512MB RAM and a pair of 5 meter DVI-D cables to hook them up. I was in a print shop earlier today and saw a 22" Dell wide screen running analog. It was very nice and detailed and a pair of these would have probably worked, but I think that having the bit of extra screen real estate is something I'll be glad I did. I really like the adjustability of these monitors. Being able to raise and lower them will really help the ergonomic mojo here.

In BIOS there is "SW Single Processor Mode - enable/disable" this forces
the processor to run in single core mode, jus

David,
So there's no real-time automatic mode? Maybe standalone on my Paris =
comp
is the way to go then. A friend of mine has the full blown version =
around here.
I'll have to get a demo from him. He loves it with Logic.

Is the polyphonic version as good quality as it gets? Worth the extra =
cash?
Tom

"EK Sound" <askme@nospam.com> wrote in message news:45c7b357@linux...
Just to explain... the Melodyne plugin has to "record" the track from=20
the host first... in real time. Then you can manipulate the sound=20
during playback. One issue here... if you try to go back to the track =

(not that you need to) and make additional edits, these edits will=20
have to be recorded into Melodyne again. You would lose what work

nd as far as I'm concerned live =
timecode=20
vinyl manipulation (with the
buffers set to the lowest possible in =
the RME=20
config) is pretty demanding
real time usage.

So, I now use =
and=20
endorse crappy ACER laptops for audio use, especially if
the cost =
of the=20
added on hardware double the cost of the portable.

BTW - FLAC =

kicks=20

serious amounts of ass as well.
