could have ever hoped!!

>

>If you read any of my earlier posts about this amp saying that it didn't
>sound like a Marshall, I found and fixed a major bug this morning that affected
>the low end of the amp. It has Marshall growl and smoothness now!

>

>One thing to be aware of is that it will clip internally if the gain staging
>isn't done right. If the preamp gain is +20 dB, the Main out gain must
be

>-20 dB or lower. I could have enforced this in the UI, but it would have
>been a lot of coding that really shouldn't be necessary.

>

>Please, please, please pay what you can if you download this. It was my
>first port of code written for the DP Pro, and there were some really critical
>differences that took a lot of time to figure out. My next task is porting
>the hall reverb from the DP Pro. If you value this software and want to
>see more, please send some \$ my way.

>

>As always, you can download the Amp at www.ensoniq.ca. just scroll down
>to the bottom.

>

>Also. please let me know what you think of this and if/how you are using
>it. It means a lot to me to know that this stuff is being used.

>

>Cheers!
