A Yack stick? Sounds like something you shove down your throat
to make yourself throw up.

Damn, I hope he got rid of the Pace!

As I believe, there was a version that ran QuickTime, a version that ran native, and a version that ran on OSX. I hope it will still run on the old hardware, I have a lot invested, and I think it still sounds good. In the past they said they were looking at different hardware. I would also like to have a native version for location recording with a lap top. I also hope it has modern DAW features like delay compensation, but I have my doubts that any thing is coming for PARIS.

It is pure speculation, but I think the statutes of limitation, seven years, would be up in November or January, but I could be off by a year. Time will tell.

>That's a powerful combo Thad(LIVE & SX), but an updated Paris for Mix and
Recording Engineers is very much welcomed.

Not everyone wanted not need all of the goodies in SX. When it comes time
to mix the \$\$ jobs, Paris & Pro Tools are no#1 in my book. Notice that I
did not say editing.. That dubious spot belongs to SX/Nuendo hands down..

So, if an updated Paris did not have a midi sequencer, vsti hostingBut
HAD: Total Delay coompensation, even more flexible patchbay routing, and
proper Asio2 plugin handling..Wow!!

Native submixes in 3.0 sounded nothing like hardware submixes... though you never know. Maybe if ID hired the Ensoniq code team you might have something. I'm not holding my breath.

[http://news.harmony-central.com/Newp/2007/PreSonus-Monitor-S hipping.html](http://news.harmony-central.com/Newp/2007/PreSonus-Monitor-S%20hipping.html)The verb is called "spacer"... I can't remember what the delay is called.
Everything I've played with so far sounds at least pretty good and most of it sounds really good. Question: on the Neve eqs, how do you adjust the gain/cut knob in the middle of the the frequency selector?

Thanks,
Chris
