www.adkproaudio.com

chrisl@adkproaudio.com CL is spot on here however, I recommend going the recovery route first.

Each time you boot to that drive (even if to CD with that drive as primary HD), that drive gets some read/write action. Remove the suspect HD and install it in as anything other than C or Boot drive in another machine.

Ontrack makes a great recovery package. I've successfully lifted everything off a fully re-formatted drive using Easy Recovery Professional. If ERP can't find anything, move directly to CL's final step. Data recovery company will want a minimum of bucks with no guarantee of *any* recovery and with audi

o projects, we all know that one or two little pieces of data saying bye-bye, you number one will go directly to file 13.

Here's a little more info on the malf you have:
http://www.kellys-korner-xp.com/xp_haldll_missing.htm

Me,. too.

pabl If his HAL.DLL is missing or corrupted, he's more screwed than to just go to
safe mode, unfortunately. Ludwig and Wilson have it pretty well covered
IMO - in fact, I'd recommend you guys to take notes on this so when it
happens to you, you can have some info handy to try immediately. Print it,
put it in a file unless you have another computer with access.

>I should add here guys that the purpose for installing the suspect drive on
another machine as a non-bootable is so that the suspect drive may be
examined for recovery without write ops anywhere on the drive until you
choose to perform them.

During any recovery op, try least invasive measures first... it takes
t....i....m....e. For example, don't run any "disc repair" or MBR fixes or
virus detection/removal. Let the recovery software do it's thing. It may
want to read the drive for a day. Then get tough if it seems worth the
risks.

www.adkproaudio.com <http://www.adkproaudio.com/>

(859) 635-5762 There is, but you have to take over/blow away ownership, and that could make it not work on it's own anymore. It's been a while, but I had to do this once in a similar situation. As I recall :

Create an account on another computer with the same name/password.

Give that account admin privs on the machine.

Use that account log in to the machine.

Can you see the windows directory now?

I'm not 100% on this, and the SID might not allow it since that won't be the same but it seems like on XP pre SP1 I was able to pull it off that way. Things may have changed since then.

have you tried <http://support.microsoft.com> for researching answers?

Johnthanks guys, I ended up buying this one. hope it works ;-)

<http://tinyurl.com/5plwxv>Definitely YES.

>

> Comments? Thoughts?

>xxclone is the one I had been using to copy my drive to make a backup. It's not even a system drive but xxclone works great ! 130gb takes about 2 hours.

johnHI Jim,

If you want a full featured backup program that will work on current hardware and OS's I would highly recommend Paragon Softwares Hard Disk Manager Suite or Drive Backup Personal or Pro editions..

Any one of these programs have fast and reliable backup and recover options. The

recover options are the best I've seen for a backup

program. They even are working on a version to be fully functional with
OSX and boot camp setups. Very cool.

for 24 bit capability, use the MAudio C02 - I have two of these. They work
greatsix of us still using it in Sydney Australia and every week there is PARIS
recorded country hit in the Country Top 30.

>Hey Ron - nice to have you aboard! I'll add you to The List.

I've started a couple of sites, containing both info gleaned from previous FAQ sites and new material, to collect, edit and update PARIS lore:

PARIS blog: <http://ensoniqparis.blogspot.com/>

PARIS Wiki: <http://www.kerrygalloway.com/WikiPARIS/wikka.php?wakka=HomePage>

They're sparse right now. That's partly because I've been consumed with projects lately, but in larger part because I don't have a PARIS rig right now to verify tips/techniques/terminology/bugs etc (I don't want to put too much flaky "relying on memory and notes" info up there). I don't expect either site will fully hit their stride until I set my PARIS studio up in January '09, but the rig is coming within days and then I hope to buckle down with an update or two. But feel free to throw in what you like at the Wiki, it's totally user-modifiable.
