Sounds like fun!

Like my gig last Sunday night where I open the front of the amp rack
right at the beginning of soundcheck, only to discover that some
asshole at the theatre had removed my two Crown monitor amps from a
PERMANENT INSTALLATION (apparently to use for our annual fundraising
banquet, completely ignoring the FULLY-POPULATED, WIRED, EQ'D AND

PATCH-PANELED 'BANQUET-IN-A-BOX" ON WHEELS that I had already built) and then, not only didn't tell me or anyone, but also didn't have the common freakin' courtesy to PUT THE DAMN THINGS BACK IN THE RACK.

Yeah, that was fun. I swore a lot. Fortunately, artists were all good friends of mine and we all pitched in and put it back together...

pabHey Bill ..Love the music..The Angolina tune is Hot!!!! I have a song that I'm producing that has that same of vibe. I would love for you to laydown a killer Clasical guitar solo..

I'll email you. Please be kind on the price..

>Hi,

This is a very important aspect for all Paris users that do not only use the AD input card or Mec's converters.

I for myself have two ISA-200 which have digital board.

I have two DBX 376/386 which also have digital boards.

I have an outboard converter, so far 9 digital cards and the ADI-Pro8 which adds another 8 plus the ADA-8000 from Behringer (Ok don't shout here it does sound very decent !)

So a total of 25 external ad converters.

Now you have to record using some or all of these ad's plus the aris one's.

Here comes the latency thing that digital adds which is different for every device some samples more or less.

Now you wanna record phase related material like drum recording and you care much about phase here what do you do ????

Well first of all you have to measure each device's latency.

I for myself am Using the creamware cards for digital patchbay where all my digital converters get there ffirst.

After measuring the latency of them as apposed to Paris 24bit input card, (Yes Paris inouts are the fastest for Paris daw), I measure using both the digital out and analog out of every device together and record a small portion of a vocal path.

Using Faderworks I find the exact latency until the almost cancel themselves (never happens !) and make a small list.

ISA-220 thru a AES to ADAT device thru creamware pulsar ADAT in , Pulsar ADAT out and Paris ADAT in I get 22 samples of latency as aopposed to Paris direct 24 bit card input.

So that means that the ISA is 22 samples behind Paris input.

Same for other ISA-220 , DBX 376 29 samples DBX 386 30 samples, ADI-PRO8 26 samples and standalone external converter thru behringer ultramatch reclocker (to use its worcdclock input) to Pulsar and to Paris it takes 63 samples.

Now that I measured I have two options to work.

First I can delay all digital inputs inside creamware to be exact of 80m samples latent.

That is less than 2 ms latency and just use 1 ms nudge inside Paris OR for the Faderworks users just type the exact latency on the Faderworks instance that relates to the audio track in Paris where the digital input gets present.

You can have them always on same Paris tracks and have a default Paris project with faderworks alreay loaded with the latencies involved.

Woith faderworks you don't care about nudge things or whatever.

You just type the latency of the track and it takes care of all the other Paris tracks (Well you have loaded faderworks ON ALL Paris tracks here).

Why I posted this ?

This because I am sure some3 of you wanna and use external converters along Paris and maybe have not digged so deap regarding these small latencies which are essential in a drum recording situation.

Regards,
DimitriosWell....you are going to need to measure the latency in another converter soon. I will try to ship it ASAP. I need to test it here first but that should not take long.. It looks like it is brand new. Very high quality. I was surprised, though I don't know why. They build great stuff.

I don't expect any problems.

;o)

 the mixer with those multishows.
 It's just improvisations and adrenalin with good help of much luck.
 It's really hard trying to smile in all those situations;-)
 Glad you survived:-)

> A few years ago after I bought BFD, I wanked on Angus big time, for a long
time about coming out with a percussion library. After a while he finally
recommended Yellow Tools as the best thing out there, probably just so I'd
shut up. Anyway, . he finally came out with a BFD percussion library a while
back. I figured that after all the harrassment I sent his way (good natured,
of course), in order to preserve any shred of integrity at all, I had to go
ahead and buy this. I loaded it up tonight and have been pitter patting

around with it on my Korg PadKontrol. I don't have Yellow Tools to compare it to, but I'm kind of a percussion junkie and I think this is nice.....realllllll.....niceeeeeee.....

those of you who are percussion freaks and own BFD will likely be impressed.

;o)If buying Vista, we'll be betatesters for Microsoft the coming 5 years, 'till they're again coming with a new system. Just look at XP, there's yet oceans of updates coming after so many years.

play on the forums.

g
PS

I built a bunch of drum maps to use within Performer that allow me to easily re-channel MIDI drum parts to alternate sources. This has greatly simplified and encouraged experimenting with drum set replacement. EZplayer Free is also helpful for this.

Regarding the email I sent you about Lexicon core 32 can this run alongside a Pulsar card that uses ASIO drivers ?

I know that the standalone way you have configured it uses the MMIO drivers.

So there might an interesting fact first Scope can recognise the MMIO ins and outs or connect them with adat optical.

Note that I threw away your scsi drive (man that was so loud !!!11) and installed the win Me which works with lexicon and DSPFX cards just great.

The concept is that simple...

With a pulsar card a cheap one Pulsar I (I sold one to Aaron !!) creamware card that has spdif in/out and 16 adat ins outs can serve as a digital patchbay for bot c ore 32 and DSPFX cards plus some great Pulsar Reverbs so that this pc can be an outboard heavy reverb hardware stuff !!

Regards,

Dimitrios

>It's interesting how bloated XP can be if you don't trim it
back a bit, as in what we do to maximize audio performance.

For example, my DAW rig boots up in just a few seconds; my home

PC, however (which is the one I use for e-mail, web surfing, etc.), I just let windows do it's thing - no performance tweaks - and yes this one has anti-viral apps, too, so that probably makes a difference, but several minutes after I switch it on, you can still hear the hard drive twiddling away, loading stuff... I can open Outlook & go through a several e-mails before I see a prompt that says my anti-virus has updated sucessfully, etc, etc. It's not a slow PC, really, but as I've gone ahead & accepted every update, loaded Internet ExplorerV7, and so on, it's progressively gotten slower, and slower.

Feels like a 386 now lol

For miscellaneous percussion it is hard to beat YT Culture. I was not that
impressed with the Latin Percussion set for EZ from Toontrack. Favorite miscellaneous
sample CD:
New York Percussion Studio, I also like StormDrum and RA.

>what are your 20 dubs and what are the 12 original trks? seems like
>kind of an unusual way of tracking. just curious.

Well, lessee... it's Bluegrass, and it's DeeJ, so I'm thinking
the 12 original tracks are probably something like:

- 1.) Kick
- 2.) Snare Top
- 3.) Snare Bottom
- 4.) Snare Side
- 5.) Snare Oblique
- 6.) HiHat L
- 7.) HiHat R
- 8.) Tom
- 9.) OH L
- 10.) OH R
- 11.) Scratch vocal
- 12.) Scratch everything else

And the overdubs are probably:

- 1.) Banjo neck
- 2.) Banjo body
- 3.) Banjo floor reflections
- 4.) Banjo chair (contact pickup - gotta get all the creaks)
- 5.) Banjo room L
- 6.) Banjo room R
- 7.) Acoustic Guitar neck
- 8.) Acoustic Guitar body
- 9.) Acoustic Guitar direct (piezo)
- 10.) Acoustic Guitar Overhead behind left shoulder
- 11.) Acoustic Guitar Overhead behind right shoulder
- 12.) Acoustic Guitar ambience out by the barn
- 13.) Fiddle close

- 14.) Fiddle distant
- 15.) Contact pickup stuck up the fiddle players' ass
- 16.) Bass amped
- 17.) Bass direct
- 18.) Both bass signals above combined & phase-aligned
- 19.) Original drum OH tracks re-amped & shot into the barn L
- 20.) Original drum OH tracks re-amped & shot into the barn R

....which means, of course, that any cowbell would have to come on the next overdub pass.

:DThere's always a tradeoff between getting the newest cool toys and stability. Any brand new operating system will have bugs, just like any new application will. I want to be running at least 2.6.18 on my linux laptop, that means running (at least) Debian 'testing.' Now then, Debian is elephantine in the way it updates, so 'testing' is probably more bug free than Fedora Core 'stable.' But I make that trade.

XP has been solid since about two months after SP 2. The two things M\$oft really did do right recently are XP and .NET. They aren't pretty, and nobody thinks they're cool, but they work and they're stable. The fact they're still issuing security updates just means that everyone on the planet is trying to compromise XP because it's ubiquitous, not buggy.

The problem with Vista isn't that it's buggy, it's that its just bad. Stupid. Ill conceived, poorly executed, with a surprisingly steep learning curve even for a battle hardened professional like me. It's almost everything bad about other OSs/GUIs + none of the good things about XP. It's really that awful. Honest, cross my heart.

mine is worth if I decide to part with it.

Anyone have an idea?

ICON remote with moving faders, Analog I/O card, 8 I/O digital card, 3 engine, reverb package, stereo mastering package.

Gene

Considering Neve 8816, Mac Ocho, Etc. I have several good reverbs."Gene Lennon"

I knew I would get one of these. LOL.

As the first poster with this message, you are entitled to \$100.00 off if you decide to actually get it.

Gene :-)For me, when there's still updates after about 5 years, there's still problems with something, whatever we call it;-)

I think an opening asking price of \$6k might have been a bit unrealistic though so it's not surprising that there were no bids.....

.....and this.....

http://cgi.ebay.com/TC-Electronic-TC-ICON-Remote-for-System-6000-XLNT-COND_W0QQitemZ130097213696QQihZ003QQcategoryZ41784QQssPageNameZWVWQQrdZ1QQcmdZViewItem

Sometimes Ebay is a good indicator of aftermarket value. Then again, sometimes not....especially high end products. the kind of money that that thing is worth is a lot of scratch to hand over to someone you don't know for a product you haven't seen in person and tested. If I'm thinking about paying more than \$2500.00 for a product on EBay. I'm also thinking of a plane ticket and rental car to wherever it is to test it and take delivery personally.

Neve 8816eh?. I've been thinking that if I don't get one of these , I will die.

;o)

>Are the problems you've found with Vista just on a user experience level, or
from a
developer's point of view (or both)? I'm just curious, not disagreeing.

The times I've played with it, I liked the GUI better than the semi-archaic
XP approach, or eye candy
of OSX - there are things in that area I think Vista does better and with
more appeal than OSX.
But, there is a difference between playing around with it and putting it
into daily use.

Some aspects of accessing system configs is certainly different from XP, but
I found it at least a little more logical
than XP (not that the flow and logic of XP's layout is that hard to improve
upon. And imho, OSX also has some
really annoying aspects as well, so nothing is really blowing me away at the
moment). Vista's Aero also runs native
on the graphics card now doesn't it? That's an improvement from what I'm
hearing from Vista users in the audio
world. However, it does seem like legacy support is the design guide for
Microsoft rather than innovation and efficiency.
If Apple really wanted to capitalize on Vista's poor showing, they would
release OSX standalone, but they won't.

Perhaps now is linux's time to make a dent in both markets. Time will tell I guess.

other PC gurus...

What's the sweetspot price/performance for Intel Core2 Duo?

Also, what's the recommended:

-Motherboard

-Fanless video card

-Memory

-*quiet* power supply?

Running Samplitude 9.11 on XP Pro with RME Digiface and 1 UAD-1 PCI.

This machine is primarily for mixing but sees some light VSTi usage. I

need it to handle 60+ track mixes at 96k, if possible.

Thanks for any input!

GrahamYou up for some company there Thurs nite? I seriously wouldn't want to
interfere with a reunion between old friends and would certainly understand
if this wasn'tworkable. I'm just thinking that this might be an easy way to
get some folks together in one room.

.....but then again, my thinking gets me into trouble on a regular
basis.....

Thanks, DJ! I've been trying to hold off as long as possible (4 years on my P4 2.53).

GrahamHmmm... so it looks like PCI slots are getting fewer and fewer with the new Extreme motherboards... as in not even existing on an Intel board! Wow.

I found these:

http://www.newegg.com/Product/Product.aspx?Item=N82E16813121_060

http://www.newegg.com/Product/Product.aspx?Item=N82E16813121_059

Looks like I'll be replacing a bunch of perfectly good ATA drives too, since they only include one ATA connector.

Ah, progress!

GrahamI was gonna make the plunge on a quad myself. Wasn't sure if I was going to go with a dual socket Xeon or AMD or a single socket Intel Quad. The AMD Socket F Opteron CPU's will be upgradable to the Barcelona Quads and the XEONs may be upgradable to Octo cores (not sure though) , but from what I'm hearing, the single Opteron Quads won't be upgradable on the same mobo to the upcoming Octos. Still, an Opteron Quad should last you a while and getting into the server level stuff is a bit pricier. I just about had myself convinced to go with a Tyan S2915mobo, two Santa Rosas and 4G RAM, but I'm in a circling pattern right now trying to weigh the necessities. I'm thinking I could do pretty much everything I want to do on this if I had a 64 bit OS with lots of RAM, but it will require a new 64 bit expansion chassis (or a lot of new hardware) to do this and that's another \$2k.

I think a quad Intel would be a great system and even the less expensive QX6600 should rock, most riteously!!!

;o)

Subtotal: \$1,691.92

What's this?Tax: \$0.00

Shipping: \$32.03

Amount Paid: \$1,723.95Hi Graham,

The Intel board rocks.

I would go for the Retail not the OEM. You'll get all the extra real
nice SATA cables and USB connectors and such.

You can try these to possibly save a few IDE drives.

http://www.granitedigital.com/catalog/pg52_satabridgeboards.htm

But in general I would recommend getting the newer SATA2 drives
especially the Seagates.

If you ever plan on getting a PT HD3 system then the ASUS P5W64 WS Pro
rocks. It's got 4 PCI-e slots in a row that work perfect for an HD3 setup.

chrisl@adkproaudio.com You don't need a passport. Denver is a *sanctuary city*. Everyone's welcome,
and we won't turn you in.

;o)
