do with the weather. So Paris gives you a woody? Go back to Paris. Cubase is kicking total ass for me so do what works for you. Life is too short to whine over DAWs. I think I have to nominate "Cool Hand Luke" as one of the top 10 greatest flicks of all time...superlative writing, exceptional acting on everyone's part, some of the best music ever put to film, no special effects - just great a great plot played out by great actors...

"Takin it down here, boss!" I have been affecting change in my own way to some degree, and having fun while doing it. It takes almost \$50 to fill my jap car, and that is NUTS. My bike, on the other hand will run over a 100 miles on about \$7. Which one do you think I drive daily when weather permits?

 nuts. There are only 2 of us to cover 280 acres and when I got back he went
 out sick for a few days, and is going on vacation all next week.
 Jeeezzzz.....
 Yesterday was an 11 hour day, then I came home and had band rehearsals :O
 I gotta catch up w/you soon though, I still have to work out finals on all
 our horse trading last month :)
