-----=_NextPart_000_00D5_01C72E7D.AC0077D0--I know 64 was recommended for FAT32 but
not sure for NTFS, I guess it would
be the same. Bigger the cluster size, more efficient the data transfer
,assuming large file sizes like audio.

Rob

>>Hi Rod,
Leave it at default. It sets it according drive size. The old cluster format thing was for fat32 under win98se. You will not get any noticeable perform gain from any any setting other than the default.

>Hey Chris....I sent that file that you gave me last week over to my buddy.
(this is the guy I built the comp for last year..used the shopping list
you gave me)I coached him'over the phone, how to install it, according to
your instructions.
Apparently it still didn't work. It my just be that he still didn't do it
right, but I was just checking. This will work in Cubase as well as in Wavelab,
right. (I've used this file in Wavelab before). Again, thanks for your help.

RodHow do you insert a compressor to a buss or Main? Also Didn't I read on the
forum that there is an issue about one of the compressors functions not being
what it says it is, but backwards or something?Is there a way to format with 256k clusters?
Wouldn't that transfer audio
much faster??? Maybe if we could format with 1MB clusters we could transfer
data so fast we wouldn't have latency!!!!!!.....yeah!!!!.....I need to
try this!!!!.....maybe 8MB clusters even!!!!

(oh wait, we were talking about a voice of reason.....I don't understand
why, but we were.)

case scenario, I was hoping
there was a way to do it like you do a channel. Just going to the top and
clicking on EDS insert and assining it to be a compressor.
I just went to the Buss/Master page and under settings hit "show inserts"

and they only pop up above the Global Master and not a Buss. I put all the drums in buss 3 and was hoping to set a compressor on that buss only.

If you're doing this in real time, you won't be able to do it with native plugins. They will only work if you print the tracks, and if you plan on doing that, why would you use a second Paris rig? Only EDS plugins or external hardware would work as I think you are describing. Still it's a tempting idea. I've thought about it a bit myself. You could have 4 Paris rigs summing into one as long as they were timeline synced via smpte.

Yiu'd have to sync them if there was any automation on the "mastering" pc. But if the automation were on the originating pc and levels were left alone on the master...

It's convoluted concept...sampleslide crazy probably...and right down your alley DJ!

Jesse... here's what I did - it's the same mix on both cuts, but I did have to do a couple things differently in order to stem it out into 4 stereo submixes to sum it in Pulsar. The Native (CubaseSX) ITB mix had a limiter on the 2-buss - it was the limiter from Izotope's Ozone - which is a very good quality transparent limiter, so not being able to insert a vst plugin across the Pulsar 2-buss, I used their mastering limiter in Optimaster, set to the same settings, which was basically at -2 or -3 db threshold... very light, just keeping any peaks from going over, basically & maybe smacking down some of the bigger hits a bit, in the case of both mixes.. Then I split the mix in Cubase into four stereo submixes going out via lightpipe... across each of these submixes I inserted a transparent peakstop limiter just to make sure I had no digital overs. On the drum submix there were only a handful of overs across the entire song, and across the lo-end submix there were even fewer, just 3 or 4 IIRC, the other two busses had no overs registered , but I left the limiters on those just to be safe - in all those cases, the limiters were set for "0" threshold, and -0.03 output level, so they were hardly affecting the sound, if even at all.

That's it, really. I split the mix as follows to go into Pulsar:

Submix #1: Drums & Drum Room 'verb
Submix #2: Bass, Lo-end Keys, and Rhy. Guitars (no verbs or delays)
Submix #3: Hi-end keys, most all other guitars (no verbs or delays)
Submix #4: Vocals, any solo or fill instr. that weren't on #2 or #3 and all reverbs & delays except for the one for the drums.

NeilSee what you hath wrought, Dimitrios - with all your Prior Pulsar Preaching? lol

A .cda file is nothing but a tiny little file with some coding on it that references some track info, it's not the actual audio file itself. Can you covert the wav file to hi-rez mp3 (320, not 128)? If so, that'll be plenty clear enough to get some fair comments & appraisals... I can host it for you if you e-mail it to me: neil DOT henderson AT sbcglobal DOT net

Nope. Only on printed tracks.

The recorded tracks would really be throwaways as I was
> really just looking at keeping a print of the Globals in this scenario.
> Yiu'd have to sync them if there was any automation on the "mastering" pc.
> But if the automation were on the originating pc and levels were left

Yes, but of course, you need lots of Paris rigs if you're going to bus more than one group and this would require at least the playback computers being synced.

>

> It's convoluted concept...sampleslide crazy probably...and right down your
> alley DJ!

Believe me, I've thought long and hard about it. I've got the makings here of such a setup (4 x computers and 4 x MECs). I could use three of the comps as playback rigs and bus the submixes to the fourth one as the summing rig. All I would need would be a smpte lockup on the three playback machines. The really sick way to do this would be to use 8 synced playback rigs into one summing rig. You could do this pretty elegantly with 8 EDS cards, 8 x MECs, a JL cooper Datasync II receiving ADAT sync from an ADAT module on the master playback computer outputting smpte to 7 x old Opcode Studio 64 XTC's interfacing to the 7 slaved and daisy chained Paris computers. Of course, you would also need 8 monitors and a helluva KVM as well as a way to sum the outputs of 8 stereo spdif sources into two ADAT modules on the summing DAW, or just do it via analog and strap a bunch of cool analog stereo comps across the mix bus of each of the 8 x Paris rigs.

I must confess, even "I'm" not this crazy.....yet.

this should allow the download of a demo track I did for a band a while
back. Reallllll bluegrassy stuff.OK then...scroll down until you see "Download for Free"

This takes you to another page.Scroll down until you see "click here for
download"

Guess I may subscribe to the premium service so everything happen on one
page.

This was a fun demo. 11 mics set up in the living room of my old place with
the band strung out in a line just like a stage recording. Bleed all over
everything and this bunch of guys saying wierd things to each other like
"play somethin' lonesome". This was my first experience recording a
bluegrass bandbut certainly not the last.

;oo

<http://www.filefactory.com/file/b8da61/>

They were drifting all over the place during this song and wanted me to trash it. I,OTOH,,once I picked my jaw up off the ground, decided to talk them into keeping it and it was eventually included on the demo CD. This was a fun experience. They didn't have any money and I didn't have any experience with sessions like this so we eventually all got something positive out of the deal.

I was picking my jaw up off the floor a lot that night. These guys called
themselves the Broke Mountain Bluegrass Band. Very young guys-early 20's and
extremely talented. They took this demo and it opened some doors on the
festival circuit. You can Google them these days and get quite a lot of
info. I'm glad they're doing well, though they have all scattered to other
bands now. This demo got their toe in the door and they won the best band
award at the Rockygrass Bluegrass festival in Lyons CO later that summer.

I wish I had taken more time with this session and known a little more about
WTF I was doing, but it is what it is and it got the job done for them.
;o)

Neil,

Thnaks for the info. I would like to hear a test on more fair ground though.
Removing the limiters and either letting the overs happen or lowering the
mix so they aren't present.

I'm actually finding I get more transparent results just clipping SX than
I do using limiters, even great ones. I recently had a mix that sounded
nice and loud and punchy but was clipping SX's bus. So when it came time
to actually bounce it I lowered the master and applied limiting instead.
Turns out the mix sounded much better without the limiting and just clipped.

Do you have any intention on doing a comparison with the limiters removed
from the equation?

Thanks,

JesseGood stuff DJ, I get to do a little Bluegrass around here as well from time
to time but there is a different twist to it, its in French. Did this one
back in 01 I believe, guy by the name of Paul Hebert.

http://www.studiomanitou.com/mp3demo/Paulh1_Elecout.mp3

You can call it fair, you can call it unfair - having limiters
that are barely kissing the peaks isn't going to affect the
depth & detail to the degree you're hearing the diference in

these two files. If I lowered the gain on the submixes then someone would say it's unfair because I didn't have as hot of a level set going to Pulsar. All I can do is the closest comparison possible, and this is it, IMO. If anything, having the limiters on the out-busses from Cubase into Pulsar would tend to CLOUD the mix if they weren't transparent, rather than clarifying it - how do you explain that? You can't. If I took the limiters off, and had some heat going into the lightpipes, then someone would say that THAT wasn't fair because I had clips going out into Pulsar & that made the Pulsar mix "brighter & more present", whereas the 32-bit architecture in the ITB Cubase mix handled those overs in a difference manner. I guess there's really no point in me doing any more of these - everyone can just go buy their own Pulsar card now & see for themselves if they find it useful or not.

>I'm actually finding I get more transparent results just
>clipping SX than I do using limiters, even great ones.

I hate clipping in SX, personally - if you like it, then go for it. Poor management of gain structure in Native scenarios is part the problem with summing issues therein, IMO - I'm not saying you can't get a good mix out a pure Native ITB situation; in fact, I've argued that point ad nauseum herein & even some weeks ago posted some examples of the same mix summed ITB in Cubase; Stemmed out into five submix files, then reimported into a new project in Cubase; and also summed in Paris (no limiting across the submixes there, because I was going into Paris via analog, not digital), and while there were definite distinctions between the three, there was also no consensus that one mix stood out as being better than the other. If you're clipping stuff & liking the results, then who am I to criticize, but personally I think you're doing yourself a disservice by having 44,1000 mistakes per second in your songs if you're redlining the 2-bus, multiplied by however many tracks you've got going if you're redlining there, as well. If you like that kind of math, then go for it; personally, I don't.

>Do you have any intention on doing a comparison with the
>limiters removed from the equation?

Do your own - I'm not trying to gain converts here and I'm not trying to prove a favored position... I've just been posting some findings & my observations & clips of one thing or another so people who might be interested in this stuff could benefit from hearing the differences before they fork over the money. I could care fucking less if they agree with me or not, and now I'm frankly tired of one person saying I rigged an earlier test

one way or another because I wasn't "pushing Paris like it should be pushed", and another accusing me of hiding things because I didn't tell people in advance which version was which (well, than that wouldn't have been a true a/b, would it?), and someone telling me that the reason a Cubase ITB mix clip I posted that sounded better than another band done in the same musical genre but in PTHD & mixed through an SSL, sounded better in Cubase because I didn't know how to use an SSL....What the mother-fucking fuck is that???? Now you're saying you want to hear this on "more fair ground", and asking: "do you have any intention of...?".

The answer is: "No, I have no more intentions of...". Build your own damn summing rig & do your own damn tests... I'm not the Berklee College of Mixdowns here, ferchrissakes!

Where's my coffee?

Neil>I'm not the Berklee College of Mixdowns here, ferchrissakes!<

LOL!!!!.....sounds like someone woke up on the wrong side of the Tyrannosaurus Rex.

.....c'mon over and I'll brew you a cup of my organic Tthree Mile Island Thermonuclear.and we can try some summing experiments using coconut shells and hemp twine.

;o)

I do think the limiters (and quite possible more to do with Optimaster) have affected the test. The RMS level in the SCOPE version was as I said about 1-1.5db higher. We all know louder sounds better generally with this sort of thing.

And using limiters doesnt make the test any more meaningful than just letting it clip. Whether a limiter squashes a peak or if you just let it clip you're still sending hot signals that have been converted to integer format down the lightpipe. In comparison it sounds like the SX mix didnt have any limiting until the final 2 buss, correct me if I'm wrong.

If anything maybe what you've shown here is that it sounds better to limit a mix over a course of 4 stereo busses instead of just the master fader. That could explain why its more open, less stuff like drums triggering the dynamics of guitars, vocals etc..

Although not sure if you mentioned this but when you bounced the SX version did you have the peakstop limiters still turned on (the ones you used prior to sending out to Pulsar)?

Also when you used the Optimaster did you have it in multiband mode? I know from experience it can deffinatly liven up a mix.

Why not just make a mix that doesnt peak in the first place and use that. Then you can forgoe all this limiting affecting the sound. If the test is meant to cover summing then the absense of peaks in the mix shouldn't make a difference.

Saturation/limiting and summing are two different issues...

>I guess
>there's really no point in me doing any more of these -
>everyone can just go buy their own Pulsar card now & see for
>themselves if they find it useful or not.

Neil,

Sorry if I came across as criticizing your test. I understand you don't owe anybody info beyond what you have sought for your own needs in the first place. Just so you know I own a Pulsar system, for about 4 years now so I can and will do my own tests. I was just curious if you had planned anymore, I'm not suggesting you should on my or anyone else's behalf.

>
>>I'm actually finding I get more transparent results just
>>clipping SX than I do using limiters, even great ones.
>
>I hate clipping in SX, personally - if you like it, then go for
>it.

Clipping in software is clipping no matter where its done unless the particular software is designed to limit via some sort of complex algorithm. Paris, SX, Logic etc... all just flat top the peaks, nothing special or different.

Now the old way some software (like Paris's native mode) handled overs was to wrap around signals which did sound bad. Hence the bad name clipping digital initially got.

>Poor management of gain structure in Native scenarios is
>part the problem with summing issues therein, IMO - I'm not
>saying you can't get a good mix out a pure Native ITB

Well it matters what you define a "mistake" then. Hard clipping can be much more transparent than a limiter which in most cases imposes an envelope upon the signal. My SX example showed that. And everyone who has ever "pushed" Paris into the red has used the same exact clipping as what I'm talking about.

All Paris did was clip transients, SX does the exact same thing. Now perhaps Paris has other things going for it, but when it comes to saturation they are doing the same thing.

>>Do you have any intention on doing a comparison with the
>>limiters removed from the equation?

As I explained earlier these comments weren't meant to be taken like that.
It seems some of your tests were meant for more subjective comparisons.
But with this one I feel like to truly test the summing you'd have to take
care of some of the variables here.

But again if you think you've learnt something useful from these tests more
power to you. What bothers me is then the results of this get posted on
forums, (such as Planetz) etc.. as "summing" tests and then people end up
forming an opinion based of it and spread it around when its not really testing
summing in its pure form.

JesseAnyone know how can I get a new key challenge key for 3.0? I changed computers
and now need a new unlock for my new challenge. I tried Support@intdevices.com
but no response.

Happy New Year...

DougHey Neil,

While I disagreed strongly with your initial reaction/attitude to Pulsar
stuff, I agree completely here. People, Neil is trying to give out useful
information for free. If you think the tests could be improved, feel free
to approve them. It's like free software projects where someone complains
that a certain feature is really crucial but missing. The maintainer responds,
'Patches always welcome.'

comment/question.

First, secularism is not hedonism. Secondly, a secular society is not necessarily devoid of spirituality, in fact, by decreeing a separation of church and state, wasn't our own constitution designing a secular state? Third, many non-Christians (such as myself) are rife with spirituality and Christian values, while many who call themselves Christians seem to value only wealth and power. Fourthly (sounded better than "fourth") Christians are not the only people who reject and oppose radical Islam. Onward Christian soldiers, by all means, but don't forget the rest of us who are not going to be told what to believe by fundamentalists of any species. Lastly, I don't see how encouraging more fear of Islam is going to do anything but create more hatred, violence, and radicalization.

What did any of this have to do with Saddam, anyway? He was a secularist.

And why is it OK to talk politics again? Last time I made a political comment SOMEBODY scolded me . . .

Louder doesn't sound wider & clearer, plus what if I had reduced power on the Pulsar mix so that the RMS levels were identical, then I would've been accused of manipulating THAT in some unfair manner... you know, I didn't realize there was going to be a fucking test or else I would've maybe studied more back in grade school.

You need to do three things:

1.) Go read my reply to your post on the Pulsar forum - if you're going to use my name in public & state that I said something, you'd better be fucking clear about what it is that I stated, and not leave out information or infer something as you did therein.

2.) Do your own comparison & arrive at your own conclusion -

I'm sure you're the OOOONLY one who can do this "fairly" and "without a difference" between the two.

3.) Send me a check if I am to give you any more teutelage, or if you want any more of your questions answered... my open rate is \$100 an hour.

As I've said, I don't have a dog in this race, and I'm not "Pimpin' for Pulsar", so WHY WOULD I SKEW THE TESTS????

And now to paraphrase that famous barbershop scene in 'Coming to America': "Fuck you, fuck you, fuck you, and fuck you... who's next!?!?"

Thanks Thad, I appreciate it (fucking ingrates!).

What did you disagree strongly with me about?

- a.) That the Pulsar reps misrepresented their product, or just don't know it as well as they should?
- b.) That they will whine if you mention this to them?
- c.) That the platform doesn't sync to a not-so-uncommon samplerate & will temporarily render your system a little bit fucked-over if you try this.
- d.) That I think the Pulsar Plugins are very clean, but rather so-so & kinda "plain vanilla", for the most part?
- e.) That six SHARC chips render a remarkably low level of DSP power at samplerates over 48k, perhaps explaining their staunch defense on their forum of 44.1k as the samplerate to use, contrary to everyone else in the industry who makes multisamplerate-capable stuff not giving a big shit about which samplerate you choose to employ?
- f.) Something else that I perhaps missed here?

:D

Neill guess what I'll do is mute the first two of my three busses and with the drums on my third, I will bring up the compressor on the Global Master and

make a "Disk Record" that way I will have a stereo file of the drums compressed, then bring that stereo file back into Buss three and mute all the other drum tracks in Buss three. Should work ok shouldn't it?

Stevl guess what I'll do is mute the first two of my three busses and with the drums on my third, I will bring up the compressor on the Global Master and make a "Disk Record" that way I will have a stereo file of the drums compressed, then bring that stereo file back into Buss three and mute all the other drum tracks in Buss three. Should work ok shouldn't it?

Steve...have ever bought a microphone because:

- a.) You heard that's what quite a few famous singers use and you like the way they sound through it?
- b.) You heard that's what certain well-known producers or engineers prefer for "x-type" of guitar sound (or kick sound, or - you get the point) and you're going for that sound?
- c.) Someone recommended it personally to you?
- d.) It's the hot new mic or the newly-hot vintage mic?
- e.) Any combination of any of the above?

PART TWO: Now if that mic happened to be a vocal mic, did you personally...

....a/b it against another mic with Gladys Knight, Christina Aguilera, Vince Gill, and Luciano Pavarotti (or whomever you heard that you liked on it) each taking turns on both mics?

If that mic happened to be a mic that you were going to use primarily on guitar cabs, did you a/b it against another mic using the same signal chains on all the records/CD's that you've heard it used on that you liked the guitar sound of, and having the same players as on the CD's do the playing while you a/b'd the mics?

If that mic happened to be a kick drum mic, did you do the same thing as above, using the same kick drums used on the recordings you liked the sound of, and running through the exact same console, etc....?

....and finally, if you did all of the above, did you then listen to a mix of an entire song around these mic tracks, using the same mix guy, the same studio, exact same console, and have it mastered by the same mastering engineer using the exact same settings as he used on the CD, then have the CD replicated in the same facility, not burned off on a CD-R, and THEN after all that decided that you liked mic "A" better than mic "B"?

If you haven't (done all of Part Two), then quit giving me shit about my comparison files & tests, because they are a LOT

closer to every single element of Part Two above than the criteria you use to make anywhere from 95% to 100% of your purchases. Got some perspective now?

And you've gotten it for free. You're very fucking welcome.

And that is the last thing I am ever going to say about this topic.

NeilHappy New Year everybody!

Since it's the beginning of another year, I decided to take a look at all of the domains that I manage and see what could be done to improve them.

As I was looking at ParisFAQs.com, I realized that I've uploaded lots of files, but never actually put links to them on the web page! Sheesh...

So, I've fixed a lot of that - you can now download versions 2.1, 2.2 and 3.0 of PARIS for both Mac and Windows, plus I've added the links so that you can get all of the plugins. I've also added the links for the PDF files of the introduction and reference manuals as well as the PDF files of the booklets that came with the MEC, the 8 in, 8 out and smpte cards. I don't have a copy of the one for the ADAT card. Does anyone have a PDF of that?

What else is missing from the site?

Doug

The point was not about religion, it was about whether a culture to whom personal pleasure and comfort is paramount, can defend itself from

fascism. The source from which one draws the will to resist fascism is

a

seperate issue from the fact that Europe may or may not be able to resist it.

>don't forget the rest of us who are

>not going to be told what to believe by fundamentalists of any species.

Good. Glad to hear it. What's your plan?

>Lastly, I don't see how encouraging more fear of Islam is going to do

>anything but create more hatred, violence, and radicalization.

Your characterization is off. He is asking for an understanding of the true nature of the threat, not asking for fear in and of itself. How is he wrong?

If he is right, what are the consequences?

>What did any of this have to do with Saddam, anyway? He was a secularist.

Which day of the week?

It had nothing to do with Saddam. It had everything to do with me posting a joke about Saddam and having several people go off because of it.

It went:

Saddam Executed - New York Times goes into mourning!

Now, can you chuckle at that, or do you feel the need to give me a good dressing down for it?

Your answer will reveal your level of tolerance for a variety of views.

How are you BTW?

DCNeil, if "old" me remember correctly, I served some of the same questions here

some years ago. I think it was in the last century;-) Didn't get any answers as far as I remember.

I think I will not speculate why some people can have so strong meanings in the mouth

and not the brain about so much;-)

But, have it something to do with our form for democracy, that we have the rights to have a meaning about everything, without thinking it over at all, what we have meanings about?;-)

I must say, people that's staying here year after year have something to have their "true" meanings in.

I think it must be one of the things why this site have survived for so long with a "dead concept" like Paris.

Your "Creamware" tests here are just in the right spirit of this sites "think it over mentality", as far as I can see.

I have really enjoyed the tests, without thinking it over to buy a "Creamware" card at all.

Hmmm....what have my "feelings" now written?;-).....

Thad,

I appreciate the info from Neil. But I don't see how a constructive criticism of how the test could be improved is a bad thing. I've spent a lot time doing tests on how Paris clips, was laughed at for my findings, even told I must be smoking crack to hear what I heard yet I kept posting info to try and show people what I'd found. And eventually some people at least opened their minds a bit to take it in and saw what I had discovered.

If Neil stands by his tests then I respect that and I'll just concentrate on doing my own.

Neil,

I never said you were trying to skew the tests one way or another. And yes I could have explained your use of limiters more on the PlanetZ forum. My point of writing that was that it wasn't a straight up comparison regardless of how lightly they were being used. And I really suspect Optimaster has something to do with this. But of course I could be wrong.

You seem to be taking these comments quite personally, its just a summing test man. If you're not inclined to take them into consideration fine, I understand but why all the hostility?

Jesse"Neil" <OIUOIU@OIU.com> wrote:

>2.) Do your own comparison & arrive at your own conclusion -
>I'm sure you're the OOOONLY one who can do this "fairly"

I just have and here it is reposted from PlanetZ:

"Ok I just did a test on my own. Took a track and divided it amongst 4 stereo busses. Drums in 1/2, Bass in 3/4, Vocals in 5/6, and synths in 7/8.

I lowered these 4 busses by an equal amount so they did not clip. I then sent them out to SCOPE and summed there and recorded the mix via STS5000.

I then bounced 4 pairs of audio files within Cubase from the same busses at the same level they were at for SCOPE. I imported these into a new project and summed them in Cubase.

I then took the two files and compared them in Cubase. I looped small sections over and over on 2 separate tracks. Didn't hear anything different. Even turned down the monitor so I couldn't see which was which, let it loop and tried to spot one take from the other, no luck.

I did try inverting the phase of one in relation to the other and they didn't cancel, there was high end info present. But due to capturing the mix using the STS the bounces weren't exactly aligned. And I didn't hear a change anyhow so this delta doesn't seem important anyways.

I have to say I would love SCOPE to provide better summing and clearer mixes just by running busses to it yet I don't see that happening here. I truly don't believe summing is an issue in mixing today, it's always down to other factors.

Jesse "I just don't buy any of it. The video was lame. I'm amazed the American people accept that as proof. I don't.

<http://saqqararecords.com/MiscAudio/BrandonGoodwinDrumMix.mp3>

All,

Happy New Year!!

This is my 1st attempt at a live drum recording.

I have always used Drumagog and electronic samples in the past.

This is a cheap TAMA kit setup with....

Kick =3D open front

Snare =3D Steel (I dont know maybe 5 or 6 inch deep N'Dugu signature = series)

Zildgen =3D Dark crash, Dark Ride, Dark HiHat

Tom =3D 11 or 12 inch with bottom head

Floor Tom =3D without bottom head

1 - AKG414 in Cardioid w/20db pad laying on blanket inside the Kick.

1 - SM57 in the usual spot on the top of the snare.

2 - Matched pair Rode NT5s in a XY stereo configuration...3 feet above = the cymbals centered between the Ride and the Crash...directly above the = Tom.

I applied EQ and compression to the Kick and Snare tracks. The = compression is a typical

3.99:1 ratio with 20ms attack and 50ms release. Using Waves C1 = compressor.

Also I applied a PARIS Gate on both tracks.

I scooped out the lows and mids of the OHs just allowing the meat of the = snare back in.

I gave a couple db to the highs and compressed it using the same = settings as on the other tracks, but with a 26ms attack.

I then mixed all the tracks together to taste.

The room was very live...hardwood floors and vaulted ceiling.

No attempt at Isolation.

I am pleased with the seemingly even cymbals/hat.

The Kick doesnt quite have the snap I would like, but I was using a felt = beater. Also my technique SUCKs...Can you hear the beater roll on the =

head?

I leave the beater up after I kick which greatly reduces punch of the = kick.

The snare I am not pleased with. I really dont like the snare itself. = Dont like its sound. This snare actually sounds better tuned like a = piccalo.

Critques are very Welcome!!

Thanks Again!

Brandon

-----=_NextPart_000_0044_01C72FCF.63609C00--I'm going to assume my suggestion to route the drums through two auxes and back down two channels (via wires) didn't work then?

Why not try running a mix of just the drums (without Compression) and put those two tracks into a mixer and apply compression to those tracks...at least you won't be locked into one compressed sound that way

Actually I believe I did this in real time using Reaper without printing tracks...at least I think I did. I was trying so many variations of things at the time I was experimenting that I might be mistaken but the reason I say I did is because Reaper had no "sync to" option, yet I still got all FX inserts to work in real time

as always YMMV

Donwell, it doesn't like me :)

>I have a thing about Death Penalties in general, but it is primarily based
on my issues with killing innocent people. That was not an issue with Hussein.
His death was surly justified, but just below the surface lies the real reason
and innocent alike.

When leaders start wars for any reason less than the actual preservation
of their country or to stop a clear danger to the majority of their population,
they are doing it without just cause. That kind of war is about the ultimate
power of leaders. In our case, I believe we went to war to show our willingness

you will be stripped of your country and we will hang you and the rest of

General Pervez Musharraf writes in his new book that we did just that to

go far past showing your willingness to attack other countries from afar,
you must show your willingness to sacrifice the lives of your military to
show your true resolve.

Ultimately, wars without just cause are just a different form of human sacrifice.
To die for the Emperor. It certainly aint new.

Historically, many leaders have required human sacrifices of their own people:
Aztec warriors, Imperial Rome, Hitler's Germany, et al.

On a much larger scale has been the sacrificing of entire armies. Millions
have died over the millennia for the uncontrolled hubris of a few.

Once again we have all-powerful leaders in the US willing to trade lives for their personal Cause de Jour. We have not come far in the last few thousand years. This is the exact reason the US Constitution goes to great lengths to insure the limited and controlled power of the President, and one again we have failed as citizens and allowed this to happen.

Bush is our Caligula! - Hail Cesar!

Gene

As to the question about the validity of the tapes and if Hussein is actually

Ken Lay is dead. Sort of none of the above. First, you are NOT working in a vanilla environment. Of the main sample rates 44.1/48/88.2/96 88.2 is BY FAR the least common, so I'm not all that surprised that of the four it caused the most problems. In the end it was possible to make it work, and yes the CW folks should have an internal database of previous trouble tickets that they could search to give you a fix. However, when you were not happy you sent the card back and gave you your money back. No blood, no foul. So I'd say their performance was B-/C+, I've had much, much worse from pro audio companies. Like one who tombstoned their gear, screwed their users, and left me with a near worthless DSP system named after a famous city in Europe.

But the real problem I had was the 'Why doesn't this just fucking work' thing. Like it or not, doing things like DSP summing for high track count audio projects at 88.2 means you're an early adopter. Early adopters get their noses bloodied, it's part of the deal, you get cooler toys with better performance than the rest of the world but you get to find some answers for other people. I've been doing that in the audio world for 10+ years now, posting on forums and mailing lists with what I've learned, and by now I've had my nose bloodied so many times I've quit expecting anything else. When I posted a few suggestions and encouragement to you I got a screed about how it all should 'just fucking work.' Which was actually a useful, watershed moment for me, because I realized that there's no real reason I should fucking help fucking anyone anymore. 10 years seems like a very reasonable contribution to the computer audio community, I'm sure there are lots of people more capable than me these days to do the job, and I work a demanding enough day job that I should really concentrate whatever music time I have on my own music, not on fixing other peoples' computer problems.

To me, someone completely self taught in digital everything, that has taken time and effort and frustration and mistakes to get this knowledge, it's like a novice guitarist buying a strat and complaining he doesn't sound like Hendrix. 'I went to the store, and I bought a strat. It's a fucking '65 reissue, and the guy in the store said it's exactly the same model Hendrix used, and it doesn't fucking work. I don't sound anything more like Hendrix. So, do I need to get a Marshall too or does this strat just suck?' Exaggeration,

yes, but at the core it's the same thing.

And I want to stress, I'm really not pissed off, it's nothing personal, and it was a very useful thing to think about. I think it's time for me to pitch in occasionally with silly jokes and advice about highly specific things and leave the rest to other people, while concentrating my real effort on things like the Catalyst web framework and my own music.

First off get that 414 off the blanket and floating in the air somewhere = near the kik drum....position to taste

as for the snare, tighten the snares and add a bit of dampening to kill = the ring a bit...you could also retune to the desired sound and adjust = the dampening to taste

Try putting the OH's at your position as the drummer...approximately = shoulder width and at least a foot above your head (to start with) then = try some experimenting with aiming...you may even want to lower the mics = above the respective toms ie: split the racs and aiming slightly at the = snare and then the other mic over the Floor and then adjust their height = to get the cymbals.

Just a few variations on a theme here

DOn

"Brandon" <a@a.com> wrote in message news:459cf9fb@linux...

<http://saqqararecords.com/MiscAudio/BrandonGoodwinDrumMix.mp3>

All,

Happy New Year!!

This is my 1st attempt at a live drum recording.

I have always used Drumagog and electronic samples in the past.

This is a cheap TAMA kit setup with....

Kick =3D open front

Snare =3D Steel (I dont know maybe 5 or 6 inch deep N'Dugu signature = series)

Zildgen =3D Dark crash, Dark Ride, Dark HiHat

Tom =3D 11 or 12 inch with bottom head

Floor Tom =3D without bottom head

1 - AKG414 in Cardioid w/20db pad laying on blanket inside the Kick.

1 - SM57 in the usual spot on the top of the snare.

2 - Matched pair Rode NT5s in a XY stereo configuration...3 feet above = the cymbals centered between the Ride and the Crash...directly above the = Tom.

I applied EQ and compression to the Kick and Snare tracks. The = compression is a typical

3.99:1 ratio with 20ms attack and 50ms release. Using Waves C1 = compressor.

Also I applied a PARIS Gate on both tracks.

I scooped out the lows and mids of the OHs just allowing the meat of = the snare back in.

I gave a couple db to the highs and compressed it using the same = settings as on the other tracks, but with a 26ms attack.

I then mixed all the tracks together to taste.

The room was very live...hardwood floors and vaulted ceiling.

No attempt at Isolation.

I am pleased with the seemingly even cymbals/hat.

The Kick doesnt quite have the snap I would like, but I was using a =

felt beater. Also my technique SUCKs...Can you hear the beater roll on = the head?

I leave the beater up after I kick which greatly reduces punch of the = kick.

The snare I am not pleased with. I really dont like the snare itself. = Dont like its sound. This snare actually sounds better tuned like a = piccalo.

Critques are very Welcome!!

Thanks Again!

Brandon

First off get that 414 off the blanket and floating in the air =
somewhere near the kik drum....position to taste

OK

as for the snare, tighten the snares and add a bit of dampening to =

kill the ring a bit...you could also retune to the desired sound and =
adjust the dampening to taste

Snares are tight.. I will try retuning it though.

Try putting the OH's at your position as the drummer...approximately =
shoulder width and at least a foot above your head (to start with) then =
try some experimenting with aiming...you may even want to lower the mics =
above the respective toms ie: split the rcs and aiming slightly at the =
snare and then the other mic over the Floor and then adjust their height =
to get the cymbals.

I was going to try just that next.

Just a few variations on a theme here

DOn

"Brandon" <a@a.com> wrote in message news:459cf9fb@linux...
<http://saqqararecords.com/MiscAudio/BrandonGoodwinDrumMix.mp3>

All,

Happy New Year!!

This is my 1st attempt at a live drum recording.

I have always used Drumagog and electronic samples in the past.

This is a cheap TAMA kit setup with....

Kick =3D open front

Snare =3D Steel (I dont know maybe 5 or 6 inch deep N'Dugu signature =
series)

Zildgen =3D Dark crash, Dark Ride, Dark HiHat

Tom =3D 11 or 12 inch with bottom head

Floor Tom =3D without bottom head

1 - AKG414 in Cardioid w/20db pad laying on blanket inside the Kick.

1 - SM57 in the usual spot on the top of the snare.

2 - Matched pair Rode NT5s in a XY stereo configuration...3 feet = above the cymbals centered between the Ride and the Crash...directly = above the Tom.

I applied EQ and compression to the Kick and Snare tracks. The = compression is a typical

3.99:1 ratio with 20ms attack and 50ms release. Using Waves C1 = compressor.

Also I applied a PARIS Gate on both tracks.

I scooped out the lows and mids of the OHs just allowing the meat of = the snare back in.

I gave a couple db to the highs and compressed it using the same = settings as on the other tracks, but with a 26ms attack.

I then mixed all the tracks together to taste.

The room was very live...hardwood floors and vaulted ceiling.

No attempt at Isolation.

I am pleased with the seemingly even cymbals/hat.

The Kick doesnt quite have the snap I would like, but I was using a = felt beater. Also my technique SUCKs...Can you hear the beater roll on = the head?

I leave the beater up after I kick which greatly reduces punch of = the kick.

The snare I am not pleased with. I really dont like the snare = itself. Dont like its sound. This snare actually sounds better tuned = like a piccalo.

Critiques are very Welcome!!

Thanks Again!

Brandon

Another very important point which you alluded to are the drums =
themselves and without a doubt the player. =20

Having a good sounding kit will make the process much more enjoyable as =
will a competant groovin' drummer manning the stix. Believe me the =
difference can be like night and day.

that being said I would love to hear more as you experiment with =
placement...could be the beginnings of a very informative thread

:-)

Don

All,

Happy New Year!!

This is my 1st attempt at a live drum recording.

I have always used Drumagog and electronic samples in the past.

This is a cheap TAMA kit setup with....

Kick =3D open front

Snare =3D Steel (I dont know maybe 5 or 6 inch deep N'Dugu = signature series)

Zildgen =3D Dark crash, Dark Ride, Dark HiHat

Tom =3D 11 or 12 inch with bottom head

Floor Tom =3D without bottom head

1 - AKG414 in Cardioid w/20db pad laying on blanket inside the = Kick.

1 - SM57 in the usual spot on the top of the snare.

2 - Matched pair Rode NT5s in a XY stereo configuration...3 feet = above the cymbals centered between the Ride and the Crash...directly = above the Tom.

I applied EQ and compression to the Kick and Snare tracks. The = compression is a typical

3.99:1 ratio with 20ms attack and 50ms release. Using Waves C1 = compressor.

Also I applied a PARIS Gate on both tracks.

I scooped out the lows and mids of the OHs just allowing the meat = of the snare back in.

I gave a couple db to the highs and compressed it using the same = settings as on the other tracks, but with a 26ms attack.

I then mixed all the tracks together to taste.

The room was very live...hardwood floors and vaulted ceiling.

No attempt at Isolation.

I am pleased with the seemingly even cymbals/hat.

The Kick doesnt quite have the snap I would like, but I was using = a felt beater. Also my technique SUCKs...Can you hear the beater roll on = the head?

I leave the beater up after I kick which greatly reduces punch of = the kick.

The snare I am not pleased with. I really dont like the snare = itself. Dont like its sound. This snare actually sounds better tuned = like a piccalo.

Critques are very Welcome!!

Thanks Again!

Brandon

Don ...do you have any suggestions on the mixing technique?....EQ or = compression??

--=20

Thanks,

Brandon=20

"Don Nafe" <dnafe@magma.ca> wrote in message news:459d34fb@linux...

Another very important point which you alluded to are the drums = themselves and without a doubt the player. =20

Having a good sounding kit will make the process much more enjoyable = as will a competent groovin' drummer manning the stix. Believe me the = difference can be like night and day.

that being said I would love to hear more as you experiment with = placement...could be the beginnings of a very informative thread

:)

Don

"Brandon" <a@a.com> wrote in message news:459d2b99@linux...

First off get that 414 off the blanket and floating in the air = somewhere near the kik drum....position to taste

OK

as for the snare, tighten the snares and add a bit of dampening to = kill the ring a bit...you could also retune to the desired sound and = adjust the dampening to taste

Snares are tight.. I will try retuning it though.

Try putting the OH's at your position as the = drummer...approximately shoulder width and at least a foot above your = head (to start with) then try some experimenting with aiming...you may = even want to lower the mics above the respective toms ie: split the racs = and aiming slightly at the snare and then the other mic over the Floor = and then adjust their height to get the cymbals.

I was going to try just that next.

Just a few variations on a theme here

DOn

"Brandon" <a@a.com> wrote in message news:459cf9fb@linux...
<http://saqqararecords.com/MiscAudio/BrandonGoodwinDrumMix.mp3>

All,

Happy New Year!!

This is my 1st attempt at a live drum recording.

I have always used Drumagog and electronic samples in the past.

This is a cheap TAMA kit setup with....

Kick =3D open front

Snare =3D Steel (I dont know maybe 5 or 6 inch deep N'Dugu =
signature series)

Zildgen =3D Dark crash, Dark Ride, Dark HiHat

Tom =3D 11 or 12 inch with bottom head

Floor Tom =3D without bottom head

1 - AKG414 in Cardioid w/20db pad laying on blanket inside the =
Kick.

1 - SM57 in the usual spot on the top of the snare.

2 - Matched pair Rode NT5s in a XY stereo configuration...3 feet =
above the cymbals centered between the Ride and the Crash...directly =
above the Tom.

I applied EQ and compression to the Kick and Snare tracks. The = compression is a typical

3.99:1 ratio with 20ms attack and 50ms release. Using Waves C1 = compressor.

Also I applied a PARIS Gate on both tracks.

I scooped out the lows and mids of the OHs just allowing the = meat of the snare back in.

I gave a couple db to the highs and compressed it using the same = settings as on the other tracks, but with a 26ms attack.

I then mixed all the tracks together to taste.

The room was very live...hardwood floors and vaulted ceiling.

No attempt at Isolation.

I am pleased with the seemingly even cymbals/hat.

The Kick doesnt quite have the snap I would like, but I was = using a felt beater. Also my technique SUCKs...Can you hear the beater = roll on the head?

I leave the beater up after I kick which greatly reduces punch = of the kick.

The snare I am not pleased with. I really dont like the snare = itself. Dont like its sound. This snare actually sounds better tuned = like a piccalo.

Critques are very Welcome!!

Thanks Again!

Brandon

!!Gene,

History will probably bear out a few "subtle" differences between Bush and Caligula

:~)

Hoov

Hope it was a good tour for you! I for one expect to be using PARIS for as long as the hardware holds out. I'm also planning to keep my Prophet T8 and my Chroma (and my Fizmo, SY-99, Z1, Microwave XT, etc, etc) going along with it! None of them are made any more either, but like PARIS, nothing else works or sounds quite like them. :-)

In a word, no. ;-) I do use other programs (Digital Performer, Logic, Live, etc) for other purposes, but IMHO in the studio, nothing beats PARIS...

Interesting thought about "viability" though. There was a while there when it seemed that you had to have some kind of PT system just to have people look your way. Personally, I think that time is over, and people are more interested in what actually comes out of your studio instead of what's in it...

Doug

OK, I admit it, I cheat to get that sound - Toontrack and Scarbee are my
friends. And for those big film score drums, I use Storm Drum... (Links at
my <http://www.softsampling.com> site.)

Doug (And what's wrong with cranking the EQ anyway?)

<http://www.parisfaqs.com>right on, you should have some goodies at the 2nd addy now.
Thanks man, may you find some use in that stuff!
AA

First thing I'd do is get that 414 out of the kick before you warp the =
diaphragm in it. Replace with a good Audix D6 or Shure Beta52. =20

If it's a cheap Tama kit (older swingstar, right?), that is probably =
the lack of sub-lows I'm hearing in the kick. The 52 will shine here. =
Make sure it's on a stand inside the drum, pointed right at the beater. =
Do 'not' place it in the center of the shell or it will have phase =
issues, rather just a little bit to the left or right and angled so as =
to point at the beater impact point. Some guys prefer to put it very =
very close to the batter head, some prefer to get some shell tone and =
back it almost all the way out of the kick drum. Experiment my bro, =
learning is good.=20

Snare.... spend a little more time in tuning it, and maybe pick up a =
little MoonGel for the top head. I'm hearing just a bit more metallic =
ring in the snare. Put a good coated/fiber head on the top, medium =
thickness on the snare head side. I use Fiberskin on my metals, or =
Aquarian.=20

"Brandon" <a@a.com> wrote in message news:459cf9fb@linux...
<http://saqqararecords.com/MiscAudio/BrandonGoodwinDrumMix.mp3>

All,

Happy New Year!!

This is my 1st attempt at a live drum recording.

I have always used Drumagog and electronic samples in the past.

This is a cheap TAMA kit setup with....

Kick =3D open front

Snare =3D Steel (I dont know maybe 5 or 6 inch deep N'Dugu signature =
series)

Zildgen =3D Dark crash, Dark Ride, Dark HiHat

Tom =3D 11 or 12 inch with bottom head

Floor Tom =3D without bottom head

1 - AKG414 in Cardioid w/20db pad laying on blanket inside the Kick.

1 - SM57 in the usual spot on the top of the snare.

2 - Matched pair Rode NT5s in a XY stereo configuration...3 feet above = the cymbals centered between the Ride and the Crash...directly above the = Tom.

I applied EQ and compression to the Kick and Snare tracks. The = compression is a typical

3.99:1 ratio with 20ms attack and 50ms release. Using Waves C1 = compressor.

Also I applied a PARIS Gate on both tracks.

I scooped out the lows and mids of the OHs just allowing the meat of = the snare back in.

I gave a couple db to the highs and compressed it using the same = settings as on the other tracks, but with a 26ms attack.

I then mixed all the tracks together to taste.

The room was very live...hardwood floors and vaulted ceiling.

No attempt at Isolation.

I am pleased with the seemingly even cymbals/hat.

The Kick doesnt quite have the snap I would like, but I was using a = felt beater. Also my technique SUCKs...Can you hear the beater roll on =

the head?

I leave the beater up after I kick which greatly reduces punch of the = kick.

The snare I am not pleased with. I really dont like the snare itself. = Dont like its sound. This snare actually sounds better tuned like a = piccalo.

Critiques are very Welcome!!

Thanks Again!

Brandon

-----=_NextPart_000_0066_01C73000.21C28D40--Yeah, Doug! You said...

"Interesting thought about "viability" though. There was a while there when
it seemed that you had to have some kind of PT system just to have people
look your way. Personally, I think that time is over, and people are more
interested in what actually comes out of your studio instead of what's in
it..."

Absolutely--in fact, the more a client "demands" ProTools, the less likely
I will enjoy working with them anyway....

I would have to say no as the kit as you've recorded it must be dealt with as a single instrument and as such any EQ-ing will be totally dependent on the drums themselves. As for Compression...that would be dependent on the kit and the mix...I usually put a bit on the snare and kik just to tame the transients but as for a 2 buss comp on the kit...hmmm, sometimes it works, sometimes it doesn't

Sorry I couldn't be specific

Don

"Brandon" <a@a.com> wrote in message news:459d3834@linux...

Don ...do you have any suggestions on the mixing technique?...EQ or compression??

--=20

Thanks,

Brandon=20

"Don Nafe" <dnafe@magma.ca> wrote in message news:459d34fb@linux...

Another very important point which you alluded to are the drums themselves and without a doubt the player. =20

Having a good sounding kit will make the process much more enjoyable as will a competent groovin' drummer manning the sticks. Believe me the difference can be like night and day.

that being said I would love to hear more as you experiment with placement...could be the beginnings of a very informative thread

:)

Don

"Brandon" <a@a.com> wrote in message news:459d2b99@linux...

First off get that 414 off the blanket and floating in the air somewhere near the kick drum....position to taste

OK

as for the snare, tighten the snares and add a bit of dampening = to kill the ring a bit...you could also retune to the desired sound and = adjust the dampening to taste

Snares are tight.. I will try retuning it though.

Try putting the OH's at your position as the = drummer...approximately shoulder width and at least a foot above your = head (to start with) then try some experimenting with aiming...you may = even want to lower the mics above the respective toms ie: split the rcs = and aiming slightly at the snare and then the other mic over the Floor = and then adjust their height to get the cymbals.

I was going to try just that next.

Just a few variations on a theme here

Silly as it may seem... If you're talking about the 1/4" jacks, I occasionally use one of those rifle cleaning brushes with a bit of WD-40 followed by a pass with one of those little pieces of cotton cloth. I think they call the cloth a "patch" and the rod that holds the piece of cotton cloth a "patch loop", which makes the synth programmer in me grin... (Make sure to use a patch loop and not a jag, otherwise it'll be hard to get the cloth back out!)

I don't know what jacks the Mackie uses, but for really bad problems, I've been known to open up the cover and use an auto ignition point file on

certain things... :-)

Doug (Point files aren't useful for all that much else any more...)

<http://www.parisfaqs.com>You're probably going to need a software utility to access the Mac drive from

Windows, unless they used FAT32 format on the Mac side (not likely).

Mac Opener can do it for \$59. Here's a link:

<http://www.dataviz.com/products/macopener/index.html>

Best of luck!

Mark

But WHINING about giving me a refund is a no-no, especially when they misrepresented what the product was capable of doing... in that case there should've been no whining, it should've been more like: "You know what, Neil, I fucked up, let me offer to cover the shipping for you to send it back, as well".

>But the real problem I had was the 'Why doesn't this just fucking work' thing.

Only because I WAS TOLD it would 'fucking work' - I have no problem if I elect to take my chances & embark on attempting to make a DAW work underwater or teach a midget to play goalie for the Maple Leafs or some other kind of unnatural act. I'm not naive, but I do tend to trust people who are representing a product when they say will do a certain thing. I guess I figure that they should know all about the product they're selling... in most industries if you don't, yer fuckt. I guess if we as pro audio consumers continue to accept mediocre salespeople who don't know their product and I'm the only one that bitches about it, then I guess we all get what we deserve - an ongoing churn of people who are less than knowledgeable than they should be - or flat out & out misrepresent stuff without penalty.

>it's
>like a novice guitarist buying a strat and complaining he doesn't sound like

>it doesn't fucking work. I don't sound anything more like Hendrix. So, do
>I need to get a Marshall too or does this strat just suck?' Exaggeration,
>yes, but at the core it's the same thing.

Not a good analogy to my situation, because in your example the dialogue between the purchaser & the sales clerk at the store did not go something like:

PURCH: "Will this Strat make me sound just like Jimi Hendrix,

and if so, do I need anything else like a Marshall, for example,
in order to accomplish this?"
tell the purchaser: "this

CLERK: "Yes, it will, in fact, make you sound just like Hendrix,
and no you don't need a Marshall, or for that matter, an amp of
any kind, nor anything else from my store in order for you to do
so."

NeilWas it just a dream I had?

Doug

<http://www.parisfaqs.com>I think anyone in the NY tri-state area might want to go check this out.

I'm gonna get me some designer hats!!

Why yes, I do... in fact, he's standing over there next to the "Sy Fills " (first page, then scroll down to the Auction Notes).

Lots of interesting stuff there, I guesss - it's kinda like walking into a state-of-the-art studio, circa 1989.

What I want to know is: WHERE ARE ALL THE c-12's AND ELA-M251's THAT I CAN SNAG FOR LIKE \$400???? :)

Sad thing is, if you look at this note...
**Pursuant to a N.J. Superior Court Order (Warehouseman's Lien)*
...it looks like they're going to lose all this stuff just because they didn't pay their storage rental fees.

NeilThere are a couple of Distressors and an ADL 1000 that wouldn't kill me to have here.

;o)

How about with an SBS expansion chassis?
Both?

Looking for answers pretty quickly, very good deal came up and I'm thinking about jumping on it if anyone can tell this is a go for them.

AAThat's her touring gear. Probably all so obsolete and in need of repair that the warehouse bills exceed the cost of bailing it out and getting it operational again. Most of that stuff can be replaced by a laptop and software nowadays.

I wouldn't mind having that Hammond/Leslie combo.

;o)

>chrisl@adkproaudio.comHey Doug, how's my old T8 doing? I might be able to visit her in a week or so.

Speaking of analog, guess what I'm looking at right now...

A Buchla System 101 (my best guess, there's no model number on it). Looks like it has the Model 212 Dodecamodule, Model 258 Dual Oscillator module, and Model 217 Multiple Touch Controlled Voltage Source.

Cheers,
-Jamie

>Brandon, posted the other two files yu sent & shot you an e-mail with the links... personally, I like this one the best:

<http://saqqararecords.com/MiscAudio/BGoodwin-b52-3in2beater&plasticbeater.mp3>

The snare seems to have more body to it & the whole kit a bit more life in general than this one:

<http://www.saqqararecords.com/MiscAudio/BGoodwin-b52-3in&hardbeat&retunesnare.mp3>

(which I know you said is the one you liked best, but I guess it's a personal taste thing)

But I mostly wanted you to know that none of these clips are a fair comparison, since you're not playing the exact same riffs in the exact same tempo & with the exact same striking force on each & every hit in each of the three clips.

<evil grin>

Seriously, though, IMNSFHO, none of the last three suck - in fact, either of them could be eminently useable, depending on the context & the genre of the music... and when I say "useable" I don't necessarily mean "dialed-in & ready to RAWK", I mean: "a very good starting point from which to begin to tweak". Gotta remember, it's often easier to make drums sound good by themselves than it is to make them work in the context of whatever you're mixing (otherwise, would guys with shitoads of Grammys on their walls be endorsing Drumagog, and would there even BE a software app called "Sound Replacer"?).

One question, though - you said you had your snare mic "in the usual position"? I don't know what that means... IME, there IS no "usual position" every snare sound has it's own needs & snare is one of the instruments (Don looks at the kit as a single instrument, I look at it as a bunch of individual instruments that have to work together in a very specific manner - like a string section, for example) wherein a VERY SLIGHT move of the mic can make an ENORMOUS difference in the sound you get... a half-inch can make the difference between "thwump" and "BANG!"

Anyway, looks like you got some good advice from Aaron & others, I think the moon gel helped that particular kit, and switching kick mics made a big diff. Those sound good - I've

heard a lot worse.... you're ready to go, dude; you've got a good starting point... bring someone in there & start tracking!

Hey Gene,
What about a burnishing brush or injectors for TTL patchbays?
What's the proven method. Mine are 5 years old and starting to talk =
back.

I found this. Is it good?
http://www.globalvideoconf.com/Page_219.pdf

Should I use Deoxit and the brush and be done with it?
Thanks,
Tom

I use a burnisher and an injector. You need to be very light handed with a burnisher and only use it a few times over the entire life of the patchbay, but they do a good job. A quick twist with a burnisher once every year or so followed by some DEOXIT, is the best method I know. The problem is usually the normals, which are not addressed by burnishing and are closed tight when you spray. An injector can help somewhat, but if you have noisy normals, you need to clean the bay by hand :-(
I also insert and twist. (No comments please.)
GeneThe Broadway Musical Props are just plain creepy.

ADK Pro Audio
(859) 635-5762
www.adkproaudio.com
chrisl@adkproaudio.com I have a lovely old H.N. White "King" horn that you could get for about half that. It needs a basic cleanup and maybe an adjustment or two as far as I can tell, being a guitar player and all.
