Some good suggestions already (especially the SSL one, IMO),
but in that price range you can't leave out the Manley
Vari-Mu... \$3,600 at Mercenary. It CAN get colored if you want
it to be, but it's pretty damn clean.

<http://www.mercenary.com/manalltubvar.html>

NeilCongrats!!! Post a pic of your studio once you get it setup...

>Hi Tony,

I have some files I can send .

These are 24bit Wav files recorded by Roger Nichols.

Thanks,

Morgan :)

I know the 163 and the 166 share the same VCA (except as noted) and these both have different envelopes-of-attack from the 161. This has a lot to do with the overall sound.

I should point out that the person who told me about some of the early 166 boxes was not from DBX, but was a technician that I trusted and he should have known. I could be wrong about this.

You should be in a good position to listen to the two units side by side.
This is really the best way anyway, particularly since many of the older
units are way overdue for a rebuild/recalibration.
Looking inside is not always helpful. The early VCAs are not always labeled.

The attached image looks generally like most of the early VCAs.

The Compeller is very much like a RNC on supernice. It has Servo = transformerless, circuitry that makes it VERY clean sounding. Unfortunately, it has = no attack or release controls so it is a little slow for drums. The Compeller = could best be described as an automatic leveler. It sounds like to an = engineer riding input levels
