>Hi Guys,

I just checked, and you can use the high-pass filter in the stock paris eq to filter out the dc offset. It has to be after the effect. Placing an eq before the crossover doesn't help. I think it's probably best to use the stock eqs instead of embedding another eq in the effect if only to conserve DSP resources. The stock EQs use different, reserved chips, whereas if I embed the eq in the effect, it will take up the more scarce effect dsp.

Let me know what you think, though. I can add another eq if the consensus is that we should go that way.

All the best,

Mike

hehe

I just started running vista and I gotta say, yeah baby , it sucks! don't know if this makes any difference, but i use the vst version of the Paris eq, and I've noticed some weird stuff going on with low freqs, too... what i hear is what i'd describe as a "sputtering" sound. and you don't even need to be rolling at the time, either. So, i don't use it on anything requiring adjustments of lo-mids & lows.

>HI John,

When get under the hood you can make it at least look and somewhat act
like XP. But its performance for audio application is so poor still it's
still a waste. If at least equaled the performance of XP using the
same hardware we would have switched to it already. Until MS can at
least do that it will never be used by a professional musician.

>I agree with Neil .I am not sure exactly what triggers it,but if I cut or
boost much low freq (100 or below)on the Paris eq,most of the time it gets a
strange distortion,or artifact to the sound...The EQ plug that works with
multiple instances and sounds great with Paris is the PSP MasterQ..hardly
any noticable latency either. I was referring to using Wavelab as the
mixdown,and removing DC at that stage.

>Well...

I do know that Apple have been VERY generous to our National Broadcaster.

They have started shooting with Panasonic Pro P2 type camera, and the powers that be decided that Final Cut Pro would be used throughout the network, (with some convincing by Apple, me thinks).

Before that it was PC / Avid based.

Consequently, the network had to be fitted out with Macs, HUGE order), including using their new Media server software that no-one in Australia had yet implemented.

As a by-product of that transition, Apple offered EXTREMELY generous deals to the staff on any Mac product....

Don't tell me that's not buying your way in.

Martin Harrington

and Apple will be irrelevant.
As may be AT&T, Verizon, Sprint, etc. In my opinion MS is making what may
be a last play
for anyone to challenge Google, outside of the federal government
potentially (antitrust, though doubtful).
We may eventually look back on these Apple vs. MS debates and wish we still
had two sides to debate about....just a guess.

Dude, I don't really want to get into this, but the fine print reads that pretty much everybody agrees with you on that. What they don't agree on is your claim that Apple aren't similar.

Yes, the latest OSX is much nicer than Vista. It's plausible that Apple's business practices are not quite as bad as M\$. It's very highly plausible

that this is because they don't have a monopoly with which to exercise that power.

Most people I know agrees that M\$ and Apple both act extremely suspiciously whenever they get the chance, with M\$ having the upper hand because they have the upper hand in muscle. How you can claim Apple have never tried to buy market share I just don't get.

Just because one company is very evil doesn't mean you are forced to become blind to the evils of the other. Most people on this group see evils in both. I have seen you criticise Apple, but it's very very rare. They do a long more wrong IMHO than you give them credit for, and claiming they don't buy market share, well...

<rant off>

Cheers,
Kim.I don't work for them, except as a freelancer, so I get zilch.

>Ok, can you give me a legitimate example of Apple buying market share? I have seen Apple do some things strait out of the MS play book, but it's not vary often.

Somebody vary close to me was an executive at a software company (N) and was over their HR department. MS was hiring away (N) top software engineers by giving them 1 to 3 million dollar starting bonuses, (bribes). They hired way (N) intellectual technology to work on IE, and they gave IE away for free to drive (N) out of business. How many times have you heard of Apple stomping their competition to death? How many times have you heard of Apple coming in to a market and giving products away for free in order to drive their competition out of business? How many times have you heard of Apple threatening to pull all products from a VAR for installing a competing software product on a system? To say that they are the same is not true. MS copies from, steals from or buys out from their competition at their price, and if that doesn't work they crush their competition, they almost never play ethically. When it comes to ethics and business practices these companies are not even close.

Why does MS need Yahoo so bad? Isn't MSN and all their products good enough?

Why must they do a hostile take over of Yahoo? It will be interesting to see how many products MS gives away for free if they get Yahoo. It's not about competition, it's about conquering. MS must control all. It's an ego trip for them.

practises, yes, but they have a smaller budget so
what do you expect?

Why does M\$ need yahoo? Why did Apple need any of a number of companies they
have absorbed? Why does society think we need to grow all the time when the
size of the planet has been fairly stable since its existence? Got me stuffed.

Like I said I don't really want to get into this.

Cheers,
Kim.

> stomping their competition to death?

There's nothing unusual about that in either the tech industry or higher end corporate jobs. Yes, MS pays well, because they are making a lot of money - but Google pays well also, as do oil companies. There's nothing different about MS giving hiring bonuses to high end engineers than Intel, Cisco, Yamaha, Avid, a biotech firm or anyone else doing it. I was in engineering for several years, and was offered significant stock options when interviewing with fast growing, up and coming networking companies - that was standard in that market - signing bonuses are as well - heck, it happens every week in the NFL, NBA, MSL, music industry, etc. In the corporate world it is routine for highly qualified people to be contacted by head hunters offering bonuses, stock options, higher salary, better advancement with another company. There's nothing unethical about it unless the employee just does it to use as a bargaining chip for more pay at their current job.

The point is - if you are worth that much to someone else, then they must really want you, and you had better deliver.

> Why does MS need Yahoo so bad?

Because Google is going to stomp them, Yahoo, Apple, AT&T, Sprint and a few others if they don't.

My .02.

DedricCome now ... if we're talking ethical standards riddle me 2 things, early history:

How did the Apple Lisa get it's name?

Who fired Steve Jobs, and why was he pushed out of the Apple Lisa project?

The funny thing about humanity and ethics is they usually leave the room to make more space for money and greed when the word 'corporate' gets involved.

Now, I'm not sayin Gates is a saint (or Ballmer), hardly that, but it's rather obvious that Apple doesn't mind strong arming folks either. Let's take iTunes. Apple and Apple Records had an agreement. One conveniently forgotten by Jobs that he later got to pay for. Jobs will tell you he saved the record business. I bet the fat cats on boards at labels have a different song. (On the other end, the Zune is a failure IMO) My perspective is different than both those parties. Everybody has their truth. But to say Apple or MS either one are ethical is a tall order, and it's strictly a matter of power to push the smaller ones around. MS just has more power.

Just a little levity."Kim" <hiddensounds@hotmail.com> wrote:

>Dude, all I'm saying is that we have two evil companies, and one has more
>money, hence power, than the other. Hence the one with more power obviously
>is in a better position to do all this evil stuff. Apple have less examples
>of questionable business practises, yes, but they have a smaller budget
so
>what do you expect?

Evil may not expand in proportion to the money injected into the equation, there is also the corporate culture involved. Apple is expected to support the product better than others and people pay more, in part, based on this expectation. Now, they have dropped the ball more than once, but I have also seen them be very attentive and supportive, giving direct phone numbers to contact the techs about the problem and responding quickly and competently. I have never once seen Dell or MS do so. (the only PC folks I have experience with)

Honda and Toyota are making much more money than GM is, but don't try to tell me the quality of the product is the same, and that arises directly from the corporate culture.

Companies are not all the same; only limited by money from doing evil.

That's pretty cynical. All too often true, mind you, but not always.

best

DC

ps having said all that... DAMN I hate online platform arguments!
I mean who really cares?"DC" <dc@spammersinhell.com> wrote:

True, to an extent. Apple are certainly not beyond both ends, and to an extent it always depends on who dealt with the area

which involves you.

>ps having said all that... DAMN I hate online platform arguments!
>I mean who really cares?

Well that was more or less my point. I mean we seem to have reached a point in many of these arguments just perpetuate. I just wanted to point out that no company is beyond doing good or bad.

I tend to think we should put our efforts here into the specifics of the user experience in the O.S. moreso than the underlying politics, which belongs on General one would think.

Cheers,

Kim.Aaron I'd love to here your version of the two events. It's obvious that Jobs was a driven men with a vision of where he wanted his company to go, and it's obvious that John Sculley didn't agree with him. Jobs was anal and autocratic back in the early 80s, that actually was a management style back in those days, and obviously not a vary good one. I'm sure some people back in those days would say he was driven to insanity, I'm sure he would say his ideas were Insanely Great.

Jobs and Sculley had to different visions of Apple. Jobs try to regain control of his company Apple in a board room take over, Jobs got the short end of the stick and quit Apple.

Who had better vision and was a better CEO for Apple, Jobs or Sculley? You can't argue with success.

So how is Apple as a company unethical?

>So how is Apple as a company unethical?

Any chance we could move that bit of the discussion to General?

Cheers,
Kim.Apple Computer was sued by Apple Records in what I would call a greedy and frivolous law suit. It's a big stretch to say that people got the two companies confused leading to a loss in sales. It's ridiculous to say that Apple records has an exclusive right to the common name Apple. That would be like a zoo saying they have an exclusive right to the name impala.

Apple Paid Apple records 20 million to settle out. Apple did agree not to enter the record company business, so Apple records sued Apple computer again when Apple started iTunes. Is Best Buy or Circuit City in the the record company business? Well neither was Apple Computer. Apple had a right to resell music or recordings just like best buy or mp3.com, there was nothing unethical about it. Apple records filed another frivolous law suit against Apple computer. I do not believe the results of that suit were disclosed, however it sounds like Apple Computer did Ok.

By the way, wasn't this about Vista? Vista still sucks;)

quite a bit further, Microsoft
stole it!

It's a well known fact that Apple had a development license deal with MS
to develop a spread sheet for the Macintosh OS. Apple provided MS with the
Mac OS code, MS saw what Apple was doing and how they were achieving it,
MS copied what Apple was doing. Gates did not beat Apple to market, that's
fiction, The Macintosh was released on Jan 24th 1984, Windows was not released
until Nov. 20th 1985 almost two years later. MS copied and ripped off Apple.
A judge thought competition was good for the people.

How anything, let alone a couple of monopolistic computer companies, can get someone riled up as much as you get, is beyond belief.

You act like Apple is your baby, and you'll fiercely defend it to the death

BTW, regarding apple being sued by Apple Records, (and quite rightly so,)....

You just watch apple pounce on anyone that dares copy their hardware or use any resemblance to their name.

I go to start the splash screen comes up followed immediately
by cannot initialize error code 1/1. In checking my card it seems to not
be completely seated but it is as far as it can go. Might I have to shim
the MoBo a little. It's not very much, maybe 1/16 of an inch. What else could
it be. Thanks Jim Sorry James..

Not meaning to get personal, Sorry for that.

Yes, I do run Leopard on PC hardware, and it runs floorlessly BTW, but I was
running Vista, and my Business machine at home is running Vista.

I have no complaints really with it...except it's a bit of a memory hog, but
I really like the way that OSX functions..it all works, pretty much without
extra plugins...still needs some though.

Vista is still a little kludgy and when running a few intense programs
together, really bogs down, where leopard seems to fly with the same
hardware... Go figure.

I run Pro Tools in my studio, and that runs way more stably on Tiger, (no
Leopard drivers yet), than it ever did on XP, although I haven't got round
to getting many OSX plugins yet.

The other program I'm starting to respect more is Soundtrack Pro, Dinky
graphics but well appointed especially for the Post work that I do.

Again, sorry for getting personal, but maybe it's time to give it a rest....

Thanks,

EdnaAaron, I don't disagree with any of this, but what is left out is that Xerox gave him the right to use the technology for one million dollars worth of Apple common stock. A couple of other things to add to this is the Apple Lisa had ethernet and a mouse, both created at Xerox PARC. Jobs wasn't just kicked off the Lisa project, he was also kicked off the Macintosh project around 1985.
