Tascam FW unit on a PCI TI chipset card reliably at about 10 mSec using all 18 I/O's on a nVidia based mobo, AMD 3700+ dual core. Anything faster and it craps out. SONAR seems to really like WDM models better but I hate the latency that presents. Haven't tried Reaper on that setup as I build very specific systems to do what they should and nothing else, and being in the middle of projects isn't the time I want to experiment. YMMV.

FWIW, and I may have gotten a lemon, I had horrid luck with Presonus FW.
