> Any recommendations? How old is your system? Is it time to change the battery that's feeding the bios alive? Normally, the life of the battery is 4-5 years. If you have some partition utilities that can start the machine in Dos-mode, you can see if the boot-partition is lost. As I understand, you have not a Ghost copy that can save your day if you have trouble with booting. If it's just that the partition will not start, you can try a repair install with the original CD, if it's WinXP you're using.

Hope there's something to use here and good luck.

Erling
