ferred going 16 bit all the way in PARIS. So he wasn't dithering really. I like to track at 24 bit for the simple and largely unforgivable reason that I think it lets me be a little bit sloppier with levels. That is, at 16 bit I really want to be getting right up there at 0 dbfs on the converter, where with 24 bit files I think I can go a little easier and add gain later on.

Spent all last night tracking acoustic guitars. Used a borrowed auditorium sized Martin on three tunes. Used the Claytor you sold me, and an SE ribbon. The Claytor went through the Langevin DVC and the ribbon through the Sytek (quiet guitar, the DVC didn't have enough gain with the ribbon unless it was stuck right on top of the sound hole) and then into the linen inputs on a Presonus firewire box. I was astonished at how good everything sounded once we got the mics in the right spots. I really think all of the 16 vs. 24 bit and higher sample rates is not important for 85-90 percent of the people recording out there. I think better/smarter mic choices and pres make far more difference. But I'm recording in a closet next to a garage, so obviously I'm going to think like that.

Nice mix! Felt it, rock'd to it (or should I say I was bobbin' my head). Very full sound. All players did a great job.

> far more difference.

It's like I've been saying on & off in other threads for awhile  
now - it's not about ONE thing making an amazing difference...  
the more I work with digital, the more I realize it's all about  
incremental gains at various stages of production. So, you're  
obviously right about the mics & pres making a difference in  
terms of picking the right combination for the sound you're  
trying to get, but it IS also about wordlengths & samplerates  
& using plugins that process well, instead of adding  
undesireable artifacts, and whether to dither or not to dither,  
etc, etc, as well.

IOW, is a 16-bit, 44.1k truncated mix going to automatically  
sound like shit vs a 24-bit 88.2k or 96k recording that was  
dithered upon mixdown or mastering? I'm not saying that's  
a "gimme" that it will - i'm just saying that each of those  
factors contributes to something that's "a little bit better"  
at each stage of the process.

Neil There are NO Mac cracks for Paris AFAIK

anyone.  
That's the official word.

That DVD was a lot of work, but it was a love labor on my part and frankly all I cared about was to cover my expenses, help fund the Skunkworks effort and the side bonus was the ultra cool hang time with BT. Brian wouldn't take a dime, and his gift was his time/knowledge in case anyone didn't know. He is truly a great dude. After all this time I just couldn't see charging for a dead platform how to video that was years old to boot. I don't see a new one being made at this point, so there is nothing to update. Maybe someday "soon" will come, but I'm not holding my breath.

Copy on with my blessings, Paris users. I saw this day coming, that's why I didn't protect it.

AABrian tracked to 16.. but he mixed to 24.

Just a thought, theres a website I think that offers free file hosting of files up to 100mb. If the image of this DVD is larger than 100mb, you can use winrar to rar up the files into many 100mb files making up the archive of the entire image. Anyways, if someone wants to send me a copy of the DVD image I will be more than happy to post it to a free file hosting website and post the link here along with a .txt file with the image stating that donations are appreciated and I would put in the paypal account of the writers.

It's always worth sharing, but at the same time, those who benefit from the product should donate and show their appreciation.

Sincerely,

Johnny Blaze

I'd be surprise if it were true. Apple sells a lot of their priciest  
hardware based on having production-ready software available. It makes  
the Mac a viable platform for the media production market, a market  
where people spend for speed. Jobs is also into that market from other  
angles, with Pixar and as a distributor of content via iTunes. It all  
fits together.

But if it were true, i

[http://provideocoalition.com/index.php/fcapria/story/apple\\_a\\_vid\\_and\\_nab/](http://provideocoalition.com/index.php/fcapria/story/apple_a_vid_and_nab/)

and another from the same author, though earlier last year:

<http://www.capria.tv/2007/09/21/apple-looking-to-sell-proapps-division-probably-not/>

It may just be fueled, or even originated simply on Apple's (then rumored, now confirmed) pull out from NAB (which likely means nothing in and of itself).

I could see it from a pure business standpoint in that Apple's mainstay really is products like the iPod, iTunes, iPhone, etc. The pro market is a boost in reputation, but likely doesn't compare to iTunes sales. However, as you noted, Apple is about selling a package, and to split a pro package doesn't make sense on its' own. Rumors are what they are - rumors. ;-)

>NeilJamie are you a scientist? From what theories or rather maybe fantasies do you concoct your "scientific", and I use the term loosely, rantings. It is the height of narcissistic paranoia and ignorance to claim global warming is irrefutably anthropogenic. There is no consensus among all scientists, that is a fact. There is only a consensus among those who would like to shove their ideology and mantra and polemic down the throats of those who disagree. There is only a consensus that there is no consensus.

Michael Crichton said it best:

"Historically, the claim of consensus has been the first refuge of scoundrels; it is a way to avoid debate by claiming that the matter is already settled. Whenever you hear the consensus of scientists agrees on something or other, reach for your wallet, because you're being had.

"Let's be clear: the work of science has nothing whatever to do with consensus.

"Consensus is the business of politics. Science, on the contrary, requires only one investigator who happens to be right, which means that he or she has results that are verifiable by reference to the real world. In science consensus is irrelevant. What is relevant is reproducible results. The greatest scientists in history are great precisely because they broke with the consensus."

>yes I agree with all that too..But still not exactly my point.

Hmm..ok, what I mean is we make cd's to evaluate mixes and pass around to band and manager..but if we are making changes in the mix that may be more related to

the CD itself than the 24 bit mix the Mastering guys is gonna get...we can go in circles forever. What I should do is I guess open up a mix listening project in Paris..bring the 16 bit files in there and listen there..just to test it..and AB them next to the 24 bit un-ditherd files.

Also not talking about mixes translating outside my room..that would most

likely be bad room acoustics..mixing too loud whatever. I know I have those issues and so it;s been in every studio with every producer I have ever worked with. Never 100% satisfied with mix translation.

Also curios if dithering makes no difference..why are the so many noise shaping choises?

I was even thinking of hooking my ole Panasonic 3700 up to listen back to a DAT in my room..

I just want to make sure I am making adjustments to bass and drum levels for the right reasons..will do some A/B tests..we are going to try running mixes through the 1/4" inputs of my BAE312s and test em against goin into the mic inputs via Avedis' line pads..gould be too much transformer color. Also the BAE's gain knobs are not stepped so could be that the stereo image is off.

Although..it aint when listening in Paris.

>Many times there is some truth to the rumors. I see through the anti Mac  
bias in this article of minimizing Apples importance to NAB, and the kool-Aid  
comment and the employees are getting ready to abandon ship stuff, also a  
bit of a bash of FCP, which makes me suspicious. There are people that still  
want to belittle Apple as being a toy company with their mickey mouse computers,  
not a serious computer company. At the same time this article could be  
true.

I don't know why Apple would do this, it's not like they need the money,  
but if they are losing money, I guess they would sell. So will they sell  
off QuickTime also? Unfortunately many times these rumors end up being true.  
Apple has been making moves that are geared towards consumer products.

Apple did stop development on Claris Works (Apple Works). Apple did spin off FileMaker Pro, Apple also damaged iMovie by dumbing it down, so anything is possible. I guess it's time to buy the latest versions of FCP and Logic before the prices go way up.

>Yes, very off topic, sorry bout that. But I just saw a documentary of the  
british punk scene the other day, and they started with the original London  
Calling track, and switched to a live recording of the same song. Much less  
reverb, and it sounded much better (in my opinion).  
The Springsteen-track is breaking every rule in use of reverb in modern  
music. A long, loud reverb-tail that mashes into the background vocals. And  
it works just fine.  
(And I think I'll have to get one of those Masterlink thingies :-)

>Well, did some A/B tests this afternoon...Same mix run 4 ways  
1 into my 312 via the mic input at 16 bits truncated in Paris  
2 into my 312 via the mic input at 24 Bits dithered cool edit  
3 Into 312 by the 1/4" input 24 Bits dithered cool edit  
4 Into 312 by the 1/4" input 16 bits truncated in Paris

First off the big difference is that the input transformer seemed to be the culprit on some of the haze..the mixes into the 1/4" input were much bigger more open and 3d! with better stereo separation..The other way did have a cool tape saturation type of thing going on..but too much..I'll speak to Avedis about this. We even asked my wife to come in and listen to the 2 mixes without telling her what was different..she nailed it with the second one has more air to it.

Weird thing about this is that I got the Avedis line pads a few weeks ago and really didn't notice the haze till listening back to a compiled CD. Lesson learned..test out gear first. the Avedis pads may work great on his MA5's though

Secondly the dithering was definitely audible but way more subtle. The truncated mixes seemed a tiny bit louder and the cymbals were more open...less hashy.

I don't know if I could pick that out on its own but with the AB test..both of us working on the mix could tell. So from now on I'll bounce my test mixes at 16 even though it takes longer.

Rich Lamanna wrote:

> Jamie are you a scientist?

No, although I have some scientific education and plenty of curiosity  
about many things.

How about you?

> From what theories or rather maybe fantasies do

> you concoct your "scientific", and I use the term loosely, rantings.

Heh. Rantings. Fantasies. Concoct. Nice. :^)

I now concede that you are right about everything and have now put me in my place. ;^)

> It is

> the height of narcissistic paranoia and ignorance to claim global warming is

> irrefutably anthropogenic.

If you actually read my "rantings" you'll see that I agree with the consensus, which is that the scientific evidence shows a strong possibility that we are contributing to the current climate change event.

There's no narcissistic paranoia and ignorance there. Maybe you're projecting. Or maybe you have me confused with someone else.

Ignorance would be to ignore the entire breadth of scientific evidence (a hallmark of many denialists).

Paranoia would be, for example, to think that the only reason for policy changes is to transfer wealth from the USA to third world countries (seems to be one of the main fears of some denialists).

Narcissism would be to prioritize the short term profits of a few companies over the long term benefit of everyone (possibly why certain fossil fuel companies fund denialist FUD).

> There is no consensus among all scientists, that

> is a fact.

If your plan is to wait for ALL scientists to agree about everything, you will wait forever.

I haven't heard anyone claim that the consensus on climate change means that every scientist agrees. Science is always full of disagreement on various levels. Which leads to more research, generally leading to more certainty, but rarely 100% agreement.

Where we are now is at a point where the overall evidence shows a strong possibility for human contribution to the current climate change event.

If you want to count up who agrees with that, you'll find that it includes most of the scientific organizations around the world. And even, at this point, major parts of the fossil fuels industry such as Shell and BP.

> There is only a consensus among those who would like to shove  
> their ideology and mantra and polemic down the throats of those who  
> disagree. There is only a consensus that there is no consensus.

That's the main meme of the lobbying effort, to "teach the controversy."  
It's a distraction from decades of research that already exists.

I've seen plenty of "polemic" style of debate from denialists. Although  
I'll grant you there is some of that from some of the more strident  
environmental organizations.

As far as ideology goes, none of that matters to the physical processes  
being studied. What matters, in studying what's \_actually happening\_, is  
the data.

Ideology is more appropriately considered in the solutions debate, as  
part of the pesky political side of that.

> Michael Crichton said it best:

Michael Chrichton is not a scientist. Now why would you believe him  
instead of me? :^)

Or better yet, why would you believe him instead of the National Science  
Foundation or the long list of other mainstream scientific organizations?

Could it be your own confirmation bias that prevents you from looking at  
ALL the evidence?

> "Historically, the claim of consensus has been the first refuge of  
> scoundrels;

Actually, the claim of "controversy" is a better candidate as the first  
refuge of scoundrels.

For example the Tobacco industry used that exact same delaying tactic by  
denying the demonstrated health hazards of smoking. They attacked  
research, amplified contrarian views and spread money around to keep the  
FUD going.

> it is a way to avoid debate by claiming that the matter is  
> already settled. Whenever you hear the consensus of scientists agrees on  
> something or other, reach for your wallet, because you're being had.

Yes, right, absolutely. LOL!

The discovery of microbes as a source of disease, and the effort to get doctors to wash their hands in hospitals, was a horrible attempt to steal from the public. Not.

The ozone layer consensus and change in policy to keep from losing our protection from UV radiation was a mere grab for your money. Not.

Also, what's with this whole gravity thing? Obviously a clever con by those evil, evil scientists. Heh.

Chrichton is not making much sense here. He's overreaching.

And BTW scientists do not deserve such general vilification.

> "Let's be clear: the work of science has nothing whatever to do with  
> consensus.

In fact, science is a process of posing hypotheses and testing them. And then testing the results. Of course this creates consensus and a body of knowledge that has survived repeated testing.

If there were no consensus on how processes work, airplanes would not fly.

> "Consensus is the business of politics. Science, on the contrary, requires  
> only one investigator who happens to be right, which means that he or she  
> has results that are verifiable by reference to the real world. In science  
> consensus is irrelevant.

He's redefining words to suit his purpose. In science, consensus is the result of testing and evidence. And it never implies that there is zero disagreement.

> What is relevant is reproducible results. The  
> greatest scientists in history are great precisely because they broke with  
> the consensus."  
> <http://www.globalwarmingskeptics.info/>

What he's saying is that consensus can be wrong. This is correct but he draws the wrong conclusion from it.

For example, it was wrong when the consensus was based on an interpretation of Catholicism that claimed earth had to be the center of

the universe. Contrary evidence was available at the time (1616) but those in power felt the truth threatened the Catholic church, and so it was repressed. The Pope didn't come around until 1992!

From:

<http://query.nytimes.com/gst/fullpage.html?res=9E0CE1DA1F31F 932A35752C1A964958260>

"Moving formally to rectify a wrong, Pope John Paul II acknowledged in a speech today that the Roman Catholic Church had erred in condemning Galileo 359 years ago for asserting that the Earth revolves around the Sun.

The address by the Pope before the Pontifical Academy of Sciences closed a 13-year investigation into the Church's condemnation of Galileo in 1633, one of history's most notorious conflicts between faith and science. Galileo was forced to recant his scientific findings to avoid being burned at the stake and spent the remaining eight years of his life under house arrest.

John Paul said the theologians who condemned Galileo did not recognize the formal distinction between the Bible and its interpretation.

"This led them unduly to transpose into the realm of the doctrine of the faith, a question which in fact pertained to scientific investigation."

Back to the climate change topic: The consensus \_used to be\_ that we could pump greenhouse gases into the atmosphere as much as we want with no repercussions to the climate system.

It now looks like THAT consensus was wrong, based on the evidence. And because of the compelling evidence for human contribution to the current climate change event, the consensus has changed.

And yet Chrichton missed this latest validation of the one thing he's right about (so far, from your quotes).

Ironic...

> In an article published in the Wall Street Journal

Science central.

> Prof. Lindzen, Alfred P.

> was a contributor to Chapter 4 of the "IPCC Second Assessment"

> <http://www.opinionjournal.com/extra/?id=110008220>

First, scientists ought not be intimidated merely because they hold a particular theory. But any theory has to stand up on its own feet.

If you want to talk about intimidation of scientists, you don't have to look too hard to find the opposite complaint. Scientists claiming to have been attacked for political reasons, reports edited by non-scientist political appointees to water down the conclusions, that sort of thing. As long as you're looking for a conspiracy against scientists, look into that one, too.

BTW, Lindzen is one of the most well known and oft quoted contrarians on climate change. You're welcome to agree with him, but you should know that most climate scientists do not, based on the evidence. Opposite of the assertion of his article, Lindzen hasn't been "intimidated" into silence about his position. And obviously he wasn't shut out of IPCC participation.

> Here's a little pattern called the Milankovich Variation, which can explain  
> the variations in ice ages every 100,000 and 400,000 years.  
> [http://www.space.com/scienceastronomy/planetearth/iceage\\_orbit\\_wg.html](http://www.space.com/scienceastronomy/planetearth/iceage_orbit_wg.html)

"A little pattern" - good one. :^) The Milankovich Variation is a long term pattern in terms of human life spans. It is one of many factors climate scientists look at when considering what is happening now.

The MV doesn't explain the current climate change event. But if you want to talk about when the next ice age may be coming, the MV could be a factor. We may want to save some of our fossil fuels so that 50,000 years from now our descendants can burn them to counter the Milankovich Variation with some good old anthropogenic global warming. :^)

<http://www.ncdc.noaa.gov/paleo/milankovitch.html>

"Astronomical calculations show that 65N summer insolation should increase gradually over the next 25,000 years, and that no 65N summer insolation declines sufficient to cause an ice age are expected in the next 50,000 - 100,000 years ( Hollan 2000, Berger 2002)."

> An interesting and complicated discussion by regarding a letter published in

Interesting. The disputes between McIntyre and Mann go back a few years.

But if this is really about questioning the "hockey stick" graph, then read:

<http://www.realclimate.org/index.php?p=11>

> Here's some more cherry picked info for ya Jamie.

You oughta make a pie! ;^)

> Oh, excuse me it was

> written by a conservative congressman. It must be suspect! Oh and worse yet,

> he's optimistic. What a stooge.

> [http://archive.newsmax.com/archives/articles/2001/6/13/19052\\_2.shtml](http://archive.newsmax.com/archives/articles/2001/6/13/19052_2.shtml)

That was a fun read. :^)

First, after the missile stuff, he confuses CO<sub>2</sub> output with other forms of pollution. Weird. The rest of his attempted scientific arguments seems to have a similar uniformed grasp on the science. The most accurate statement in his rambling discourse is "I do not know."

Second, he's defending Bush for denying human contributions to the current climate change event. But in 2001, Bush himself said this:

<http://www.whitehouse.gov/news/releases/2001/06/20010611-2.html>  
"The issue of climate change respects no border. Its effects cannot be reined in by an army nor advanced by any ideology. Climate change, with its potential to impact every corner of the world, is an issue that must be addressed by the world."

"My Cabinet-level working group has met regularly for the last 10 weeks to review the most recent, most accurate, and most comprehensive science. They have heard from scientists offering a wide spectrum of views. They have reviewed the facts, and they have listened to many theories and suppositions. The working group asked the highly-respected National Academy of Sciences to provide us the most up-to-date information about what is known and about what is not known on the science of climate change.

First, we know the surface temperature of the earth is warming. It has risen by .6 degrees Celsius over the past 100 years. There was a warming trend from the 1890s to the 1940s. Cooling from the 1940s to the 1970s. And then sharply rising temperatures from the 1970s to today.

There is a natural greenhouse effect that contributes to warming.

Greenhouse gases trap heat, and thus warm the earth because they prevent a significant proportion of infrared radiation from escaping into space. Concentration of greenhouse gases, especially CO<sub>2</sub>, have increased substantially since the beginning of the industrial revolution. And the National Academy of Sciences indicate that the increase is due in large part to human activity."

If you read on, you'll see that Bush's main objection to Kyoto was that China and India were treated differently than the USA:

"Our country, the United States is the world's largest emitter of manmade greenhouse gases. We account for almost 20 percent of the world's man-made greenhouse emissions. We also account for about one-quarter of the world's economic output. We recognize the responsibility to reduce our emissions. We also recognize the other part of the story -- that the rest of the world emits 80 percent of all greenhouse gases. And many of those emissions come from developing countries.

This is a challenge that requires a 100 percent effort; ours, and the rest of the world's. The world's second-largest emitter of greenhouse gases is China. Yet, China was entirely exempted from the requirements of the Kyoto Protocol.

India and Germany are among the top emitters. Yet, India was also exempt from Kyoto. These and other developing countries that are experiencing rapid growth face challenges in reducing their emissions without harming their economies. We want to work cooperatively with these countries in their efforts to reduce greenhouse emissions and maintain economic growth."

You could accuse Bush of dragging his feet on policy. But based on his speech you can't say he's denying the current climate change event or the strong chance that we are contributing to it. He listens to the National Academy of Sciences, something you might consider.

From: <http://nationalacademies.org/onpi/06072005.pdf>

"Climate change is real  
There will always be uncertainty in understanding a system as complex as significant global warming is occurring<sup>1</sup>.

The evidence comes from direct measurements of rising surface air temperatures and subsurface ocean temperatures and from phenomena such as increases in average global sea levels, retreating glaciers, and

changes to many physical and biological systems.

It is likely that most of the warming in recent decades can be attributed to human activities (IPCC 2001)<sup>2</sup>. This warming has already led to changes in the Earth's climate.

The existence of greenhouse gases in the atmosphere is vital to life on centigrade degrees lower than they are today. But human activities are well above pre-industrial levels.

Carbon dioxide levels have increased from 280 ppm in 1750 to over 375 measured (i.e. in the last 420,000 years). Increasing greenhouse gases approximately 0.6 centigrade degrees over the twentieth century.

The Intergovernmental Panel on Climate Change (IPCC) projected that the average global surface temperatures will continue to increase to between 1.4 centigrade degrees and 5.8 centigrade degrees above 1990 levels, by 2100."

Consider that.

> Just keeping it real,

"Real" means looking at ALL the evidence. Anything less is surreal.

Cheers,

>True - there was a bit of bashing to the article which doesn't help  
credibility. The only credibility it might have is that it's a video editor  
blog (I believe), but even that is suspect.

From a purely business standpoint, I can see it making sense - Apple really doesn't need FCP, Logic or the pro market to thrive, and may just see a way to streamline and do what they do even better, esp. if they are being chased by Thompson to buy it, rather than seeking to unload it. FCP is hardly a marginal success (more like a massive success) but that's how we would see it - to consumers it's pretty much an unknown (just as are Avid, Cubase, Quantel, ProTools, the idea of audio/video editing in general, etc).

When it comes to long term profitability most every company has to look at the larger consumer and hobby market as the pro market (as in audio/video production, not corp/business in general) is just way too small to make a ripple in the ocean of consumer and business sales. That's not a knock of the consumer products in the least - Apple has an impressive and highly successful line, and I'm not saying Mac Pros are "consumer" systems since they cover the bases from consumer to high end easily, where FCP just isn't a consumer app by any stretch, even FCLE is more than an average consumer needs.

Actually if Thompson/Grass Valley were to buy the division, I would kind of fear for Logic's future (not FCP's though), but that's one speculation built on top of a wild rumor, which is a bit like bull riding on a glacier. ;-))  
Fun to speculate, but hardly meaningful unless someone signs on the dotted

line and Apple prints it on the website's front page.

Regards,  
Dedric

>Totally agree, Neil, oddly enough I think we agree about this sort of thing more than we disagree. I 'went native' a long time ago and there's a massive penalty for me going to higher sample rates because I use a lot of software synths and native f/x. For me, 24 bit files at 44.1 sound really, really good and give me a lot of options for real time processing when it comes time to mix.

In a few years, we'll be using dual eight core processors (or more) and will forget the 'Great 44.1 v. 96k Debate' and we'll all use higher sample rates automatically, just like we now record to 24 bit files because we can and they give us an incremental improvement in sound quality.

Fun day of recording for me today, just loud distorted guitars. I used both my Savage and my Top Hat, no f/x, an SE ribbon and the Claytor you sold me, both about 12 inches off the speaker pointed straight at the cone a few inches from center, both mics went into the Langevin DVC. The amps were on a piano bench and in the sweetest spot in the room. Got all of the tracks for three songs in one day. Now that is a work rate I like!

Just like an exciter might do, in other words? I'm telling you, the truncation is adding distortion... try a different dither algo if you don't like the type of noise-shaping that the one in Cool Edit offers.

there's no option that I can find to route the click to a VST output. I did find this though:

[http://www.dehaupt.com/SynthEdit/DH\\_Metronome.htm](http://www.dehaupt.com/SynthEdit/DH_Metronome.htm)

Works like a charm, synce right up to Cubase and the tone is not obnoxious. I have some samples set for my metronome that I like to use, but these require the players to be hearing the mix off the stereo bus. I can do that, but it mixes the click back into the tracks that are being played (naturally) so it's impossible for each musician to have a separate control over click track level with the Cubase metronome. This VSTi can be routed to a mono track on my HDS-16/HRM-16 cue system and everyone can have a separate click level.

I wish I could load my own samples, but as I said, it doesn't totally suck."TCB" <nobody@ishere.com> wrote:

16-bit audio has 65,536 discrete steps to it... 24-bit has over 16 Million... that's a BIG difference in what even the most robust CPU's can handle, so yeah if you're using a lot of major stressors like softsynths/VSTi's, 16-bit makes more sense

in a lot of cases.... frankly, I'm amazed that we can even RUN  
30 or 40 tracks of 24-bit!

>In a few years, we'll be using dual eight core processors (or more) and  
will forget the 'Great 44.1 v. 96k Debate'

No, no, no, it's 44.1 vs 88.2... 96k is really unnecessary ;)

Interesting, because today I tried my first-ever recording  
of a ribbon mic on guitar... picked up a couple of those Nady  
\$69 ribbons on special at Guitar Center a few weeks ago & today  
we started setting up for another batch of songs with a band I  
did a demo for a few months ago - tried one of the ribbons  
through a couple of pre's & settled on the Grace 101 - then  
paired it with an Audix i5 through the Focusrite Red, which  
sounded enough like the ribbon/Grace combo to perhaps track it  
in "pseudo-stereo" that way. Those two combinations have some  
very similar characteristics, but are slightly different enough  
to provide a definite split image.

NeilHey Mike - thanks, glad you liked it... and yes, i did the  
vocals on that one, too.

 >BFD2 is really the best click track. You can just find some grooves that  
 work or build your own. It's pretty hard to find grooves that aren't  
 overplayed. The drummers who created the grooves like to embellish wayyyyyy  
 too much for most grooves to be useful as click tracks but it's possible to  
 DIY or edit an existing groove and loop it to get something straight ahead  
 and unembellished. I've located a company called Groovemonkey that makes some  
 killer grooves for BFD2. I like them much better than the grooves that come  
 with the program and it's stupid simple to just route the output to a mono  
 bus and you're good to go with a click.

I am thinking you should be able to use the Control Room just to send to a  
separate output buss even if you are monitoring/submixing headphone feeds  
externally or in Totalmix - just use it as a submixer for click.

Those two combinations have some very similar characteristics, but are slightly different enough to provide a definite split image.  
>  
>Neil

I picked up one of the Nady ribbons from DeeJ. They're really weird mics. My first start with guitar sounds in the 'Steve Albini Pair' approach. One dark mic (the ribbon) and one bright mic (the Claytor you sold me, the Baby Bottle you sold me, or a pencil condenser maybe), both about a foot off the speaker, very close to each other, pointed pretty close to the center of the speaker. I move things around from there. The thing about the Nady mics is that--at least the one I have-- is really dark. I read somewhere that they packed the capsule full of junk to keep them from breaking when some idiot blows in them to see if they're working. Can't confirm or deny this, but it makes a little sense considering how they sound.

TCBYeah, I did notice right off the bat that the Nady is a bit dark-ish, but it might work out OK for this, since it's your typical Mesa Triple-Rectumfryer shred tone. The rolloff of the mic takes off some of the "fizz".

Still gotta mess with placement a little more - we didn't have time yesterday to toy with that very much, but the guitarist liked what he heard right away... anyway, we'll see how it ends up working out. I noticed it has pretty good gain for a ribbon, though... didn't have the amp super-cranked, yet I

also didn't have to max out the gain on any of the preamps I tried it through - 36-40 db of gain on the pre gives a decent, useable level to record with, without the mic sounding too "driven". More than that & it sounds like you're kind of driving the mic too hard... at least in this particular application.

>I'm with you Cujo. Of course I almost always am :-)

Radio nowhere, while I enjoy the song, sounds to me like bruce doing the killers doing bruce. Of course my old bandmates disagree with me on that call, they like to refer to it as 8675309 nowhere.

I do drive my band mates a bit nutz with The Clash.  
Of course they all loved it when we got to work with Mikey Dread (who is  
not doing well right now)

Oh another great one from that time is The Jam's All Mod COns

Well, that's what it says in the manual. How are you setting it up? HI DeeJ,  
Two different way I do it.

1.

Go to Vst connections and VST Outputs. Open up the window enough to see  
the row that say click. on what ever stereo or mono bus channels you  
want to have the click track go out too.

Control the output level with total mix. The draw back is you can't  
control the click level other than globally in the metronome setup. But  
in general this work fine. Sense you can use these buses for audio such  
as headphone sends, etc you can pick and choose who hears the click.

2.

Using the control room can give you more volume control options but  
technically more limited in the number of channels you can send the  
click track too.

In my outputs setup this way. Using a fire face 800

analog 1/2 - main stereo bus to studio monitors

analog 3/4 - for misc external crap send/return

analog 5/6 control room studio 1 - to shitty PC monitors

analog 7/8 control room studio 2 - to home stereo system

analog 9/10 control phones out w/ click ON

You can use both these methods at once sense the control locks out those  
outputs. You can send a click track to every output your have if you are  
so inclined this way and with out total mix.

www.adkproaudio.com <<http://www.adkproaudio.com/>>

(859) 635-5762 Not knocking the Nady at all, it's a very decent mic for the (small) money.

There are some guys in the interweb who have mods for them to remove a bit of the muffling, but I haven't been that brave yet.

With the SE ribbon the gain has been dependent on the source. With a fairly loud guitar cab the DVC works great. With acoustic guitar or percussion (tambourines sound \_lovely\_ with it) I have to use the Syteks just because they have a lot more gain. I have to admit, I like the Syteks more and more as I use them. Simple design, really cheap on a 'per pre' basis, and they do a simple job very well. They make stuff louder. I might pick up two more so I have 12 channels all the time.

Anywho, good luck with the Nadys, I can see them sounding great on a shredding Mesa triple + cab setup. Plenty of high end there anyway, so the rolloff might help.

TCB

>just sayin'...I just read that Apple has a big press conference at the end of the month.  
They may be headed in a different direction. Apple has dropped FW from  
products. They dropped Computer from their name, which people thought they  
wanted to be thought of as a consumer products company. Fasten your seat  
belts, I have a feeling it's about to get bumpy.

Maybe all the time it took them to get Logic 8 out, took a toll on them.  
Once again, the big companies can sell a lot more stuff to the masses then they can to a few pro and semi pro musicians / video guys.

>Hey Neil,
```

Yeah, I don't have the firewire device yet (suppose to arrive today), but I just installed Cubase on my notebook (AMD Turion 64bit) and imported some wav's from my Paris... just wanted to play a little... to get a feel for Cubase. Well, I first ran into issues with converting from the Paris 24 bit. I normally use CoolEdit (older version). Of course, it brings Paris 24 bit files in as 32 bit. I am not sure why, but it does. But when I pulled up a converted 24 bit from Cubase, Cooledit started doing 24 bit. Don't ask.. cause I am clueless. However, I got my wav files finally converted to 24 bit properly and Cubase recognized them. It didn't like 32 bit files.

So I brought them into a new project. I had to do one wav at a time because Cubase would sometimes crash after I imported a new one. Not everytime. So I had to import it, save it, play it, close it, open it, re-play it... and hopefully didn't crash again. There were about 9 wav files for this one song I was playing with and it took hours to just get the wav files in and levels adjusted. Since I am not recording yet, ASIO isn't an option... and playback were just through the speakers... Oh, it crashed almost everytime on certain plugins.

Anyway, I don't have my notebook tweaked for audio yet, so perhaps that is some of the cause... but from my little experiment... I have real concerns for Cubase stability. I'll keep playing... and get it tweaked... maybe I'll have better luck. i was just wondering if others had Cubase Studio 4.0 issues...

the updates and it stopped crashing? Weird.

I am trying the downloaded trial version. I would assume that it is the

most stable one. But not on my machine. The Cubase LE comes with this Firewire device... I hope it is more stable than what I experienced with the trial version I downloaded.

few instances of people here complaining about Cubase being  
unstable - you can probably move forward with confidence.  
There was one version (beta) of the RME HDSP driver that both  
Deej & I had some issues with - that caused some aberrations  
with Cubase, but they cleared up with the driver rewrite/final  
version of it.

Let's put it this way... JohnB RAVES about Cubase & how stable  
it is - and he doesn't rave about ANYTHING.

:D

BTW, just curious - you're not running WinVista on your  
notebook, are you?

>Too early to really tell, James... so far, so good, though.  
Like I said, we just slapped one up about a foot away from the  
cabinet & ran it through one of the the Grace's & it sounded  
pretty good right off the bat. Tried a couple other pre's, but  
immediately went back to the Grace without even a debate.

Only tried it on the Mesa-shred tone so far... like I was  
telling Thad, the rolloff on the mic seems to take off a lot of  
the "fizz", so it might work out just fine for this application  
(basic trax on rhythm guitar, coupled with an i5 through the  
Mucusrite Red8)). I doubt i'll be able to use it for layering -  
might need something with a bit more edge for that so the whole  
thing doesn't turn into a murkfest (probably keep the i5 &

switch out the nady with a BLUE Ball & a guitar with P90's in it for layering stuff).

I used to do that with version 2 and 3 because VSTi would show up as a  
output option for the MIDI out option of the metronome settings. They  
don't seem to anymore with 4.0 So back to the normal click sadly.  
It would be nice to have that feature back.

;o)"Ed" <askme@email.com> wrote:  
>  
>Hey Chuck... are you saying your box version crashed, but then you downloaded  
>the updates and it stopped crashing? Weird.

yep, I did initially have a bunch of crashes and weird stuff with MIDI, but when I installed the updated app, and updated drivers for my MIA soundcard everything started gelling up right.

ChuckI don't expect Apple to exit the pro audio/video markets. Vertical integration has worked very well for them.

Back when I was writing for MacWEEK, Apple dropped out of NAMM one year. Which is to say they didn't have a booth. But they did have reps wandering around the show, and there were Macs in other booths. It didn't amount to them leaving the pro audio market.

So it's not unknown for them to skip having a booth at a major trade show. It may mean there are no big announcements this year for that market, no completely new products. And since Avid doesn't have a booth, there's less pressure for Apple to do so.

Announcements Apple had been rumored to make at NAB included a new descendant of Shake, a high end version of FCP, and the next Macbook Pro update. And maybe blu-ray support in DVD Studio Pro.

Shake's features are already making their way into Motion. I have doubts that there will be a "high-end" FCP - FCP itself just keeps getting better and better. Blu-ray support in DVD Studio Pro will probably will be added whenever Apple offers the option of Blu-ray drives on Macs. For those who need it, third party drives and burning software are out now.

The next Macbook Pro update will most likely be a typical quiet launch on a Tuesday (similar to the recent announcement of the updated iPhone and iPod Touch, and before that the announcement of new Mac Pros a few weeks before MacWorld Expo). That will probably happen within the next month or so. Expected changes include a slight speed bump, Penryn chip set, updated graphics, LED backlighting support in the 17", and a multi-touch trackpad like the Air.

The next Apple press conference is most likely about 3rd party developer support for the iPhone.

Switching from FW to USB on the iPod was probably a cost saving measure that also made it more accessible to more people. Not every computer has FW.

Not putting FW on the Macbook Air is a more curious choice, but that may be more about market positioning, (serving the needs of a very specific market), while not stealing sales from the more expensive Macbook Pro models. Plus it's one more (probably minor) way of making it smaller and lighter and hitting the weight target.

That's how I read the news and rumors right now. We shall see.

Cheers,  
-Jamie

>>No sir. I am still on XP...

We just bought a new laptop for the wife tho. We went with the Acer 5920 from WalMart. Awesome notebook.. but it comes with Vista. You almost can't find a new one without it. What pickles me is that XP is still out there being sold at original price in Best Buy and the other stores. Some places have marked it down a little... Folks in Best Buy claim Microsoft will stop support of XP soon... I told the lil youngin geek... I am not sure Microsoft is gonna force it on us this time. First, there are way too many issues with drivers that it is almost worthless! And just watching my wife play with it... it looks like it's got the resources constantly doing something, and the operator doing nothing.

I just received my Alesis io14 via UPS, but I have to wait until I get home from work to play! lol. Hopefully everything works out. I just need a simple firewire recording interface with 4 channels. It comes with Cubase LE, so I'll try that and stay away from the trial download. That is what I was playing with that was crashing so much...

Right, the iPod thing was probably to standardize on USB since that's a port that both Macs and MSWindows boxes all have. The Air thing was probably what I mentioned below.

It seems like  
> they are going away from more pro features.

I don't see a trend there.

To the contrary, they recently updated the Mac Pro desktop machines.  
They just released a free pro apps update.

> My guess is, the big announcement will be new iPhones and new carriers.

Can they support new carriers already? Don't they have at least another year of exclusivity with AT&T, or are you talking about other markets?

Cheers,

-Jamie

Turns out the audio coming out of the dock port is pre-headphone amp.

With one of these pocket docks you can get unbalanced audio out of an iPod w/o using the headphone jack.

I've got one on order. More to follow.

DC<http://www.youtube.com/watch?v=Tk4i7OKWSJw>You were aware of these?

<http://www.alesis.com/product.php?id=114>  
\_Integrated Universal Dock for iPod

- \_48V phantom power
- \_Aux sends and returns
- \_Three band per channel EQ with high/low shelving and mid band pass/reject

<http://www.alesis.com/product.php?id=121>  
\_Integrated recording for iPod

- \_48V phantom power
- \_Built-in limiter to avoid distorted recordings
- \_16-Bit / 44.1kHz and 48kHz recording to computer
- \_Two guitar mic/line inputs
- \_Aux sends and returns
- \_100 on-board, 28-bit digital effects - Reverb, Chorus, Flange, Delay
- \_3-band per channel EQ with high/low shelving and mid band pass/reject
- \_Steinberg Cubase LE 4 recording software included

Being a long time fan of Alesis (er, that's PRE numark anyway) products, I have to mention the use of the word 'pro' probably doesn't apply here.. however, still great idea and especially for a songwriting station or a let's record a rehearsal kind of deal.

Cool feature is a video out for the vid iPods.

It COULD be CD player. Maybe commercial CD's sound OK because you don't have  
the multitrack session of those songs to compare it to. Just a thought.

Dude!!! I abso-freakin'-lutely LOVE Blackmore's Night. Own every recording, including the dvd. I've seen them three times - once my wife and I flew from Chicago to Virginia to see them at the Birchmere.

My partner in Nlght Rock has interviewed Candice twice. What a sweetheart, with a voice like an angel.

I know Ritchie alienated a bunch of Purple fans when he took a hard right turn into Renn music. Their loss. Blackmore is writing and performing some of the best music of his life since he met Candice. And he seems happier than ever.

Now, if I could only get someone at the home office to reply to me, I'd love to discuss a basic, stripped-down acoustic show with them.

I'll just keep trying.

pabHey, I like those!

I found out recently that the audio in the dock port is pre the headphone amp and I am using the iPod with uncompressed audio now, (for commissioning of new systems), so I wanted a way to get that line level audio out for playback.

Now, if I could just get sp/dif out of the iPod I would be majorly stoked. Imagine a Lavry DA-10 on an iPod...

This is turning into a DeeJ project I fear...

DCHmmmm.. I am wondering now if maybe my issue(s) with Cubase crashing is related to midi and it's settings. I don't do midi and know absolutely nothing about it. In my Paris, I always turned it off within the cfg file.

Is there an easy way to turn midi completely off in Cubase? I see midi settings

in the devices/settings area, but I see no where to actually turn it off.  
Or do you normally turn that off on the device control panel. I'll have to look at that when I get home from work; it might be in there.

I remember taking a lot of stick for pointing out that taking on Apple, M\$FT,  
and linux all at the same time might not prove to be a great business plan.

TCBJust program a midi bar of 4 beats and Control + K to end of song.

And didn't we say at one time that Google was the most likely source for a  
new operating system?  
Granted, this is an open source OS that at the moment doesn't appear (from  
the review) to be a truly  
viable alternative yet. Maybe eventually.

The time is right for a new alternative no doubt - what do you think the  
likelihood is of Haiku  
developing into a true competitor though? Doesn't look promising unless  
Google takes it on (sounds like Bruno's project,  
not Google's) and makes it commercial OS with commercial dev resources to  
entice commercial apps - I can't  
see open source luring commercial app developers anytime in the next decade.

I can't afford one right now or I would. I swear, the click track just totally quit working. Everything is set up normally. It just doesn't make a sound. Well, after all my bitching and catterwalling about not being able to set the click track to a stereo pair in Cubase and then not being able to hear the click, I just noticed that there is a little column in the VST devices menu that says "Click", and furthermore, if you left click in that column, you can set your click track to any stereo or mono VST output you choose, and/or as many as you choose.

I'm so \*\*\*\*'in stupid that it's a miracle that I've lived this long. HI DeeJ,  
Oh so you mean you didn't read step one of the reply I had to you first post back on the tenth.  
:)

Read???Holy smokes... best of luck with that.

Incidentally, how did you manage to get a decent enough diagnostic done to actually \*know\* that you need all that? I'm in Canada (so completely different health care system), but I know that in my area, if it doesn't bleed or if you can't see the bone sticking out, good luck getting someone to figure out what's wrong with you.

Did you see a specialist? If so, what sort of specialist?

And (you may have guessed it), I ask because I've been having chronics elbow pain for years now, and it's getting much worse...

news:47b3db68\$1@linux...  
>  
> INDEPENDENCE FREE  
> <http://www.yellowtools.us/cp21/cms/index.php?id=782>Well....I'm having the cubase Klik trak  
trigger drum samples now and now  
that I can assign the click to any output, I don't have to use the control  
room function.....

Here's what I've got as a working tracking template:

26 VST mono inputs for mics and DI's and 8 x stereo inputs (routed to VSTi's being returned digitally from the slave DAW).

A stereo input on the Furman is dedicated to the VSTi that is tracking and another stereo input on the Furman is dedicated to the drum kit while tracking.

The remaining 12 mono inputs (if tracking simultaneously) other than the drums or VSTi's, would be tracking vocals or instruments and can be routed either individually or in groups to up to 7 mono inputs of the Furman from analog mono output busses in Cubase.

One analog output bus in Cubase and a stereo input of the Furman is dedicated to monitoring pre-recorded tracks.

The main mix is sent from the headphone output of my DAC-1 to a second stereo pair on the Furman and is routed to the performers if they want to hear it and also to the control room monitors for monitoring both pre recorded and currently recording audio.

There are 5 x HRM-16 remote mixers on the cue system.

The click is routed to a mono bus and main mix bus in Cubase and output to mono channel 8 of the Furman so each of up to 5 x individual performers can adjust the click level independently in their cans. In a pinch, each of the HRM-16 mixers can accept a second set of headphones so, in theory I could

have 10 players working on 5 remote mixers, though they would have to compromise a bit as to their individually customized levels.

I'm using ASIO direct monitoring in Cubase and outboard reverb units on the Fruman mixers so I don't have to jack around with managing FX sends in the CR, there is minimal CPU hit and no latency at all.

-----  
Go to Vst connections and VST Outputs. Open up the window enough to see the row that say click. on what ever stereo or mono bus channels you want to have the click track go out too.

Control the output level with total mix. The draw back is you can't control the click level other than globally in the metronome setup. But in general this work fine. Sense you can use these buses for audio such as headphone sends, etc you can pick and choose who hears the click.

Chris Ludwig

ADK Pro Audio  
(859) 635-5762  
www.adkproaudio.com  
chrisl@adkproaudio.comChris,

Check my answer to John's post below.

I seem to have all the bases covered using ADM now. I just keep Totalmix set to preset 7 with submix off, Monitor Mains set to Phones and Monitor Phones set to SPDIF and control everything via Cubase using and the Furman HDS-16/HRM-16 cue system.

I've got things routed to my Furman system now so that:

1. Up to 7 mono asnalog output busses can be individually level set for vocal/instrument input signals while tracking.
2. There is an individual analog stereo bus for monitoring audio being returned from VSTi's while tracking.

3. There is an individual analog stereo bus for whatever pieces of the drum kit I want to monitor while tracking-usually the drummer just wants the OH's along with the kick and snare and sometimes just the OH's.

4. There is an individual analog mono bus for adjusting the level of the click track that each performer can control independently

5. There is an individual analog stereo bus for pre-recorded tracks being sent to the cue system.

Each of 5 performers can control the levels of these busses independently of the others.

6. The main mix which is sumultaneously monitoring both audio being tracked and pre-recorded audio (and the click if desired) is being sent to both the cue system and the control room monitors/headphones.

Having that click track assignable to individual busses is a big deal because now I don't have to waste resources using a VSTi. I'm using a kick and closed hat. The samples it is triggering are good enough for tracking sessions.

Regards,

Deej

Unless there are some obscure consumer audio device I'm not aware or the only ones I know that have coaxial SPDIF are from Presonus, RME, MOTU, M-Audio and tascam, etc.

All of them are probably over kill for what you want.

There are some optical SPDIF units out because that is the most common in home theater.

If your laptop/has an optical spdif then I would just get a M-Audio CO2

to convert it to coaxial.

What's UG?

Being involved in system design, I have to handle autocad files and output them in a way that others can use them.

Autodesk does not support using AC on macs with Bootcamp, but they say it seems to work ok.

DCIt's a Mac Pro, and the goal is a house audio server. I don't want an interface, since I already have the DAC. I just need to get USB or FW into the AES or Sp/Dif input of the DAC.

I have to say, Control room is very cool..I'm still on version 3, but I hear version 4s control rool is even better..

They use a syncrosoft dongle like Steinberg. You can put all the  
yellow Tools stuff on one key if you are using the retail one.  
their whole product line is awesome. I hope they get more notice in the  
US their sampler it the most flexible I've seen. It's the only I've seen  
that can properly use multi-core CPUs. The filters and effects are very  
good.

The Free version is nice. actually has some usable sounds.

good luck with the slicing and dicing!

-steve [http://www.vertexdsp.com/products/ReleaseNotes\\_FaderWorks.rt](http://www.vertexdsp.com/products/ReleaseNotes_FaderWorks.rt) f

Before I sold my Paris system, I bought this plugin. I have never even used it. Does it now provide PDC if instantiated on every Paris channel used during a mix? that would be huge if it did.Hi DC,

Sense you already have optical SPDIF I/O built into the MAC and it handle 24bit and up to 96k it would seem easiest to use the M-Audio CO2. You can convert the optical to coaxial that way.

[http://www.m-audio.com/products/en\\_us/CO2-main.html](http://www.m-audio.com/products/en_us/CO2-main.html)

They used to make a cool box called the CO3 that used to do Toslink to AES but. Ebay is your only hope for that one though.

(where applicable)

but yes, put it on each channel, throw in a plugin and input it's latency and  
Bob's your Uncle...latency adjustment across all channels.

Nice thing is if you add a different plugin to a different channel you just  
have to input that latency on that channel's faderwork plug and all channels  
get adjusted accordingly (and so on and so on....

over 30 DVDs,  
and the new SP Platinum Pro/Play version will have 16 bit samples as well  
(basically Gold XP + Plat XP),  
which I think will break the 200G mark.

The only caveat I see to drives for distribution would be lifespan - drives  
eventually die, but maybe before then  
we'll have 1+ TB optical disks to back them up on. ;-) Sure would be a heck  
of a lot faster loading up libs though.

 >So basically, if you put this on each channel any plugin you add to that  
 channel will report it's latency and then all channels can be adjusted to  
 compensate for this amount of latency? If this is cumulative, that is

basically the same as having PDC. The only difference is a mouse click each time you add a plugin so that the remaining channels adjust to the additional latency.

Does this work with the high cumulative latency numbers that are incurred when UAD-1 plugins are stacked on tracks?

I guess, what I'm getting at here is if I were to put together another Paris DAW, say 4 x Cards (which I know I can channel to a single IRQ on a 13 slot Magma) and then have my other Magma in use running the two POCO's and 4 x UAD-1 cards, I could have a Paris DAW that that would integrate UAD-1 and POCO plugins and I wouldn't have to jack around with nudge/slide or Sampleslide?.....I could just click a mouse every time I added another plug and everything would be compensated?

Speaking of that, I was thinking about investing in a company back in the  
90s that had this technology. They supposedly had a disc the size of a CD  
that held 10 Terabytes and had a disk on the way that would hold 100 terabytes,  
it was also suppose to be write once recordable. Glad I didn't buy in to  
that. Maybe some day will have this in our hot little hands.

Dang! Take care....

Oh -- I found the yellow box in my front closet. I swore I had sent it back to you -- I'll wait a week now, and then get it back on it's way.

Sorry, dood. Didn't mean to hold on to it this long...

pabl thought you were trying to simplify :)

<http://uk.youtube.com/watch?v=U8OMOObvJdYI> had wondered what had become of that technology:

<http://www.ddatainc.com/>  
(current owner after Constellation 3D went belly up)

I wonder if it will ever see the light of day. I think there are a couple of other high density technologies in development as well. I seem to recall reading about a molecular storage concept at one time.

Well, I've been thinking about some aspects of Paris that I really =  
liked. However, there's still the situation with bussing across =  
submixes, but it's not something I couldn't overcome.

I really miss the Paris EQ and FX actually. They are much better, IMO, =  
than any VST plugins I've heard that aren't DSP driven.

the more I delve into Cubase, the more things about it that I like, but =  
also, the more sonic weaknesses I see vis-a-vis Paris. It's possible to =  
do the "big" thing in Cubase, it's easy to do it in Paris. I miss the =  
easy part.=20

I think I'd be a bit more satisfied with Cubase if I was using a DM2000 =  
with digital I/O options that would accommodate my outboard gear. =  
Anybody got a spare \$20k laying around?

That was beautiful. Here's one of an amazing player out of Austin. He  
dropped my jaw a number of times when I was living there.

http://uk.youtube.com/watch?v=31QQ1gNpAaY&feature=relatedThis is a multi-part message in

I had forgotten about the Paris VST EQ. You got a link? Actually, now =  
that I think about it, I think I bought it years ago. Not sure WTF I put =  
it though.

"Aaron Allen" <know-spam@not\_here.dude> wrote in message =

news:47b5348f@linux...

That's about it man, and why Paris lives on at my place. I can't get =  
away from knowing it sonically so well, the magic glue the bus provides, =  
along with the punch I/O love. To be honest though, the UAD latency =  
pissed me off so much I just yanked the card and static bagged it. It's =  
probably bound for my non DSP native rig soon as I get the time.=20

BTW, don't forget that the Paris EQ is available as a VST.=20

"Deej" <noway@jose.net> wrote in message news:47b5321a@linux...

Well, I've been thinking about some aspects of Paris that I really =  
liked. However, there's still the situation with bussing across =  
submixes, but it's not something I couldn't overcome.

I really miss the Paris EQ and FX actually. They are much better, =  
IMO, than any VST plugins I've heard that aren't DSP driven.

the more I delve into Cubase, the more things about it that I like, =  
but also, the more sonic weaknesses I see vis-a-vis Paris. It's possible =  
to do the "big" thing in Cubase, it's easy to do it in Paris. I miss the =  
easy part.=20

I think I'd be a bit more satisfied with Cubase if I was using a =  
DM2000 with digital I/O options that would accommodate my outboard gear. =  
Anybody got a spare \$20k laying around?

Hmmm, I thought you tried it out. Here is the info on Wormhole. Just thinking you might be able to run the UAD-1s on separate computers, but you'd be back to multiple computers.

<http://plasq.com/wormhole>

<http://plasq.com/wormhole/paq>

<http://code.google.com/p/wormhole2/>

You can also get it here:

The issue with me was and still is latency. If I have to start sliding individual tracks around as I add plugins, it's a no-go. This is the main reason I sold my Paris rig.Hi DJ,  
 As I have posted about faderworks this can compensate for latency on every Paris audio track !  
 The input is minimal but needed anyway.  
 The concept is the following:  
 You make a default Paris project with faderworks on EVERY Paris audio track.  
 I have 64 !  
 Then if you put a waves plugin that has 64 samples latency then you just

type that value on the very track you hve put the waves plugin, then ALL other audio tracks get alligned with that track !!  
If you put a UAD1 plugin on track 4 that has 4096 samples latency then you just type that latency on that track and ALL other audio tracks get alligned with that latency.  
On the track that has the waves it just automatically substracts the 64 and adds 4096-64 all by itself !  
This program lets you group ACROSS submixes with up to 32 subgroups !!!!  
So you can have all your guitars (across submixes) automated by level thru faderworks. You can mute or solo this group too !  
There is an update now that has a better layout and graphics !!  
Hope this helps,  
Regards,  
Dimitrios

Yeah, it looks like you would have to delay all the tracks by 32000 samples,  
and delay plugins would have to be dealt with separately. Good to see you still have a sense of  
humor.

I'm amazed I haven't had any RSI problems yet. Considering that the time  
I don't spend typing on a computer I spend making music you'd think I'd have  
had them all by now. So far, just lucky I guess.

Take care,

TCB

If done properly on a regular basis, the repeated kneading of the torsoes of

young nubile is recommended therapy for counteracting the effects of bilateral carpal tunnel syndrome.

;o)That's a beautiful thang! Thanks for the heads up, Steve!

steve the artguy wrote:

>

> <http://uk.youtube.com/watch?v=U8OMOObvJdY> just to let you know i phoned in devices and eventually spoke to rachel (?).

anyway she was very helpful and said she'd pass my email to the right person

almost straight away i got my response.

it didn't work. i was gutted. a few more emails back and forth and still no joy. i was ready to give up on the whole thing until i realised that the response will not work UNLESS YOU HAVE FILLED IN YOUR ADDRESS AND PHONE NUMBER.

i must have known this years ago but had forgotten it.

anyway now it's working again. thanks to everyone here for their help.

best wishes

maxHoly Crap!!! That guy is frickin' astonishing. Jimi's mind would be blown, I am sure.

Deej.

and add the man hours spent, (at whatever rate you choose), you would easily  
have spent over \$20,000 dollars on your investment.  
Makes the DM 2000 an attractive proposition.

&gt;&gt; when UAD-1 plugins are stacked on tracks?<BR>

&gt;&gt;<BR>

&gt;&gt; I guess, what I'm getting at here is if I were to put together another <BR>

&gt;&gt; Paris DAW, say 4 x Cards (which I know I can channel to a single &nbsp;IRQ on a <BR>

&gt;&gt; 13 slot Magma) and then have my other Magma in use running the two POCO's <BR>

&gt;&gt; and 4 x UAD-1 cards, I could have a Paris DAW that that would integrate <BR>

&gt;&gt; UAD-1 and POCO plugins and I wouldn't have to jack around with nudge/slide <BR>

&gt;&gt; or Sampleslide?.....I could just click a mouse every time I added another <BR>

&gt;&gt; plug and everything would be compensated?<BR>

&gt;&gt;<BR>

&gt;&gt;<BR>

&gt;&gt; &quot;Don Nafe&quot; &lt;dnafe@magma.ca><FONT FACE=3D"Verdana, Helvetica, Arial"> <a href=3D"mailto:dnafe@magma.ca">&lt;mailto:dnafe@magma.ca= a&gt;</a> </FONT><FONT FACE=3D"Arial">&gt; wrote in message news:47b4cb97@linux</FONT><FONT FACE=3D"Verdana, Helvetica, Arial"> &lt;news:47b4cb97@linux&gt; = </FONT><FONT FACE=3D"Arial">...<BR>

&gt;&gt;&gt; I'm still not sure whether it automatically detects a plugin's latency <BR>

&gt;&gt;&gt; (where applicable)<BR>

&gt;&gt;&gt;<BR>

&gt;&gt;&gt; but yes, put it on each channel, throw in a plugin and input it's latency <BR>

&gt;&gt;&gt; and Bob's your Uncle...latency adjustment across all channels= ..<BR>

&gt;&gt;&gt;<BR>

&gt;&gt;&gt; Nice thing is if you add a different plugin to a different channel you <BR>

&gt;&gt;&gt; just have to input that latency on that channel's faderwork plug and all <BR>

&gt;&gt;&gt; channels get adjusted accordingly (and so on and so on....<BR>

&gt;&gt;&gt;<BR>  
&gt;&gt;&gt;<BR>

</HTML>

--B\_3286002021\_5305604--Macgyver can build an airplane out of gum and paper clips, but Chuck Norris

can kill him and take it.

- There are no disabled people in the world. Only those people who have felt the wrath of Chuck Norris.

- Chuck Norris has recently changed his middle name to "Fucking."

- When Chuck Norris sends in his taxes, he sends blank forms and includes only a picture of himself, crouched and ready to attack. Chuck Norris has not had to pay taxes ever.

- Chuck Norris won 'Jumanji' without ever saying the word. He simply beat

the living shit out of everything that was thrown at him, and the game forfeited.

- There are two kinds of people in this world: people who suck, and Chuck Norris.

- In the movie "Back to the Future" they used Chuck Norris' Delorean to go back into time and into the future. When they gave it back to him with a scratch on it he was angry and roundhouse kicked Michael J. Fox, which years later was the cause of his Parkinson's disease.

- Chuck Norris always has sex on the first date. Always. The only time he didn't was in 1941, otherwise known as the beginning of the Holocaust.

- Chuck Norris can enter up, up, down, down, left, right, left, right, B, A, Select, Start using only his erection.

- Crop circles are Chuck Norris's way of telling the world that sometimes corn needs to lie the fuck down.

- When Chuck Norris goes to donate blood, he declines the syringe, and instead requests a hand gun and a bucket.

- Chuck Norris once walked down the street with a massive erection. There were no survivors.

- In an average living room there are 1,242 objects Chuck Norris could use to kill you, including the room itself.

- Chuck Norris has two speeds: walk and kill.

- Chuck Norris is the only man to ever defeat a brick wall in a game of tennis.

- Chuck Norris can set ants on fire with a magnifying glass. At night.

- It takes Chuck Norris 20 minutes to watch 60 Minutes.

- Chuck Norris is not lactose intolerant, he just refuses to put up with lactose's shit.

- Chuck Norris can divide by zero.

- When Chuck Norris does a pushup, he isn't lifting himself up, he's pushing the Earth down.

- Chuck Norris puts the m's on M&Ms.

- Chuck Norris was a hidden playable character on Mortal Kombat 2 on the Sega Genesis.
- Chuck Norris is known for his modesty but readily admits that he is the 8th wonder of the natural world
- Chuck Norris goes to the toilet once a month, if he needs to or not.
- Chuck Norris burned down an entire forest when he was experimenting with water.
- There are in fact 31 letters of the English Alphabet however only Chuck Norris knows what the extra 5 letters are.
- Occasionally Chuck Norris will call up the Power Rangers just to say hi.
- Chuck Norris has no concept of time, if you go to his house you won't find a single clock. When you ask to leave because it's getting late he stares at you blankly until you sit back down.
- Chuck Norris can believe it's not butter.
- Chuck Norris once ate a banana without having to peel it.
- Every piece of furniture in Chuck Norris' house is a Total Gym
- In a recent interview, Chuck Norris told Entertainment Tonight co-host Mary Hart that his most memorable role was when he played the third breast on the hooker in "Total Recall".
- Chuck Norris once did a back flip off the Great Wall of China.
- Chuck Norris doesn't need to swallow when eating food.
- Chuck Norris caught all 386 pokémon in just under 2.7 seconds. He says he won't trade any of them for anything.
- In one episode of Fresh Prince of Bel Air, Chuck Norris replaced Carlton for one scene and nobody noticed.
- Chuck Norris broke his own leg, purely for the sake of winning the paralympics.
- Chuck Norris will never fully be male nor female. Doctors once asked him which he preferred. He gave them an ad for a Total Gym.
- Chuck Norris frequently signs up for beginner karate classes, just so he can "accidentally" beat the shit out of little kids.

- Chuck Norris doesn't understand why you should consult your doctor if your erection lasts for more than 4 hours. His erections have been known to last for up to 15 days
  - Chuck Norris does not hunt because the word hunting infers the probability of failure. Chuck Norris goes killing.
  - If you look in a mirror and say "Chuck Norris" three times, he will appear and kill your entire family... but at least you get to see Chuck Norris.
  - A handicap parking sign does not signify that this spot is for handicapped people. It is actually in fact a warning, that the spot belongs to Chuck Norris and that you will be handicapped if you park there.
  - Chuck Norris is 1/8th Cherokee. This has nothing to do with ancestry, the man ate a fucking Indian.
  - Chuck Norris was the original Danny Tanner on the hit family sitcom, "Full House". He was replaced by Bob Saget after an unfortunate incident with one of the Olsen triplets.
  - When Chuck Norris was driving he saw a sign that said, "Caution: Small Children Playing." So he slowed down, but then it occurred to him: Chuck Norris isn't afraid of small children.
  - If Chuck Norris is late, time better slow the fuck down.
  - In fine print on the last page of the Guinness Book of World Records it notes that all world records are held by Chuck Norris, and those listed in the book are simply the closest anyone has ever gotten.
  - Chuck Norris invented cancer because he was tired of killing people.
  - Superman owns a pair of Chuck Norris pyjamas.
  - A Chevy truck was totalled in a car accident. It hit black ice, then hit Chuck Norris. You tell me what did the damage.
  - Everytime Chuck Norris hears the term 'Virgin' Mary he laughs out loud.
  - It used to be called the Tower of Pisa until Chuck Norris decided to roundhouse kick the shit out of it.
  - Chuck Norris kills 14 white people at the end of every week just to prove he isn't racist. Oh man...I've seen all this stuff before, but I still love it! Great stuff!

>Curiously, what about the UAD latency stuff pisses you off? I know your a  
way smart dude. It's really just nudging back 400 or 800 ms and applying  
sampleslide at the appropriate values.  
I'll admit, it's not as simple as ADC, but to me it doesn't seem that hard.  
I'll admit that I am jonesing for a drum buss  
comp that could operate with ADC when using Paris.

```

Mostly, A/B comparisons and plug stacking - especially with mulit mic'd source tracks. It becomes an exercise in math and presets just to make the drum kit flow (in phase) with plugs and takes away the art form for the way I like to work. I'm pretty freakish about the timing of the kit mics.

I could do the sample slide thing on the 'non' plug tracks and just remove compensation delayed inserts as needed but that keeps the automation editor kinda worthless (mostly on the drum kit) for manual/visual draws against the waveform, and I'd much much rather automate and keep the natural thing happenin than to compress/effect too much. I find that automate technique to be absolute gold on a vocal track or for polishing those turds we all know and love. To add to my frustration, I can do all those things and more in a native app, render the move and dump it to paris so as not to have to fool with it. But that's more time spent on things I should be able to do more quickly in one app. And a personal flaw/peeve of mine is finding myself focused on technical rather than musical details at mix time when I should be making art, if that makes sense...

I even considered just using my creamware 3-card setup as a DSP farm via adat pipes, but to be honest I found that interface taxing on my patience and don't have a machine room anymore ..... so I have to be careful about the amount of ambient noise in the room.

I know, I need to fix that (bad Aaron). Not enough positives there, and I don't want to start a DeeJ inspired bank account war over here :)

Guess there's no magic bullet - yet. I think native apps are getting real close though man, at least for me, to taking over as the main DAW of choice.

>and it's coming our way for sunday and monday. by colorado standards  
it may not be much but we've had over 60" so far along with a couple  
of 2-3" rain storms.  
speaking of the u.p. 68' was a bumper years for snow there. i  
remember diving off the dorm roofs into the snow...not drifts, just  
the regular snowfall.

Chuck Norris appeared in the "Street Fighter II" video game, but was removed by Beta Testers because every button caused him to do a roundhouse kick. When asked about this "glitch," Norris replied, "That's no glitch."=20

Chuck Norris lost his virginity before his dad did.=20

Since 1940, the year Chuck Norris was born, roundhouse kick related deaths have increased 13,000 percent.=20

Chuck Norris sold his soul to the devil for his rugged good looks and unparalleled martial arts ability. Shortly after the transaction was finalized, Chuck roundhouse kicked the devil in the face and took his soul back. The devil, who appreciates irony, couldn't stay mad and admitted he should have seen it coming. They now play poker every second Wednesday of the month.=20

Filming on location for Walker: Texas Ranger, Chuck Norris brought a stillborn baby lamb back to life by giving it a prolonged beard rub. Shortly after the farm animal sprang back to life and a crowd had gathered, Chuck Norris roundhouse kicked the animal, breaking its neck, to remind the crew once more that Chuck giveth, and the good Chuck, he taketh away.=20

Chuck Norris's girlfriend once asked him how much wood a woodchuck could chuck if a woodchuck could chuck wood. He then shouted, "HOW DARE YOU RHYME IN THE PRESENCE OF CHUCK NORRIS!" and ripped out her throat. Holding his girlfriend's bloody throat in his hand he bellowed, "Don't fuck with Chuck!" Two years and five months later he realized the irony of this statement and laughed so hard that anyone within a hundred mile radius of the blast went deaf.=20

Chuck Norris does not sleep. He waits

Chuck Norris is not hung like a horse... horses are hung like Chuck Norris. Chuck Norris was the fourth Wiseman. He brought baby Jesus the gift of "beard". Jesus wore it proudly to his dying day. The other Wisemen, jealous of Jesus' obvious gift favoritism, used their combined influence to have Chuck omitted from the Bible. Shortly after all three died of roundhouse kick related deaths.=20

To prove it isn't that big of a deal to beat cancer. Chuck Norris smoked 15 cartons of cigarettes a day for 2 years and acquired 7 different kinds of cancer only to rid them from his body by flexing for 30 minutes.=20

Chuck Norris does not have AIDS but he gives it to people anyway.=20

There is no chin behind Chuck Norris' beard. There is only another fist. =

Chuck Norris once lined up to kick the winning field goal of a high school football game. When the football went flat, he persuaded the referees to let him kick the field goal with a 3 month old child. Chuck roundhoused kicked the baby 60 yards through the uprights and then proceeded to bang every girl in the stadium.=20

Chuck Norris does not have AIDS but he gives it to people anyway.=20

There is no chin behind Chuck Norris' beard. There is only another fist. =

Chuck Norris once lined up to kick the winning field goal of a high school football game. When the football went flat, he persuaded the referees to let him kick the field goal with a 3 month old child. Chuck roundhoused kicked the baby 60 yards through the uprights and then proceeded to bang every girl in the stadium.=20

If you can see Chuck Norris, he can see you. If you can't see Chuck Norris, you may be only seconds away from death.=20

On the 7th day, God rested.... Chuck Norris took over.=20

Chuck Norris drinks napalm to quell his heartburn.=20

A duck's quack does not echo. Chuck Norris is solely responsible for this phenomenon. When asked why he will simply stare at you, grimly.=20

Chuck Norris doesn't believe in Germany.=20

If you want a list of Chuck Norris' enemies, just check the extinct species list.=20

Chuck Norris has never blinked in his entire life. Never.=20

Chuck Norris once shot an enemy plane down with his finger, by yelling, "Bang!"=20

Chuck Norris doesn't need to swallow when eating food.=20

Chuck Norris went looking for a bar but couldn't find one. He walked to a vacant lot and sat there. Sure enough within an hour an a half someone constructed a bar around him. He then ordered a shot, drank it, and then burned the place to the ground. Chuck Norris yelled over the roar of the flames, "always leave things the way you found em!"=20

One time while sparring with Wolverine, Chuck Norris accidentally lost =

his left testicle. You might be familiar with it to this very day by its =  
technical term: Jupiter.=20

Contrary to popular belief, Chuck Norris, not the box jellyfish of =  
northern Australia, is the most venomous creature on earth. Within 3 =  
minutes of being bitten, a human being experiences the following =  
symptoms: fever, blurred vision, beard rash, tightness of the jeans, and =  
the feeling of being repeatedly kicked through a car windshield.=20

Chuck Norris is Luke Skywalker's real father.=20

Chuck Norris does not use spell check. If he happens to misspell a word, =  
Oxford will simply change the actual spelling of it.=20

-----=\_NextPart\_000\_0168\_01C87082.853A77C0--What did it break? It's working OK for me here  
right now. Of course, you're  
talking to someone who can't even figure how to get the click track to work.

"John" <no@no.com> wrote in message news:47b6e100\$1@linux...  
>  
> And in the Steinberg tradition, fixes the problems that were broken and  
> breaks  
> the shit that used to work!<http://www.cubase.net/phpbb2/viewtopic.php?t=91363>

VSTi dropped notes bug  
freeze bugs  
MP3 export, samplerate and tags.  
Halion One not triggered by certain pad controllers.  
panning issues with VSTs  
hanging notes  
UAD Causing Spikes  
Waveforms Inaccurately Displayed.  
Large Amount Of Plugin Compatibility Issues.  
Midi Receiving Plugins Not Holding Onto Midi routings.  
Freeze Inflexible.Fwiw - I'm on 4.1.2 of Nuendo, and haven't seen any of these bugs.

The UAD spikes issue is caused by loading up a UAD card, with UAD-1 plugins  
on VSTi outputs, then turning plugins on and off rapidly during playback -  
something I never do. It's a bug to some degree, but one that you will only  
see if you "torture" your DAW by inserting, removing, or enabling/disabling  
high latency plugins during playback, which will obviously cause playback  
dropouts and glitches (native linear phase and convolution plugins might  
cause it as well). My assertion on this thread on the Nuendo forum was that  
it's caused by a bug in PDC's recovery, brought on by plugins with high  
latency (dsp cards esp. since there are timing issues associated with PCI  
bus transfers; but also convolution, and linear phase plugins with look  
ahead algorithms). Avoid turning these plugins on/off during playback (I  
had to do this rapidly for over a minute to cause the spike), and you will  
likely never see it unless there are other timing issues with your system

that make the scenario worse, imho.

No hanging notes here - I've had issues with a long, rogue midi note being written into a track from time to time, but that's been an issue since 3.x.

No VSTi dropped notes - and I use a lot of VSTi's with large templates (300-400 midi tracks) and high memory allocation.

Plugin compatibility: I have 3 plugins that aren't compatible with N4, and all are due to developers not following, or misinterpreting the VST 2.4 or 3.0 specs since other plugins work perfectly fine, including versions from the same developers.

I had that happen during a session the other day. I had midi input set to "all". I changed it to the specific input that was interfacing with the controller.....no more problem.

 to needing  
 several controllers active for different uses. Shouldn't happen unless  
 there's a bad controller  
 online, but I should be seeing it with one of the controllers if that's the  
 case.

I need to test this with Samplitude and Sonar just to see if it's a  
 Nuendo/Cubase problem, or a fact  
 of MIDI being a prehistoric and sloppy protocol.

See attached pic... usually I don't have to do this sort of thing, because it's normally not too difficult to place the snare mic so that you get a good snare tone, while minimizing hi-hat leakage by getting the null area of the snare mic's pickup pattern in the right spot to reject most of the direct hat sound. In this case, however, the drummer's mounting rack arrangement made that an impossibility - there was too much hi-hat in the snare mic, so... pop filter + some cardboard + some tape, and voila! :)

Funny to see your name here again....I hope you had enough paris gear left  
as 2 years ago when I was working over in Scotland I think I left back to  
the States in the fall of 2005 with a lot of what you and David? had put  
in storage. Anyway, just wanted to hello.

>Hi All,

I've been working on a mono-band version of the multiband compressor so that  
we could use less dsp when there is just one offending band. This will be  
great for compressing just the lows or as a deesser.

I've got the mono version working, and I should have the stereo version finished  
soon. The mono version allows 4 instances, compared to two instances for  
the full multi band.

I've been investigating the DC offset issues in the crossover. It seems  
that whenever any PARIS eq is set to a narrow band and at a low frequency,  
it generates some DC offset. I've tried putting various DC offset filters  
before and after the EQ, but they don't seem to help.

If anyone out there is skilled in DSP math and has some ideas for how to  
filter this better, I would love to hear from you. As of right now, I'm  
out of ideas on how to fix this. Not that it is a huge big deal. I'm getting  
.1% DC offset measurements by just tweaking the settings to minimize the  
effects.

Anyway, I just thought I'd check in and let everyone know I'm not dead.

All the best,

MikeThis is a multi-part message in MIME format.

Hi Mike,

I'm glad to hear you're still kicking away at it  
AND your not dead. I love the idea of a single  
band of compression to save dsp. Often times  
that's all the doctor ordered on single tracks.  
Will it have a switchable style of eq ie: fully=20  
parametric/notch or shelving/bandpass?

I'm in for what ever you come up with and will  
pass your DC offset question on to a very  
smart friend.

Thanks for your effort as always!

Tom
