I am also unsure about tweeter at ear level thing,

I dunno what "big" studio I ever worked at where this was the case.

On an old neve that would not even be possible. Look at Ethan Johns sitting in front of his dad's console in the new tape op. There is a "null" spot in your room I think you want the middle of your woofer between 46 and 49 percent of the height of your room. Better check John Sayer, cause I may be off by a few percent.

There is also a front to back null as well. This is very obvious in my room when working on R&B sampled kick stuff. If I lean back about 1 foot the bass just disappears, then it comes back in another few inches!

I have gone almost too dead, I think I may cover some of my traps in plywood, or peg board but they must be mounted tightly to the wall to work as far as I know

>Hi, all.

My buddy Swen abd I have both succesfully clocked our Paris rigs to Lucid clocks. Yay!

I have not yet tried to route digital signals to external FX boxes, but Swen has, with no luck. He says that when he patches an FX send to a digital output in the Paris patchbay, there's no signal on the mixer aux channel. The same basic patch works with an analog output engaged, just not the digital.

His Kurzweil KSP8 shows lock to the Lucid, and Paris locks perfectly as well.

Any knowledge?

JimmySwen has a couple sticky C-16 mute buttons. They work, but they're sticky. I think a very small amount of splashed beer may be the culprit. It's a bizarre tale involving a beer that was dropped onto the floor 4-6 feet away from the mixing area. The beer landed upright, but shot a stream of beer up into the air, and a few drops landed on the mute buttons on channels 15 & 16.

Any way to easily clean? Spray a little contact cleaner in the

>Richard,

I've bought a used Mac G4 to use with Paris that has more horsepower than my previous Mac G3. Now I have to make a decision about displays. The G4 has two video cards so it can support two monitors. But one of the video cards provides a DVI digital connection that, according to Apple, works better with the newest Apple displays, such as their 20-inch \$800 display. My local Apple salesman claims therefore that the Apple display with the DVI connection will be superior in quality to any typical PC-world display with a VGA connection.

My question: Which is better for monitoring Paris--two 17" or 19" displays (costing \$1,000 or so together) of decent quality or one 20" display (costing \$800) of marginally better quality?

Many thanks,
Richard Faylor

RichardFaylor@aol.com
(208) 343-7681 This is better!
https://www.bestbuyplasma.com/Plasma/Product.asp_X_sku_Y_LT3_2HV

I just got one and all I can say is WOW! Especially with the DVI!

Then I have an 18" flat panel over to the side for displaying plug-ins
though really not required.

cts that you

would even consider do this on.

I miss tape... the smell, the sound, and the limitations that made musicians work so much harder to get *the take*. In the cut and paste world we live in, much of our art is disappearing.

Respect back at ya!

>Also, do you like the sound of bass hitting tape?

of analog tape.

That is when you intentionally push tape past its normal limits to get a particular sound.

That is what I use my 2 tracks for. I will intentionally drive drums or bass deep into tape at +3 or more to get the saturation and compression sound that you can only seem to get from real tape. (I have not tried the new Portico yet.)

This is using the analog recorder just as you would any effect. You try it and listen back and make adjustments.

Paris can get close, but I like real tape, particularly on drums and bass when I am looking for a more aggressive sound.

to break up from the lack of headroom in the electronics before the tape effect kicks in. If I had one I would give it a try and see if I liked it.

Obviously anyone who has dealt with plugin latency issues in Paris can easily deal with the tape delay.

Let us know how it turns out if you try it.

>>ok... so I will admit it. I have never been able to get my head around the way paris runs automation, so I usually try and work without it....

but, well, now... I need it.

here are a few questions...

why is it that I can input automation by making moves with the mouse, but not with the c16 ? I hit the "auto/marker" button....and armed the tracks.... but it didnt take from the fader moves on the c16.....

also... why are my "pencil" buttons greyed out in the automation window?
if I could figure out how to access them, I might just draw it in....

if someone could help.. I would be mucho mucho grateful...

I didnt seem to find the answers to either of these in the FAQ's.....

Hi,
I use waves 4.05 with DirectX 9c on XP.
I guess 5 will work too but it updated mostly for mac I think...
Regards,
DimitriosI usually do a small move with the mouse then draw the rest in.
COuld it be that you need to select the volume in the automation editor.

Run a 75 ohm coax from the spdif output from the CDL-313 into the s/pdif
input of the Digipatch and run a 75 ohm coax from the s/pdif input of the
Digipatch to the s/pdif output of the CDL-313 and you're good to go.

Also, I would like to request that you fill a paper sack with dog shit, saturate it with lighter fluid, place it on their front porch, light it, ring the doorbell, run to your car, jump in and drive away. If you will do this I will buy you dinner if you ever want to come up to Colorado.

>I just wanted to take the time to say thanks to my buddies here in "Paris Land".

This group provides never-ending assistance. I was recently asking questions about gear...specifically microphones in this instance. I had a number of

people offer their thoughts. My weekend was given an additional boost when I received a call from none other than the "Deejmeister" himself. It was really cool speaking with him and he provided me files to listen to which proved enormously helpful with making my final decision.

In addition to DeeJ, I've spoken with more than a few Parasites over the years including Aaron Allen, Nappy, Lamont, Morgan (East Coast), Chris Ludwig (built my first Paris rig) and Gene, whom I've known for quite some time.

The knowledge and information shared by this groups proves quite useful in my day to day Paris "grind" as well as other audio endeavors.

Just wanted to say thanks to all....much appreciated!

Tyronel need to be able to simultaneously interface with at least 3 x pair of s/pdif I/O along with 8 x analog I/O and at least 56 ADAT I/O to achieve studio bliss. If I don't have this I will die. Madi appears to be solely ADAT so I would have to do an either/or with the last lightpipe I/O using a format converter and an external AD/DA.....resulting in my demise. I really would like to keep exactly the setup I have and be able to add just another 8 analog I/O plus another s/pdif and lightpipe interface. Much joy would ensue.....but alas.....;oP

So now I'm wondering how I might kludge something together that would bypass this obviously flawed thinking that would, for no reason that I can discern other than plain 'ol meanness, attempt to thwart my lust for doing wierd shit with a DAW.

Hide and watch. I'll figure out something.

;o)

But there's got to be some translation going on, not just a cable changing
sides from one side to the other....

> I have two EDS1000's and 2 MEC's. Each MEC is loaded with a pair of the 8IN
analog/digi cards.

When i patch everything in the PB window, the Submix A (card 1) comes up
just fine, inputs routing to the mixer, etc...but when i do it the exact
same way for the second submix, i get no signal into the mixer.

Recap: it looks like the system is seeing the EDS1000 card, the MEC, the
Input modules, and letting me route all the way through, but i get no sound.
I even tried putting an ADAT card in and routing that, still no juice to
the mixer.

PS: DJ, I want to talk to you when you get a minute, it's been awhile. I
got a new toy!!! (PS: i'm the guy you helped out in santa monica with all
my wacky mobo issues, again, thanks!)Hi David,

Do you have a 75ohm BNC cable running from the MEC BNC clock out that is
hooked up to Card A to the MEC BNC clock in of the one that is on card B?

>HI DJ,
1 x RME HDSP MADI PCI
<http://www.rme-audio.com/english/madi/hdspmadi.htm>
1 x ADI-648
<http://www.rme-audio.com/english/madi/adi648.htm>

1x RME HDSP AES-32 PCI Card
<http://www.synthax.com/rmeaes-32.html>

This would give you what you want with a few extra channels.
This will bring you down to a 2 card setup with allot more routing ease
sense your not trying to route and clock between 3 or more cards.

Don't for get that you can use up to 3 MADI cards in a system. I've a
bunch of machines with 2 for 128 channels and they work perfect.

(The AES card is compatible with the Madi card so it will add I/O to the
MADI driver. Add this to the MADI card and you will have 16 AES/SPDIF
stereo pairs in addition to the 64 I/O of the MADI card. The card will
be shipping in a month or so.)

If you don't want to wait for the AES card then use the ADI-4 DD this
will take one of the ADAT I/O of the ADI-648 and turn it into 4 stereo
pair of AES/SPDIF.

The 8 channels of AD/DA could be Paris. At this point I think this would
be a better use for Paris. Use it for AD/DA and effects processing.

Hi,
Try this if it will help...
Go to Paris.cfg and put a line (if it is not there already)
MasterOutputCard=0

Try with 0 and 1

Also Adat cards should be always after In cards inside mecs according to my tests and many user setups...

Regards,

Dimitrios

>my wacky mobo issues, again, thanks!)Hi,

Here is my setup proposition something that I use and I am in "heaven" with that configuration.

Well, if you buy secondhand three Pulsar Creamware cards with classic configuration you get 1 stereo spdif in/out 16 ADAT i/o and two analog 24 bit (up to 96khz) in out plus midi in out.

So for three cards you get 48 Adat in/outs 3 spdif stereo in/outs and 6 analog in/outs.

Pretty close to what you want.

This setup when configured right is EXTREMELY reliable !

Plus you get the scope environnement with cosoles digital effects that run from Pulsar

dsps with great Pulsar plugins like VINCO (1176 clone) PSY-Q (BBE enhancer type) and the most incredible, could I say best, synthesizers on any platform, period.

This setup along with Paris is truly amazing.

Using a freeware (there are plenty of those) called millidelay I can make the routing from Paris to scope back to Paris using just nudge slip in Paris! will check this...thanks for the heads up.

>You might consider an expanded MOTU 2408mk3 system. This would give you 96
channels of simultaneous input and output at sample rates up to 96kHz. Up
to 96 ch. of Adat and Tdif I/O at 96k, 32 ch analog I/O 24bit 96k, 4 stereo
SPDIF in and 8 stereo SPDIF out, SMPTE and word clock.

It might be a cleaner set up.

Just a thought:)

Also you have to click the button to select the mode to begin drawing.
It is in the manual and you can get the pdf if you need it.

>I'm going back to win98 after way too many crashes/wasted time with xp
and paris. Is this true regarding drive size in win98?
Thanks,
John

The usable size limit for a FAT32 partition in Windows 98/Me/XP is 128 gigabytes (137 billion bytes). The reason for this limit is that FAT32 disk tools such as Scandisk and Defrag cannot work with drives that have more than 4.1 million total clusters and the maximum supported cluster size is 32K.

Your hardware, especially the BIOS may also impose limits on the size of the hard drive that it will recognize. Check with the computer/motherboard manufacturer for this information.

But if your hardware will support drives larger than 128 gb they will have to be partitioned so that no partition is larger than 128 gb in order to be usable under Windows 98.

Good luck

Ron Martell Duncan B.C. Canada

--

Microsoft MVPHi,
From what I read in this forum EDS cards are 5V .

Do they use also the 3.3V ?

Anyone knows how many watts consumes each EDS card ?

That is for choosing the best power supply it is not the total wattage they output but how many amperes they use for 5V ?

Right ?

Anyone digged in this before ?

Regards,

DimitriosTry this:

1. Turn on Apogee BB first. Be sure it is fully powered up and all lights have cycled through before you.....
2. Turn on MECs
3. Now boot your computer
4. Now launch Paris.

If MEC 2 still doesn't recognize the cards, go to your project window and switch the project settings from Word Clock to Internal, then back again to WC..

If that doesn't work, open your Global Master window, switch both cards to *virtual* submixes, assign submix 2 to card A and submix 1 to card B. If works, you might want to save your project this way and leave it alone.....but if you're like me and demand a certain discipline from your DAW, you will then switch the cards back to the original settings and see if they work.

of the music, I would say - just for the helluvit, start with:

- a.) The SP-87 at about a 45 degree angle back from the bridge,
and...
- b.) One of the KM-184's or C460B's aimed straight-on at the
12th fret.

Try the Great River or the Forsell on the "12th fret" mic, and

you have an Avalon 737, dontcha? Use that on one the SP-87 with just a teensy bit of compression & lo-end rolloff.

It ain't gonna suck, I'll tell you that much!

why. Deej, I've look for some old post I thought I saved from when you went through this, but I can't find them, so, please forgive, but I need your help. I finally installed the RME 9652 and Cubase SX3. I can't get them to sync up at all. Cubase just sits there when I press play on Paris (I have the adat sync hooked up) I have tried everything I can think of, changing settings in the 9652 control panel to recieve adat sync, set cubase to recieve sync, etc. I'm just talking transport sync so far...havn't even tried audio yet. I previously had Cubase 1.06 sync'd up perfectly (sample accurate) with Paris using a Frontier Dakota.
etc(but it's late so I may be missing something) Do you have any tips????
Rod I'm sure some of you guys are hip to this, but I thought I would put this out there.

Dear Tyrone.

These are absolutely just amazingly wonderful news !!!

In my dreams I always have this Grammy dream nomination/award thing ...

I am very happy you got there first !!

I wholeheartly hope that your song will get finally at least one Grammy award.

My prayers are with you.

Regards,

Dimitrios Yes, but not as a compressor, heheh.....

I usually get a mix I dig, then I'll spank the global fader with gain out of the compressor make up gain. Fattens it up every time. The method is covered in the Paris video I cut with BT I believe. Thanks for the trick, Brian! No limit is great, but for what I want there it's not where I'm going, personally.

Now then, no limit on a bass/floor tom/kick track... that's another thang...

>
>;o)

That would be a new take on the term "Eat The Mic!"

After I build one of these for 15 bucks, then I'll have to build the 200K room to record in, so it sounds good;)

If anyone builds and records with one, let us know what you think of it.
In time I'll be building one to go with my EarthWorks mics.

Thanks
James

I know what your asking.....Paris on XP has always worked with using the
adat 9 pin for syncing with other audio cards, at least for me, just not
for syncing with an actual adat. For that I still have to use ME.

>Thanks guys, I am quite pleased about this. Actually, this is not my first time being involved with a Grammy nominated project. I worked with legendary folk singer Pete Seeger on his 1996 record entitled "Pete", which won a Grammy for "Best Traditional Folk Album 1997". I provided background vocals on two songs on the record. Oddly enough, I just ordered the Grammy certificate for that project last week....kind of eire.

In this instance, I also provided the background vocals for "All I Want...". I'm keeping my fingers crossed as allot can happen between now and the actual show.

TyroneI tend to compress on the way in to address a number of points...which have already been stated.

1. I like the sound of hardware devices
2. Controlling peaks
3. Depending on the song, I use it as a tool for the singer to work against.

Obviously, my usage of compression can change drastically depending on the song, but by and large, I tend to use some amount of compression going in.

TyroneYou do mostly R&B? correct?

Tyrone,

home/studio in Woodstock, N.Y. (I also met George Wein there the same day).

Background singing on a Grammy album is a great honor, but being a writer is a much bigger honor, and a very small group. Congrats again. Gene. I haven't used one, and would like to, but I have done hundreds of classical recordings with spaced omni's (usually B&K/DPA 4006's) and I can tell you that the disc is not needed to get great recordings.

What it will give you is increased separation especially at high frequencies. This may or may not be an advantage depending on what you are looking to achieve. I can tell you that the separation when using spaced omni's on an orchestra (without a disc) is quite realistic and has always met with even the conductor's approval.

I did several classical harp CD's where we recorded the harp from about 4 feet from the strings (facing the strings) and used spaced omnis (about 6" apart like Jecklin suggests) and thick pads all over the floor, in a room with terrific acoustics, and the harp was totally realistic and when played back in speakers sounded like it was in the room with you.

I always wanted to try this technique with a singer/acoustic guitar.

I did it one in mono, but never with a stereo spaced pair like with the harpist.

I would like to try the disc, but I am concerned about killing some of the off-axis room sound and reverb. Also, spaced pair recordings are totally mono compatible, you just turn off one channel and pan the other to center, where the disc is not going to like mono at all.

Still it would be fun to try.

DC

>JamesI've got a wierd thing happening here. I've had 3 drives today report that
they only 20 gig drives when they were actually 40 or 80 gig. This all happened
when I put them in my Cubase comp(I have matching removable trays in both
comps)Both comps run win xp.

(my cubase comp has a DVD burner...I was attempting to archive some files,
these are all removable audio drives, not system drives, and are all formatted
fat 32.)

When I put it back in the Paris comp, it still reports the wrong size and
some of the files say they're corrupt.

When I look at the disks under the management window it show's there correct
size, but looks like they got repartitioned and there's a large unallocated
partition there.

So far I haven't lost anything (I don't think) as I am pretty good about backing
up. But I don't want to stick any drives in the Cubase comp.

New changes to the comp are as follows. (all last night or today)

1.flashed the bios to the most recent (gigabyte K8V Triton)

2.installed and updated RME 9652 (after uninstalling Dakota Frontier)

3.installed and updated Cubase SX 3 (retail)

4. That's about it. While I was updating the drivers via the net
(temporary Lan connection) I inadvertantly had automatic updates turned on
and Windows updated a bunch of "Hotfix" security updates. (this comp is not
normally on the net and I have been running XP Home SP1 on it)

5. Last night I got a "Windows has recovered from a serious error" during
the beggining of installing cubase, so I re-ghosted to t

I saw that some of you are using M-audio digipatch.

....well, it's good but take look at this stuff:

DMX 12 <http://www.friend-chip.de/dmx12.htm>
(12 x 12 crosspoint switch matrix, 24bit ADAT and SPDIF)
....about 675\$

DMX 16 <http://www.friend-chip.de/dmx16.htm>
(16 x 16 crosspoint switch matrix, MULTI Digital Format - 4 modules!!)
....about 489\$ mainframe + about 200\$ for modules (ADAT,Spdif,AES, format
conversion...)

Excelent stuff. Isn't it?

Greetings,

SuadThat's awesome!

Congats!!!!

> Regards,
> DimitriosI periodically get or buy samples of new-production tubes just to see
what they are like. The Telefunken clones are good, but not 100%
and the Mullard reissue is kinda close.

Now, I got one of these:

<http://www.tubedepot.com/eh-12ax7.html>

and tried it in the driver stage of the THD Univalve and it sounded better than anything I own. My NOS box includes real Mullards, real Telefunken's, RCA, Sylvania, National, you name it. This tube beat them all in that position on that amp. Remember, the Telefunken ECC83 (12AX7) is the holy grail and goes for 145.00 now.

This new EH is exceptionally nice sounding. I want to try it out in my Summit mic pre, and will let you know. In the meantime, if you are interested, get one (hey it's like 8 bucks!) and let me know how

you like it.

I am very impressed so far.

DC

(no commercial interest in this product, and not a huge EH fan in general)I don't know what it is... a few of our drives freaked out as soon as XP tried to mount them... others were fine. I wouldn't risk it personally... almost lost a whole project last year! Both the data and back-up were both FAT32. When it didn't read the one drive, I stuck in the other and it did the same thing. Took the drives into the next room (ME at the time) and it saw the info. Got it off toot-sweet!!

David.

"AA" <no@spam.net> wrote in message news:43618a52@linux...

LOS ANGELES (AP) - George Takei, best known for his role as Mr. Sulu =
in "Star

Trek," came out as homosexual in the current issue of a magazine =
covering

the Los Angeles gay and lesbian community. Takei told The Associated =
Press

on Thursday that his new onstage role as psychologist Martin Dysart in =
"Equus,"

helped inspire him to publicly discuss his sexuality.

Takei described the character as a "very contained but turbulently =
frustrated

man." The play opened Wednesday at the David Henry Hwang Theater in =
Los Angeles,

the same day that Frontiers magazine featured a story on Takei's =
coming out.

The current social and political climate also motivated Takei's =
disclosure,

he said.

"The world has changed from when I was a young teen feeling ashamed =
for being

gay," he said. "The issue of gay marriage is now a political issue. =
That

would have been unthinkable when I was young."

The 68-year-old actor said he and his partner, Brad Altman, have been =
together

for 18 years.

Takei, a Japanese-American who lived in a U.S. internment camp from =
age 4

to 8, said he grew up feeling ashamed of his ethnicity and sexuality. =
He

likened prejudice against gays to racial segregation.

"It's against basic decency and what American values stand for," he =
said.

Takei joined the "Star Trek" cast in 1973 as Hikaru Sulu, a character =
he

played for three seasons on television and in six subsequent films. He =

received

a star on the Hollywood Walk of Fame in 1986.

A community activist, Takei ran for the Los Angeles City Council in =
1973.

He serves on the advisory committee of the California Civil Liberties =
Public

Education Program and is chairman of East West Players, the theater =
company

producing "Equus."=20

-----=_NextPart_000_001D_01C5DB52.1310DA80--You can probably check BT and I off the list.
He had one in his studio (when
I was there shooting the video) on a second rig that he said worked, but he
didn't need it and was going to sell it.... maybe for him a 'throughput
issue' would mean it didn't blaze a 2 GB/sec flame across the wire, LOL..
but he didn't mention anything like that to me - and being the dude he is,
I'd tend to think he would've mentioned it to me as a perspective buyer.

"Star
Trek," came out as homosexual in the current issue of a =

magazine covering
the Los Angeles gay and lesbian community. =
Takei=20
told The Associated Press
on Thursday that his new onstage =
role as=20
psychologist Martin Dysart in "Equus,"
helped inspire him to =
publicly=20
discuss his sexuality.
Takei described the character as a =

"very=20
 contained but turbulently frustrated
man." The play opened =
 Wednesday=20
 at the David Henry Hwang Theater in Los Angeles,
the same day =
 that=20
 Frontiers magazine featured a story on Takei's coming =
 out.
The=20
 current social and political climate also motivated Takei's=20
 disclosure,
he said.
"The world has changed from when I =
 was a=20
 young teen feeling ashamed for being
gay," he said. "The =
 issue of gay=20
 marriage is now a political issue. That
would have been =
 unthinkable=20
 when I was young."
The 68-year-old actor said he and his =
 partner,=20
 Brad Altman, have been together
for 18 years.
Takei, a=20
 Japanese-American who lived in a U.S. internment camp from age =
 4
to=20
 8, said he grew up feeling ashamed of his ethnicity and =
 sexuality.=20
 He
likened prejudice against gays to racial =
 segregation.
"It's=20
 against basic decency and what American values stand for," he=20
 said.
Takei joined the "Star Trek" cast in 1973 as Hikaru =
 Sulu, a=20
 character he
played for three seasons on television and in =
 six=20
 subsequent films. He received
a star on the Hollywood Walk of =
 Fame in=20

Had a project that called for tenor sax, vocals
and a little egg shakin'.

Used 'em on everything through the Precision 8
with really great results.

The best words to describe them are natural and not hyped.
Made the sax sound just like the sax. Had to be fairly close
to remove the room coming off the backside of the figure 8.
Vocals didn't need compression. I was singing and watching
levels so that made this possible. They did seem slightly
compressed sounding though. Even when the wave got
squared off in Paris it didn't gack or even sound clipped.
I rerecorded those spots because they looked bad...
Odd but kinda cool. =20

Vocals in the mix need lots of high end. Not a problem either.
It was a disco thing with that sizzly sound that only a condensor
should get. What I found was that these things took Paris' eq=20
sweetly. The esses didn't go over the edge and tone was smooth
as silk. I did use La2a's across them at mixdown though. The eggs
recorded nicely and again sounded natural. One on each side of the mic. =
=20

These are the first ribbons I've used except for some Beyer M160s way =
back.

These are floating my boat right now. I think they will rock on brass =
and=20

crunch guitar. I'll find out about that when a 7 horn band comes in =
soon.

They needed a lot of gain. I was afraid to get any closer than about 4" =
from them.

Delicate little buggers you know. Of course I used a popper stopper for =
safety

which darkens the sound a bit too.=20

At \$700 or so for the matched pair.I think this is quite a bargain =
compared to=20

the R121s etc. The Lundahls are supposed to give them more clarity =
across the board.

Natural is what I call them. Not a bad choice if your looking for =
ribbons.

Thanks to John Macy for turning us on to them. Jon, the owner of Shiny =
Box
was very helpful throughout the buying process. He also took great care =
in first
matching mics then matching transformers then matching the mics =
w/transformers.
Painstaking I would say. I know it took him at least a day or so.
Tom

-----=_NextPart_000_00B9_01C5DB66.789EB020--Hello to everyone.
 After my last conversation with Adrian -wormhole's author- I have concluded
 that wormhole is not selling well (where are we guys ?) so maybe major updates
 will get longer to support as he has to concentrate his efforts to "selling"
 appz.
 I wonder how we Parisians expect plugin authors like Adrian to support plugins
 like wormhole which are a godsend for Paris with tremendous present and future
 possibilities... (he is thinking of making wormhole lighter so to have even
 more instances).
 I don't see us people here supporting wormhole and that makes me sad and
 maybe all my efforts toward this direction will fail somehow.
 If we don't buy it how can we ask him for this and that ?
 Even two or three buys would not justify major -Paris oriented- updates with
 wormhole...
 Please sign here if you care for using wormhole even as two channel cross
 bridge between two computers (NOTE IT CAN BE USED ON SAME COMPUTER WITH
 DIFFERENT APPZ TOO).
 If we sign enough people here (enough depends I would say 10 and over I will

kindly ask for a small discount for mass purchase.
Please try wormhole and see for yourself how great this plugin is.
We need Adrian (convince him make appz suited to Paris) and we certainly need wormhole.
It will keep Paris alive for things to come no matter where audio technology will go.
You will always have Paris thus connected with modern pc's doing what it is known to do best, sounding good when summing...
Please forgive me if I am being so pushy with this but noone else except for Adrian (till now) has showed so much interest to help us ,Paris users.
I wanna convince him make an automatic LATENCY compensator for VST plugins which I think would be great if succeeded.
Believe me if only two-three Paris users will sign this I will be having no guts to ask him that or anything else.
This plugin sells for 49 \$ only...
Please respond with signing also.
With regards,
Dimitriosi knew it, from the way he was always checkin' out kirks' phaser...

Well it looks like Malcolm Toft and John Oram are going toe to toe with new versions of the Trident 80b console. The killer thing is the 16 ch. versions are going to cost around \$2,500.00. The Toft console also has an optional digital I/O card. Can you say, killer front end for my Paris rig??? Check out the thread at gearslluts.com under "New product alert!", Important you start with the Toft thread. The whole Toft, Oram , trident war almost started again, the thread gets heated.

Check out the specs.

<http://www.toftaudiodesigns.com/>

http://aes.harmony-central.com/119AES/Content/Toft_Audio/PR/ADB-Consoles.html

<http://www.oram.co.uk/>

JamesThe mic pre on the Toft will be using a Burr Brown OP Amp mic pre, the same as the Toft ATC-2. The rest of the console will be Trident 80B. Allen Hyatt talks about all of the features though the thread. 56 channels at mix down on the 16 ch. model and 72 on the 24 ch. model, this thing should rock! There is also a 32 Ch. version coming out. I think I know what my next analog console will be:) I can't wait to hear them.

In =
my=20
 last post it should have read 56 input x8x2.

Although it =
is=20
 speculation on my part, I'm betting the toft mic pres are
going to =
be much=20
 better than the Oram mic pres on their version of the =
mixer.
 Read the=20
 thread on gearsluts.com Allen Hyett tells what components =
they
are=20
 going to use in the Toft mixer. They also made customer changes =
on=20

the mixer design since the thread started. They added a mono switch, UV meters and other things. It's amazing that a company would listen to customer requests and make immediate changes to the design! Check it out.

James McCloskey" <<mailto:excelsm@hotmail.com>> wrote: I'll give my opinion. The Toft mixer has more features and input than the Oram, and is projected to cost less, possibly closer to \$2,000.00! The production model doesn't even exist yet, so we will have to see how good or bad it is.

having said that, I will go out on a limb here. There has never been an analog mixer of this quality at this price point. This will be a great mixer for project studios, and pro studios. This will be a more pro mixer at a project mixer price. They don't use components like this in Mackie mixers or A&H. This is a different level. Of course this all remains to be seen!

My guess is the bad stuff your hearing about the new Trident is about the Oram Trident, which IMHO doesn't surprise me. But I think you should hear the stuff for yourself.

As Fletcher, well he has a tendency to be harsh and overly critical at times, he is a self proclaimed audio snob!

He did post a retraction of sorts about the Toft mic pres, he actually likes them! I believe he was comparing the Toft to more expensive mic pres. Allen Hyett posted Fletcher's retraction/explanation in the thread, you'll have to look for it and read it for yourself.

I know I made a comment about it being a great front end for Paris. My thinking is that it will beat something like a Mackie, not a high

end mic pre. With 16 high quality mic pres, 56 ch. of =
 input for 20
 mixing down keyboards etc., 8 busses, and a digital I/O option, =
 at 20
 \$2,000.00 it's hard to beat for what it is. The 8 ch =
 Shadow Hills 20
 pre is a very nice piece, it also cost about twice as much as =
 the mixer 20
 I'm talking about, and you can't mix down =
 56 channels 8x2. 20
 There is always something out there that is better for more =
 money, but 20
 not in an analog mixer at this price point. Of course =
 everybody's 20
 needs for their studio will be different. This =
 certainly 20
 is not the end all mixer, but it will be a higher quality mixer =
 than 20
 all of us can afford, and some of us may be able to afford =
 three at 20
 that price. As a pro audio dealer, I honestly thought this would =
 cost ten thousand more than the projected price. At it's =
 price 20
 point I think it is more revolutionary than the Mackie 8 buss =
 when it 20
 came out. Time will tell! Don't rule =
 this one 20
 out yet, it could turn out to really be a 20
 contender! James <"benjamin" <A=20
 href=3D"mailto:none@a.a">none@a.a/A> wrote: >> Yep, it's =
 got the 20
 trident name, and a couple of nice transformers on the mix 20
 bus, but it's not discrete or class A, so it's not going =

Hey, that's crazy. It says it works over airport.. anyone tried that?

Cheers,

TCDear Rick,

I am really dissapointed in your post.

If you don't care buying thats ok but saying that it is slavery to buy something that is so innovative for Paris and not only and considering the som many hours spent to make things smooth for Paris and wormhole as much as possible without me being involved at all in the sales of this plugin that really makes me feel sad.

I was hoping that you at least would appreciatte all the efoorts here and that would be supporting those nice and cheap plugins that help Paris .

I see people here payinmg 250 \$ for a single adat card so for 3 adat cards 750 \$.

plus a Mec 150\$ almost a 1000 \$ to just have 24 adat 20 bit tracks from one PC to another.

Now a simple plugin lets you have 24 bit (or 32bit floating until you use Paris dsp) of 24 audio tracks for a normal 2600 Ghz cpu.

So if you think that I am giving you guys a hard time then sorry I will stop what I am doing these last months.

thanks to all of you anyway.

Regards,

Dimitrios

If you search this site for "wormhole":

<http://tinyurl.com/afyz5>

You will find it well covered.

Gene ;-)
Hi, I'm a new user (almost) of a 20bit Paris system that came with EDS1000 card, MEC, C-16, cable and software. I got this system to record synth and vocals. I haven't installed the card yet or the software, and have a 2.6Ghz P4, 1GB mem, on an Abit IC7-G MB with 2 ATA 100 120G and 160G drives under XP Pro. I also have a Peavy VMP-2 pre and NHT A10 monitors, mics, synth, cables, etc. I'm not sure exactly how to hook up these components (is there a diagram available anywhere) or if I will need other components besides what I've listed above. Do I really need the 3.0 software? I have downloaded the available files at Parisfaqs site.

Thanks much,
Edna<http://www.crystalfiresw.com/products/wormhole.html>

If not, let me know where.

Thanks,

DeejHi Edna.....

Welcome. This will involve loading drivers and installing hardware and software obviously. There are detailed instructions on how to do this in the Paris manual. The procedure is pretty straight forward and the system you have should work fine for your needs. I don't see any red flags with your computer other than the possibility of needing to tweak the operating system parameters to optimize it for audio recording. Still, if you're not going to be dealing with huge numbers of tracks, this may not even be necessary. What operating system are you using? The software you have was designed to run on Windows 98 Se or Windows ME. To use Paris with Windows XP requires jumping through some additional hoops, but it's also pretty straightforward, just more complicated. What is your experience level with computers?

Regards,

Deej

Here:

[http://plasq.com/wormhole/Thanks Deej](http://plasq.com/wormhole/Thanks%20Deej),

I always build my own computers, so am comfortable with whatever needs to be done. I am currently running XP Pro with SP1, NTFS file sys. I use different drives for apps and data storage on this computer - that I have mainly used for video capture/editing/authoring/dvdburning. I have a 98SE computer also, but prefer to use XP if possible.

Welcome Edna,

Paris documentation is still available from:

<http://www.emu.com/support/welcome.asp?centric=653>

Paris was not officially updated for XP, so you will find no mention of later operating systems in the docs.

Several of the users here have returned to 98se or ME after having mixed results with XP.

I run a dual boot system that gives me both options, but I run 98 most of the time for Paris.

Gene Thanks Gene,

Quite a bit of documentation there - thank you. What do you avoid doing in XP with Paris? Are you using Paris 3.0? or does it matter?

the Paris XP driver was developed with Paris 3.0 as the OS. It does work with earlier incarnations of Paris. Installing the XP subsystem **exactly** as described in the instructions is the key to joy and happiness with this system on XP. I used XP with Paris for a couple of years and found it to be very stable.

The downside of using the Paris/XP setup has to do with interfacing Paris with ADAT machines (the Paris XP driver will not see them) and with using multiple Paris ADAT modules in the larger modular expansion chassis units (MECs). The Paris XP driver, in most cases, will not recognize more than one ADAT module **per MEC**. This can become an issue in larger Paris configurations.

The only other issue I see on the horizon for you is hyperthreading. This is a no-go with Paris so it should be turned off.

Regards,

Deej
