Scott,

In XP crazy stuff happens to most people with two ADATs
in either Mec. I had to put one in A and one in B. This might
also be one of your problems.

Tom

>>Hey all,

I've been looking for a new audio interface, as my Aardvark Q10 has no continuing driver support. I'm kind of out of the loop these days, but a friend suggested that since I'm a SX boy and Yamaha is pimping SX as the best software for use with mLAN products, that the 01X might be a good idea.

<http://www.zzounds.com/item--YAM01X>

Any experiences, good or bad? I don't think I'd be using the mixer much, it would mostly just be an audio interface and a remote control device.

Thanks,

TCBThe nice thing about hammerhead is you can do 505 type simple kick snare beats, but it outputs that neatly edited bar already perfect size for paris

"Neil" <OIUOIU@OIU.com> wrote:

>Thad, I shopped for a new audio setup about 1 1/2 yrs ago, and here was what I went through...

The O1X looked nice, but the small faders were a deal breaker for me. Also, there was no fader expansion pack at the time (not sure about today). I didn't get a chance to hear it or play with it.

I bought the Tascam 1884 and had some major issues with it. The driver barely worked (which I here is much better now) and the converters weren't stellar.

The implementation as a mackie control in Cubase was also poor. Finally, the lack of true scribble strips were a deal breaker. I tried the on screen "vital strips" and couldn't get used to them.

I wound up taking it back and getting a Emu 1820M and Mackie control. I am starting to sound like a broken record with all my 1820M pimping, but it is that good. Stellar converters/clock, and stellar mic pres. If I had anything bad to say about it, it would be the mixer/router interface takes a little getting use to, and the FX are mostly utilitarian (with a few nice surprises). Also, you can upgrade it to Emulator X soft synth for \$100, which might be mandatory given your background ;-)

-Chris
