Rod,  
In my P3 days when it got to the edge I'd get those clicks too.  
I understand you don't really get three times the power from three UADs.  
Maybe their resources are also on the brink?

Hey Mike, after I get the P4 happening again I'll take you up on the =  
Hyperthreading fix.

Tom

"Mike Audet" <mike@....> wrote in message news:471f6311\$1@linux...

Hi Rod,

I'll post some instructions on my website later today.

I think what is happening is that the PCI bus is tying up the 1 cpu =  
and samples  
are overflowing a buffer and not making it to disk. With a second =  
CPU. it  
may be enough to keep things moving smoothly. We'll just have to try =  
it.

All the best,

Mike

Hi Rod,

Here's the text from a post I did a little while ago. It's not quite complete. It turns out that you also need the intaffinity flag set for it to work. I just had that set for other reasons already, so I didn't know it was part of the fix.

So, to add the intaffinity switch, open c:\boot.ini and add "/INTAFFINITY" so that the line reads something like:

```
[Operating Systems]
multi(0)disk(0)rdisk(0)partition(2)\WINDOWS="Microsoft Windows XP Professional
-int affinity" /fastdetect /
```

Good to have it taken care of.

I was reading about Bob Marley yesterday.. It seems he had a similar  
situation on his foot a couple years before the cancer killed him. He  
wouldn't allow them to take any tissue because he believed he should  
be kept "whole". (religion) What a shame.
