kind of
crazy in about two weeks, as my wife is due with our first child (a daughter
named Ruby.) So, it'll be nice to take leave from work for a few weeks and
swap it out for little to no sleep!

end, in case you didn't know), my college roommate got me hooked. An

pieces featured on the Te Deum disc blend this mood with bursts of joy and warmth as well (at times venturing near Morton Lauridsen tonal territory.)

lot of his compositions, which give them that very old/timeless sense. It's just good, good stuff.

Best wishes and prayers for your wife an little one.

I can tell you there is nothing better or more wonderful than the birth of your child. And don't believe anything your wife says about divorce during labor!

It's

>just good, good stuff.

I will order it. Thanks. I need more! Funny how his name is pronounced like Neil peart in Rush.. I wonder...

Let us know how the big day goes.

None. I just picked them out of a hat. All companies fall down on customer service at times. and they did for me, but it was years ago. There's lots of other candidates....

It's

>just good, good stuff.

BTW, do you have a particular release of Te Deum that you like?

DCI'm about to put together some new PCs for my studio and I'm undecided between making a fan-vented box for them or making quiet PCs. I've never done either; I always kept them in closets, but in my current studio that is an inconvenient option.

One advantage of quiet PCs is that they will be out in the open for access to the front, back and insides, and they will take up less space. Building them will be more expensive, but that is a minor consideration.

A box could be used for several generations of PCs, presumably. It would have to be big enough for at least 2 machines.

DJ, I know you go for an "open matrix" design, or in popular argot, "going commando". How do you deal with noise?

Any suggestions/advice from those who have used either approach appreciated.HI Bill,

If you are building a new machine you can make it really quiet without having to use a ISO box. There are allot of high quality quiet components available that will keep machine running 30db or lower under a full load.

Good DIY parts

CPU heatsinks-

<http://www.zalman.com.tw/>

Great heat sinks but the cases suck.

Cases-

Tower

Antec Performance One cases

http://www.antec.com/us/pro_en_performance1.php

very good air flow and cable management

rack mount

Chenbro

http://usa.chenbro.com/corporatesite/products_detail.php?ser no=2

Fans-

Noctua

<http://www.noctua.at/main.php?show=produkte&lng=en>

quiet and good CFM

Acoustical Foam

http://www.acoustipproducts.com/en/acoustipack_std.asp

Power supply-

Thermaltake

<http://www.thermaltakeusa.com/product/Power/ToughPower/w0163 /w0163.asp>

Antec-

http://www.antec.com/us/pro_p_NeoHE.php

chrisl@adkproaudio.comDC,

It sounds like you should try to find a way to play this sound in your head yourself. Nothing wrong with being a band leader or producer and getting people to do your arrangements, though. You may only need a collaborator and then things will take off.

Good luck!

GrahamI need to pull out Bird for a few days and see if I can hear it any better.

It could all be a dream. I played a new song to someone in a dream a week ago, and woke up and could remember what I did on the guitar to play it. Sooo I went and played it and it did not sound at all like the music that came out when I did the exact same thing in the dream...

Can we dream in open tunings?

arrgghhh!

they are in a room about 15 feet from my mixing desk with enough various
kinds of long cabling stretching across to the door of the machine room from
the desk area to be hazardous to your health should you trip and fall.

I call the area behind my racks and desk "Jumangi" A quiet computer would do me no good at all
unless I had 15' long cables
from the comp to the Magmas which sound about as loud as a small aircraft
idling in the machine room.

B96DC-FNLIT/E3 M2OU12B

From these guys:

<http://www.bittree.com/>

here's a pic:

<http://www.bittree.com/productdetail.cfm?productID=111256>

They use connectors on the back so you can repatch or reconfigure those connections easily, and you can setup/change normals from the front with jumpers under the designation strips.

Very nice stuff. Not the cheapest though. around 1100 or so. Fantastic support.

Whatever you get, remember to use only zero-residue contact cleaner to keep them and the cables clean. Never use contact preservative of any kind.

YES! We only use gold-contact Neutrik XLR jack panels and XLR shorty cables for mic patch bays.

DCThanks guys. All the info is much appreciated. Dc, I use to setup the ADC bays that you use a puch tool with when I worked in TV. I liked the design but didn't know if they were as flexible in terms of dealing with Normal, Half Normal, etc.

Any thoughts?

Tyrone

Thanks Dimitrios.

The Mastercard in the .cfg is looking for a number not a letter.

Mine always has read "0". I think that's what it supposed to be right?

I'm going to try the other computer to test the hardware one more time.
Maybe this will become the rig of choice... no pace you know and only =
one install
at C:Paris Pro. Clean from the get-go. It's an AMD 3000+ which should =
be fine.

I'll post when I learn something.

Tom

"Dimitrios" <musurgio@otenet.gr> wrote in message =
news:471c67f1\$1@linux...

Hey Tom,
Paris cfg file is in Paris folder.
Just open with as a text editor and change the mastercardout to =
whichever
letter will work alright.

Next what I would do is install over the minimum setup
exe file (subsystem effects) to your new moved directory exactly !!

Then I would for sure delete from the Paris folder the default.ppj =
project

AND the untitled project.ppj to.

Let us know !

Regards,

Dimitrios
