Apple hard drives are too expensive also! If it's a desk top, and you don't care about the iDVD software, you can order it with out a DVD burner. Apple uses Pioneer and some Sony DVD burners. There are sites that tell you which models they use. Just drop one in later and save a good hundred bucks.

Jamie is right, best to wait a bit, Apple is about to drop new models. Rumor is, that Apple has a new faster smaller tower in the works. I just hope they don't do something stupid and limit the PCI slots. Some manufactures are starting to put card buss on towers, so who knows?

>The reason for using Pioneer or Sony for the DVD player, is because Apple's
multi media software will work with it. You can use other brands of burners
with a Mac, but you would need to get toast or dragon burn or some other
software. Many drives will come with an OEM version of toast or some thing.

I think Apple also used some Toe_shit_ba drives (Toshiba).

Nobody else does this in the industry, only Apple.

If you talk to some body higher up you can sometimes get stuff done. there
first line of support will some times tell you stupid stuff like just reinstall
your operating system. If you listen who's fault is that? Some of those
people are right out of training. You got to go higher!

Apple needs to fix stuff like that. Although, no company can or will support
every configuration.

YES! Apple RAM is over priced, don't buy it, ever! However, the RAM in
the MacPro tower was specially engineered to work in that machine. Like
I said, it has heat sinks on the memory. That is how they got so much RAM
in the MacPro, and as close together as it is. As I know it, if you put
regular ram in those machines, you will kill the MOBO with in a couple of
years.

What an amazing show.

;o)> I much prefer to work with clients who don't mind turning up the volume on
> their stereo to achieve loud.....but that just ain't *radio ready* these
> days.

LOL, actually, that IS *radio ready*, because it will sound so much
bigger after going through the broadcasting chain. Good luck convincing
clients that, though! You might ask them their favorite radio tunes
from the 70s, 80s or early 90s... and actually listen to them on the
radio next to current productions on the radio. That might actually
work! Mixes with dynamics left intact really do sound better on the
radio...

:)

GrahamBeen a weird month for weather here as well... two days of snow, then
low 70's for a day or two, then 4" of snow, then two more days of
T-shirt weather... etc..

The geese around here are flying in circles! :-)

David.

services can cater to every man's need. Oops,
you guys said escrow. Sorry!

;))

cover all the additional costs of
escrow, I don't see a problem with it... they are trying to cover
their collective a**es... can't blame them for that...

David.

4.6 works fine with Paris in XP. I had to disable mono plugins
in the UAD install like Rod said. Otherwise every plugin
had a dry and delayed signal. FxPansion 3.3 worked fine
with it also. =20

The Helios (brief testing) has an 'add only' kind of eq that has a sound
for sure. The 10k boost is very British and the mids are also smooth
but kinda punchy I'd say too. Silly words I know but just what I sensed
the first time around the block. The lows are similar to the mids but =
I'm=20
not happy that you can't use the hipass with the boost down there like a
Pultec. I'll be using it happily with rock drums and e. guitars for =
sure.

Good stuff if you like to add eq and gain the color that that imparts.
Tom

the USB port of my mobo. USB port wuit working and BCF
quit working. I unplugged the BCF and returned it to MF. . USB port never
worked again.

Hows that for a review?

;o)
