But if I vote for all the candidates you oppose, will it still be important?

NeilVote for what? They're all idiots with no plan. Show me a candidate with a written plan that shows clearly what he/she stands for, what immediate goals they have with a roadmap, what budget they propose to do it with and what timeframe they have. Oh and the milestones to indicate their progress along the way.

Hmm.....NONE of them.....surprise surprise

couple of songs with acoustic piano & voice. Since I don't have
an acoustic piano, I'll do the mix here, but we're going to be
doing it out at my friend's studio in this room:

<http://www.sonicranch.com/sta4tracktoproom.html>

Probably going to use 414's on the Piano & my Earthworks TC-30
Omnis for room mics, but the most interesting part will be
a/b-ing the following mics on vocals:

- 1.) A Stephen Paul-modded U-67 with the submicron diaphragm
- 2.) A Soundelux 251-C
- 3.) A Mojave MA-200
- 4.) A pure vintage c-12 if I can get them to break one out

If I can get a few worthwhile lines on each mic, I'll post some
clips & signal chain details.

Neiljohn you said it brother!Its too bad there isnt a* none of the above*
vote.they are ALL corrupt idiots.I have a feeling this will be a
longgggggggggggggggg ass thread.

>Wow, what a place man....!!!

> <http://www.sonicranch.com/sta4tracktoproom.html> Tonight I started playing back some audio with the Creamware hardware for the first time. I opened up a template in the Creamware patchbay and started playing back a track in Wavelab. It was one of those *holyshit!!!* moments. I had heard this track many times (I remastered it) and I was sitting there listening to it through the creamware card thinking, "man, this sounds great!!!...what's up. Then I started looking around in the patchbay template and discovered that the PsyQ and Optimaster plugins were part of this template. These FX are *very good* We're talking UAD-1 level stuff here, maybe better, as far as these two particular plugins are concerned. I don't know why but I didn't expect this for some reason. I'm still waiting on a couple of stragglers that haven't shown up yet in order to complete the wiring in of the studio, but the first impressions of the Creamware mastering plugs are very positive.

DeejIt would be worth it to buy one of these cards just for the reverbs. This is top shelf stuff. I'm not kidding. These are in the same basic league with my Lexi PCM 91. Now I know why Dimtrios was willing to sell me his Roland R-880. He had a Pulsar so he didn't need it anymore.....LOL!!! I'm sorta floored by what I'm hearing here.

;o)

>I will get around to it next week. I've got this thing patched into a Paris vocal track right now routing via ADAT applying the Vinco (stands for "vintagecomp", no doubt, and looks a bit 1176'ish) on an insert. No audible latency at all. Has the ability to get sort of LA-2A'ish or 1176'ish depending on whether your are using it in Peak or RMS mode.....and no latency.....did I mention that?

Right now I've got things routed to where I'll be able to apply 8 of the Creamware FX as plugins "per Paris submix" over 4 x submixes and I'll be able to use the Creamware reverb, my Lexi PCM 91, Quantec and Roland R-880 on any rack across the 4 x submixes by using an RME ADI4 DD and daisy chaining in and out of an adat module in each MEC.....or at least I will be as soon as the D-Sub - 4 x AES cable for it shows up.

Thanks!

This is a transfer from another owner and not related to my EDS card.

It just a softwaretransfer.

OK I will try that...

I have to open the computer...

Why don't ID give the info.

It should be so easy

Are they arrogant....?And to me I don't care if they are of any party. I just want specifics.

Anything else is just rhetoric. Then I see the news saying Barack Obama is the new great thing. So I watch him on Larry King and he's just talking broad brush strokes pie in the sky. Sorry Barack, but if you can't lay it out in detail I'm not interested. Oh, and I reserve the right to QUESTION your detail and ask for more substantiation of your proposal as if you had one.

John

FINALLY! Someone who's not anti-puppy! You've got my vote.

:)Hi All

Is there a proper method to installing FXpansion (DJ's zip) i.e. where do you put it how do you access it blah de blah

The only reason I ask is the last time I tried to install it, it totally hosed Paris requiring a complete reinstall.

Thanks

Don"alex plasko" <alex.plasko@snet.net> wrote:

>I wonder what that complex cost. I want one!maybe if i win

Man you don't wanna know how much, I'm sure... he's added to it over the years. It started out as a bomb shelter back in the cold-war (most of the rooms are partially underground) with just the space that's now this room:

<http://www.sonicranch.com/sta5trackmainroom.html>

....and also what's now this room:

<http://www.sonicranch.com/sta1controlroom.html>

Then at various times it was a wine cellar & chinchilla hatchery (hence when anything used to mysteriously go wrong during a session we'd refer to it as "the spirit of the chinchillas" causing it to happen). Then when Tony converted it into a studio it was just the control room, the main room &

that upper room where the piano is. Later, when I was still working there, is when he added the back room, that you can see through the main room in the pictures on the first link, above and also in a wider shot, here:

<http://www.sonicranch.com/sta7trackbackroom.html>

Then, maybe about five years ago, IIRC, he added this room:

<http://www.sonicranch.com/sta6trackstoneroom.html>

Then, in another building on the complex, added these areas:

<http://www.sonicranch.com/stb1cntrlroom.html>

<http://www.sonicranch.com/stb2trackingroom.html>

Then finally 2-3 years ago, started building this space:

<http://www.sonicranch.com/bigtrackingroom1.html>

Which kinda sat fully-constructed, but unfinished inside for awhile - although they still used it for tracking an occasional large thing or two, like a choir once, that I'm aware of, & various other stuff if they needed a supplemental space (they fed the signals into the main control room, since that area didn't have one of it's own 'til recently). Then finally, a few months ago, he finished off the control room for that space, which is this:

<http://www.sonicranch.com/neve1console.html>

<http://www.sonicranch.com/neve2monitoring.html>

<http://www.sonicranch.com/neve3outboarde.html>

<http://www.sonicranch.com/neve4controlroom.html>

<http://www.sonicranch.com/neve4controlroom2.html>

Not bad for a little studio out in the middle of nowhere, huh?

NeilVery cool studio...I am jealous

Hey now, it's not like I get to use this place for free - he cuts me a little break, yeah, but it's a business, you know? And I gotta give him credit, he keeps the place booked.. when I was asking about any weekend times coming up that might be available, it was: "Well, we have this coming weekend, and then nothing 'til February". How many studios can say that? So yeah, he's got a few bucks, but it's not like this studio is just a giant toybox for him, either.

Neil Which hardware compressors & reverbs are better vs. Paris FX?
My question is about all level, from low cost Alesis to grand Lexicon 960. Well heck, Dick Cheney's brother is a surveyor in these parts and I figured if he got elected he would give no bid contracts to Halliburton to suck prairie dogs out of their burrows and send them to fight in Iraq since they are probably smarter than the soldiers over there.

directory !!

Never use them again.

It causes the the eds compressor and NoLimit to mute the audio and sometimes
to ditort the audio.

Hope this helps...

Regards,

Dimitrios Ok, so it took ten days of total frustration, but I have succeeded!

My HP dual core is running Paris flawlessly, and it is awesome. This computer
is blazingly fast. I was processing files in wavelab that would have taken
4-5 min on my old cpu, in 52secs.

As I have faced every error known to man during this install, and fixed them,
if anyone has questions, please ask.

Thanks to everyone who helped along the way.If you install it and it crashes paris, just open it again and click "full reset" and exit. Paris should be fine after that. Then find the offending plugin by adding one in at a time and running Paris after each addition. Tedius, I know, but you'll find the problem.

This is really interesting , What is your setup ?

are you running Core 2 Duo ?

Mobo etc....

Thanks - and congratulations !!

I am very interested in any details you would like to share.
GeneHi Mike,
I read some of your other post's , and see this
an AMD rig.
I'd love to hear how this came together for you :)

>Well, first I got the EDS cards on their own IRQ's but that didn't seem to matter. I would still get transport "freeze". I even moved the cards to other PCI slots and system info said they had no conflicts/sharing. The only way to fix that is to change the system "mode" from ACPI to the second option which is A.C.P.I. spelled out. For some reason this mode changes the IRQ's from the previous 17&18 to 7&11 which gives them more "priority". After that change I never had any transport problems. The next problem was getting an error "paris.exe has caused a problem and needs to close" on exit or switching between projects. I had seen this posted before, but I never saw a fix for it. Well, here it is... It is a plugin error. I installed each plugin one at a time and ran Paris after each install. I go all my DX plugins in wihtout a problem, well except for a few Sonar plugins that I had never used before, like the tts-1 and CWtuner. When I went to install my VSTs that when I started getting the error. Paris didn't like Amlitube and a couple other VSTs in wrapped with the fxpansion in XP. I played around with adding/subtracting plugins in my VST folder, but Paris just didn't like using the fxpansion wrapper in xp. Strangely enough, I was able to create a folder I called "Paris VST" and copied my VST plugins into and set the Paris VST path to this folder wihtout wrapping them, and it worked. Paris is running both VST and DX natively. Paris on a machine like this is awesome, I know my last computer was pretty slow by today's standards, but it was optimized for audio apps and had quality components, but this HP is running circles around the old cpu. Overviews are calculated instantaneously, rendering is done before I can even open the background task window, and I can tons of plugins without any hint of processor problems. Hope this helps. Here is my new system stats...

HP Media center 1540N
AMD x2 2.2 GHZ Dual core
2GIG DDR SDRAM
2000MHZ FSB
SATA 250GB 7200rpm HDD system
SATA 200GB 7200rpm HDD DATA

but the reverb just

is not as good as a TC Electronic M3000. I think
the TC M3000 is the best out there for the money.

Still, all things considered, the Paris effects are
pretty amazing.

You may also want to try a Real Nice Compressor (RNC).
They are incredible for the price.

peace,

Chris

a dog house than this bunch of idiots have? Which genius have I overlooked
?

Actually, I was going to build a dog house today and I did a complete plan
and did a cost list before I bought the materials and the house I was building
was going to be \$200 so I bought one for \$169 that suits me ok. So here
I am costing things out before I execute them. What a concept !!

You might even be able to change the world, but wait, you could never get
Paris working properly, so maybe that's not such a great idea either.

>folks- particularly you California folk...

yes, many of the "politicians" are crooks. But they are in a system that rewards them for being what they are. That's why they're there. The system works for them. Not necessarily for us.

There's a proposition on the ballot in California, Prop 89, which would change the system. "Politicians" are most often "telemarketers," using hours each day to solicit money from folk who then have leverage over their actions. Prop 89 destroys this connection by allowing folk with only grass roots support to run a competitive campaign against big-money-backed candidates.

Impossible, you say? Similar systems are working at this moment elsewhere, successfully. Most incumbents are against the idea, because, as I said, they got where they are by using the system in place. The last thing they want is more competition.

Likewise, those funding the current crop of elected officials are pretty much against the idea, since they'd lose their leverage over said officials. This makes the whole deal quite an uphill battle. Think of those dollars flowing into the system...

Websites to check:

<http://www.89now.org/>

Bombastic but clever metaphorical video of the problem:

<http://www.89now.org/media/pounding.php>

I now return you to your regularly scheduled entertainment.

-steve

PS - another reason to vote is Debra Bowen, for CA Sec. of State. She's been

almost single handedly championing this proposition, as well as trying to tackle the abominable hackable voting machine problem. She's very sharp. You make a good point here.

The other side is the problem millions of Californians have with being taxed to pay for political ads for issues and candidates they would never support.

This goes against many people's conscience.

The issue of money corrupting politics is totally true, yet, I don't think this is the answer.

And yes, it is hard to get a campaign in gear without big corporate supporters, but it certainly has been done. Remember prop 13? I think the free market is the best solution here, not more taxes.

Just a thought.

And you have a great point there as well, Don. No one like being taxed for things they don't want. But you already are, if you think about it.

I see where it was estimated that Arnold's special election cost \$300million. Where did that money come from?

Right now, contributing to candidates is the best investment an industry can make. Thousands in contributions can and do result in millions in benefits.

Arnold said it best himself when he was running - "special interests have a stranglehold. The money comes in, favors go out, the people lose."

Have you seen what is proposed in prop 89? I seem to recall that it works out to about \$5 or \$6 per person.

from the prop 89 website: (in their FAQ)

increase in the corporate tax equal to 20 cents for every \$100 of profit (0.2%). This would restore the corporate tax rate to a figure lower than it was from 1980 to 1996. Individuals and the vast majority of small businesses will pay nothing."

Folk tend to pay attention to those who writes them their biggest checks. It's only human. Campaign costs are hugely larger than elected official's salaries. Wouldn't you rather they work for you than for the folks who subsidize

their campaigns the way things are now?

And here's the clincher. Follow the money. Guess where it comes from now? You. You're paying it now. You just don't realize it.

You buy services from industries who then take the money and buy influence with candidates. With your money.

The two most significant changes in states where this system is used are
1) non-rich or non-connected folk have actually entered and won elections, and
2) the total amount of money in campaigns has actually gone DOWN.

>You're not an idiot John,
but.....arghhhh!!!! Never mind;-)
I mean it's a good idea to vote, trying to change America a bit for the
worlds sake. We can all be small wheels helping the bigger ones to go around
and make a better world for us all, wherever we're living in our great,
little world of today. Especially when we have got the choice to vote, where
so many good people around the world have fought for up against the years.
We have all heard the words "Human Rights" up against the years, but how
many of us are doing something with it? Sarah is one of them trying to do
something, where some other better wish to build or buy a doghouse for their
own world;-)

The freebies Chuck has once released is causing this and not NoLimit !

For the ones who have this eds compressor and NoLimit problem this is a Nopain
solution!!

Cheers,

Dimitrios

"Dimitrios" <musurgio@otenet.gr> wrote:

>Regards,

>DimitriosI went to the sec of state site and read their summary of the initiative. There are parts I like, but some I do not.

It is here:

http://www.ss.ca.gov/elections/elections_j.htm#2006General

Here are a couple of comments:

✔ Contribution Restrictions for State Ballot Measures

efforts to support or oppose ballot measures.

I am nervous about this. Giving money is one way of expressing my opinion. It is a form of free speech. I'm not sure we should restrict this.

corporations to support or oppose ballot measures.

Wait a minute. If your company is targeted for more taxes, as tobacco and oil companies are in other measures, is it fair to limit your ability to respond effectively? Is that not a form of taxation without representation?

Surely we can conceive of bad laws written against even companies we do not like can't we? Should we muzzle those most affected by legislation?

✔ Higher Corporate Taxes

institutions. For corporations, tax rate would increase from 8.84 percent to 9.04 percent. For financial institutions, tax rate would increase from 10.84 percent to 11.04 percent.

Checked out the number of companies leaving CA recently? My own brother had to leave San Diego and move to Indiana because of ill-conceived environmental laws and brutal taxes in his industry. The entire industry (furniture manufacture) is extinct in CA.

Now we see him once a year, and the companies are polluting worse than they were! We need a more welcoming business climate here, not higher taxes.

And even if my cost is 5 bucks, I do not want to give one nickel without consent.

There are plenty of problems with the current system, but I am not sold on this solution.

DCIf noone wants the Pulsar II card I can keep this and sell the Pulsar I with the following software:

Pulsar Software
Scope Fusion Platform
Main Studiotools Package
Effects Package 1
Synthesizer Package 1
Synthesizer Package 2

STS-2000P

As soon as this card get registered you can download the Scope 4 version.

Selling for 250 \$
Regards,
Dimitriosgosh mr. disgusto, that's one amazing story.

this, time for more John Kerry jokes.

JohnHi All

If I want to do the equivalent of rendering without plugs or Nuendo
dynamics, level or pan settings how do I do this?

reason: I've got a slew of little bits and pieces all over the place and
need a "0" start point as Paris won't read the time stamp on these files

DonFirst, thanks for help i got from this newsgroup : it allowed me to built
this first paris XP rig without fighting much.

So now, if someguys are looking for information to upgrade, or start, here are my two cents :

after a few days of use, no crash. For sure, it's easier to make cubase running , cause you don't have to read forums and parisfaq. but if you plan to use paris, it can work almost like every DAW.

SO :

one MEC, no modules, one EDS, C16classic.

Hardware :

- MSI neo2 platinum (nforce3ultra chipset). ==> this one is a goooood mobo for audio apps.
- athlon 64+,
- AGP nvidia (MX440) graphic
- one 7200 rpm IDE drive, alone on his controller.
- another card (Maudio audiophile)
- the EDS was first sharing IRQ 19 with graphic nvidia app, it was running, but i put it on a non shared IRQ anyway.

Software :

- windows2000 sp4 last directX version, just audio app.
- paris 30 and FX subsystem installed direct under C:\
- wave bundle (C:\program file etc)
- SIR and blockfish dll under C: not wrapped for the moment

some little things to fix :

- it does'nt like blockfish comp : i had a 'diskslow error' with only 5 tracks (!!) at the moment i turn it on. i increaseed IO @ 96K and cache @ 40 Mb and it was OK, but blockfish is looks looks a no no
- when i quit paris, it close normally, but paris.exe still run. The system does not freeze and is usable, until i try to kill paris, or to reboot normally : on/off reboot required. It does not occur if i quit paris without having worked on a project.
- TP queue error if i turn jog when paris is playing : just a "close / open" project is required in that case.

I have no opinion for the moment about the way it sounds, in comparasion with standard native DAW, but i fell good with it. CPU and memory are not stressed (but the projects are very light for the moment) even with 4 SIR running. good !If it's like SX in that regard your'e probably going to need to give each file a start point idential to the start point of the earliest file... IOW, arm each track that starts later than the earliest one starts & record just a second or so of blank

audio - you can do this all at once, of course; just arm all the tracks that this pertains to & hit record for a second or two. Make sure you zoom all the way in to the earliest track as a reference & set your start point same as the start of that trackfile. Then, you can deselect/bypass all the plugin's & EQ's (you don't have to do this one at a time, you can do it in the Inspector window off to the left), and then click & drag across a given track's audio files so that they're all selected/highlighted & then right-click on it, then go to "audio", then "bounce selection" - it'll turn all the segments into one file called "bounce lead vocal" or whatever you named the channel, it'll just have the word "bounce" in front of the filename. You can also select several channels' worth of audio segments at once & it'll just do them sequentially - just make sure they're adjacent channels, or if they're not adjacent to each other, use either "shift" or CTRL (I forget which) while selecting, and that way you can skip over channels that may not need to be rendered like this. It'll fill in any gaps with blank space & give you one continuous file per track.

Then when you're importing the files, just look in the audio folder for the files named "Bounce Lead Vocal", Bounce Guitar1", etc, plus the ones that you didn't have to render (the ones that started at the actual "start point" of the song.

Keep in mind this is SX I'm referring to, there might be some slight differences in Nuendo, but from what I keep hearing they're so similar you could probably just check these steps before you proceed just to make sure, then go for it.

Probably the simplest way would be to select all of the events on that track, glue them together (glue tool) into a single part, drag the start of that part to 00:00 if necessary (just be sure the selection tool isn't on time compress/expand or move contents). Select the part, and right click to Audio - Bounce Selection. This will create a new audio event in the pool, without plugins.

two things.

1) What are corporations composed of? People.

If people choose to voluntarily run under the limits of 89, people are free to spend up a limit. The thing that makes this legal is that it is completely VOLUNTARY. Even if 89 passes, you as an individual are under it's rules only if you choose to be. If you choose to run as everyone does now, nothing stops you from spending the farm on whatever you want.

And everyone is welcome to make PACs, even as they do now, to finance certain things of interest.

If corporations are limited, but the people who compose them are able to spend however they want, I don't see how your free speech is limited. I know all about the "corporations are people" thing. Nonetheless, people are also people, and they can do as they wish, even under 89.

Ok. So oil and tobacco companies are attacked by propositions. The people in those companies can respond and support whatever they want, like you and I can. No limit.

As an aside, right now the deck is stacked so badly in favor of corporations (they are immortal, they have rights of people without many of the responsibilities, they are legally obligated to do anything necessary to make a buck) that 89 just gives back a little of the leverage to real people that has been usurped by corporations over the years.

2) The higher taxes, slight though they may be, are of course a concern. But election costs (mostly media buys) and benefits to corporate donors (currently over \$200 per person in CA) are presently coming from the public, in higher costs in everything, passed along to the consumer.

What is better? Paying corporations who then buy the government, (in return for, in some cases, huge benefits) or just paying the officials ourselves?

Thanks for taking the time to consider these things.

-steve Thanks for inferring that I and "youthful" have anything in common.

It is appreciated. Nostalgic, even.

John,

If you think I believe the Dems have a perfect plan and will make everything
swell, you are sadly mistaken. I believe the Democrats will have their share
of crooks and liars, including plenty of pocket lining old school fat cats.

Even so they will be FAR better.

and most dangerous administration in the modern era and they have to go.
I only hope my vote will actually be counted.

Gene Actually I may be spending Election Day hiding indoors.

<http://apnews.myway.com/article/20061105/D8L74U4O0.html>I've recently picked up a couple
Nvidia NVS 280 video cards. I'm not seeing
my second monitor when I run the cards with the DVI splitter cable and DVI

into both monitors. The second monitor never detects any signal, even at boot up. Interestingly, if I put a DVI to VGA adapter on the second DVI out connector and run the signal into the monitor as analog I CAN see the second monitor.

Everything else works. Dual mode in analog (VGA) has no problems. I've checked the monitors, the cables, etc., all the parts work. I loaded the latest drivers from Nvidia, no change. I have two of the DVI splitter cables and they both give the same result. I have two of the NVS 280 cards and they both work the same too.

I've found one post via Google where someone was discussing this problem and found the special DVI splitter cable was the issue. I have Molex splitters, both VGA and DVI. He had a PNY version of the card and found that he needed a PNY splitter. My cards just say Nvidia, though I know that they're sold through PNY, HP, Compact, and others.

Thoughts?

Thanks,

My MacBook Pro will be here tomorrow.

I'm loading XP under Parallels on it as soon as it's up and running and all updated on the Tiger side.

Why?

Because I have apps that are Windoze-only that I need to run, even when I'm away from the house.

I look at it as a replacement for my Powerbook G3 Pismo and my ThinkPad all in one shiny box.

In the studio/office, I have both an Athlon/XP box and a dual G4/Tiger box. I have reasons for both.

I couldn't travel with my Powerbook, because DeLorme's gps software/hardware combo won't run on PPC Macs. That's the killer app that kept me lugging my Thinkpad on trips. That, plus a few other

apps.

Now, I can run the gps stuff under XP on a virtual machine, and then run OSX for almost everything else. And when I'm at a race with the team I'm webmaster for, I can run my copy of Adobe GoLive CS2, which I only have in Windoze flavor, and do updates while I'm there.

It's a best of both worlds thing, not "XP running on a Bentley". It's more like having a Bentley with two different engines that you can choose with a little pushbutton, dependin on what you need at the time.

pabYou know John, I hear you! Maybe you should run for office?

The problem I see is this: people are for the most part pretty stupid. Shocking, I know. Who in this country would actually read a detailed plan of action? I think if there were enough people who demand that (over say probably the meager 15% who care) that might happen. But that doesn't sound like the US to me...

Who actually cares about anything if nothing really touches their daily lives? At what point does your average citizen stand up and go to the streets? I'm really amazed at our populace's (and my own) ability to sit comfortably watching TV. But if you don't have a draft touching you, or if you don't think your privacy counts for anything, then no one really cares. Sad, really. But I feel like my own voice is pretty drowned out by complacency...

I also hope my vote is counted, even if I can't stand most of the people I'm voting for. Would our election process stand up to world scrutiny? No. There has to be a better way.

Oh, and while I'm on a rant, I can't stand that horrible John Mellencamp "song" Chevrolet is hawking on TV. Oh, right, rural white dudes own the country. We've come so far!

So, how many of us here are still using Paris?

Peace,

Graham (who is probably stupid too)

Yes, but it is not the individuals that are under attack by some of these
initiatives, it is the company, at least directly. The company ought to
be able to respond without having to overcome a legislated disadvantage.

Yes, there are downsides to this. Even conservatives who really do believe
in right and wrong most of the time, had a huge slap in the face with Randy
Cunningham didn't they? Money buys power. You have a real point in what
you say. I am just not sure this prop will fix the problem.

you need to research 89 just a little bit more. The whole concept is to make it possible for folks -- like us, perhaps -- to run competitively against millionaires. Really.

You get an amount of money. If your opponent outspends you, you get a matching amount until your amount is doubled. If he outspends you again, you get another matching amount. This goes on for several rounds, depending on what office you're running for.

It's not enough to match a millionaire, necessarily. But it is enough to make a competitive race in something like 98% of races, historically.

The beauty of this system is that it prevents millionaires or others from thinking they can walk off with the race by burying you in money. The historic effect where it has been put in place has been to actually decrease the amount of money spent, and increase the amount of actual debating and talking issues.

I still don't get it. The corporation is not a "real" entity. It doesn't suffer pain or embarrassment, or hunger or pride. It cannot be "attacked" as if it were a city state. It is a legal construct. The parts of it which CAN be attacked are the HUMANS, and they can respond as any other humans do.

Why should a corporation be able to do anything other than what it's constituent people can do? I don't get it. I think this whole concept of corporations being "things" other than legal constructs is key to many of our problems.

Suppose you made a great big mask. Suppose you said that this mask was what you were going to use to do business. People would see this mask and know they were going to get good products or service. People would give money to the mask, but of course the money would go to you, and you would take that money and pay yourself and pay for your goods and services.

If you spend money promoting something in the name of the mask, the mask it not doing it. You are! the mask does nothing on its own. It is a symbol. An idea. Nothing more.

Suppose someone attacked the reputation of your mask. Would the mask need powers to defend itself? Of course not! It's just a mask! It can do nothing without people. The idea of a corporation needing some way to "defend itself" sounds ludicrous to me.

Proposition 89 empowers people, at the expense of corporations. I see that as only a small redress of the huge imbalance that exists now.

I do know that what we have right now is NOT working, and waiting for something

perfect to come along is not going to produce any positive change in our lifetimes.

And, again, thanks for engaging in this discussion.

-steveWell, you're free to vote or not, and sit around waiting for perfection to come knocking. Hope that works out OK for you. At least you won't be voting for someone you think is incompetent.

I'm with Sarah, definitely not sitting this one out. And since I see no reason to trust hackable voting machines, I'm voting absentee on a paper ballot.

Cheers,
-Jamie

the Creamware mixer/summing bus instead of the Cubase summing bus.

There's something different going on. I'm not going to make any definitive statements about it sounding better, but there's something happening here that sounds different from what is happening when sending the mix out of Cubase SX through the RME Totalmix. Maybe my imagination, maybe not.

Also, I'm playing back a 40 track project with this system at 3ms latency. The SX CPU meter is at around 40% but it is not spiking and causing dropouts. The RME cards were much less stable. I would have had to be at 12 ms to achieve this kind of stability with the RME hardware. I've been working in SX for over 5 hours now without one single crash or hiccup. That was unheard of with the RME cards. There was always some sort of issue with them. It was worth the move to Pulsar just for the stability factor.....and I really didn't expect that.

The more I use this system, the better I like it.

>do.

This is where I really disagree. It most certainly is real in every way that matters, It issues real checks, it pays real taxes, it has a real reputation that, once damaged is terribly hard to repair, and it most certainly can be attacked. It has interests that both include and go beyond the individual interests of

employees and stockholders, and should be able to defend those interests so it can continue to employ people, produce products, and pay taxes.

When a corporation is attacked by ill-conceived activist initiatives, it has great power to respond, and it has greater liabilities as well (more to lose) than the interests of its individual employees.

Now, when a corporation is attacked by enlightened and wise initiatives, it also has more power to respond than an individual, for the same reasons, so may abuse the system to lie.

But, I believe that liars get caught, most of the time, and eventually. In the case of corporations, the consequences of getting caught are very large indeed, and can close the company when a public opinion backlash happens.

I would prefer to keep companies able to respond to initiatives as they see fit, and believe the press and the supporters of initiatives will catch them when they lie, and the public will respond appropriately.

>Proposition 89 empowers people, at the expense of corporations. I see that >as only a small redress of the huge imbalance that exists now.

It prevents not one single instance of the corruption of politicians, nor does it prevent corporations from lying about initiatives. What it does do is prevent corporations from defending their interests to the full extent.

Right now, IMO there are two very ill-conceived initiatives on the ballot attacking specific industries.

Prop 86 adds 13 cents to the current 2.60 per pack cigarette tax to prop up the terribly neglected hospital ER system as well as for nurse education, and some health insurance. Now most smokers don't end up in ER for smoking;

they just walk in and die in the regular wards, so I don't see the connection. If we are going to play "let's get the bastards" with a truly scummy industry like tobacco, with punitive legislation, not related to their product, a product that is legal and everyone knows the results of using, then where does it

stop? What's next? I like big, evil, steaming burritos from Alberto's (here in SoCal). I'm sure they are very bad for me. Hey why not hammer the death-burrito industry to pay for school textbooks? It's for the kids!

ER's should be funded by those who use them (that means Mexico contributes) and/or the state in order to have a humane system. Not by arbitrary taxes on companies we do not like.

Then we have prop 87.

It is a spectacularly bad piece of work... It will:

Establish a \$4 billion program with goal to reduce petroleum consumption by 25%, with research and production incentives for alternative energy, alternative energy vehicles, energy efficient technologies, and for education and training.

One problem. It completely neglects the acquisition of new oil sources in the short term! This is the most important geopolitical issue of our time. As we speak, 6 more middle eastern countries are signing on to develop nukes... And there is one source for the money/power to do so.

Oil.

In fact, this stupid initiative actually makes it *harder* to develop our own resources. see below

Funded by tax of 1.5% to 6% (depending on oil price per barrel) on producers of oil extracted in California.

Oh, and who would prefer to tax only our OWN oil? Could it be maybe satan? It could be the selfish yuppie slime who will do anything to prevent oil derricks from appearing on their million-dollar views too, huh?

The failure to develop first, our own oil resources, and then alternatives, could actually spell the end of the west. It's that serious. A major project should have been started at the federal level, 20 years ago, and instead we get garbage

like prop 87. Oh, and it pays for "education" too. To remind us to be green! To remind us to conserve! Bullsh*t. We need real exploration, we need new refineries, we need a hydrogen program started, and instead we get feel-good crap that will make the situation worse.

In the case of both these initiatives, the interests of Chevron, and yes (gulp) big tobacco, coincide with those of the public. They have both told the truth in their ads against these initiatives.

I say, let corporations represent themselves in the free market and let activists and the press make their case without interference and restrictions.

And yes. Everyone vote please!

DCWhile walking down the street one day a US senator is tragically hit by a truck and dies. His soul arrives in heaven and is met by St. Peter at the entrance.

"Welcome to heaven," says St. Peter. "Before you settle in, it seems there is a problem. We seldom see a high official around these parts, you see, so we're not sure what to do with you."

"No problem, just let me in," says the man.

"Well, I'd like to, but I have orders from higher up. What we'll do is have you spend one day in hell and one in heaven. Then you can choose where to spend eternity."

"Really, I've made up my mind. I want to be in heaven," says the senator.

"I'm sorry, but we have our rules."

And with that, St. Peter escorts him to the elevator and he goes down, down, down to hell. The doors open and he finds himself in the middle of a green golf course. In the distance is a clubhouse and standing in front of it are all his friends and other politicians who had worked with him.

Everyone is very happy and in evening dress. They run to greet him, shake his hand, and reminisce about the good times they had while getting rich at the expense of the people.

They play a friendly game of golf and then dine on lobster, caviar and champagne.

Also present is the devil, who really is a very friendly guy who has

a good time dancing and telling jokes. They are having such a good time that before he realizes it, it is time to go. Everyone gives him a hearty farewell and waves while the elevator rises...

The elevator goes up, up, up and the door reopens on heaven where St Peter is waiting for him.
"Now it's time to visit heaven."

So, 24 hours pass with the senator joining a group of contented souls moving from cloud to cloud, playing the harp and singing. They have a good time and, before he realizes it, the 24 hours have gone by and St. Peter returns.

"Well, then, you've spent a day in hell and another in heaven. Now choose your eternity."

The senator reflects for a minute, then he answers: "Well, I would never have said it before, I mean heaven has been delightful, but I think I would be better off in hell."

So St. Peter escorts him to the elevator and he goes down, down, down to hell.

Now the doors of the elevator open and he's in the middle of a barren land covered with waste and garbage. He sees all his friends, dressed in rags, picking up the trash and putting it in black bags as more trash falls from above.

The devil comes over to him and puts his arm around his shoulder. "I don't understand," stammers the senator. "Yesterday I was here and there was a golf course and clubhouse, and we ate lobster and caviar, drank champagne, and danced and had a great time. Now there's just a wasteland full of garbage and my friends look miserable. What happened?"

The devil looks at him, smiles and says, "Yesterday we were campaigning..... Today you voted.".....and also, I've got it chasing the Paris transport, just like the RME cards so it syncs perfectly to Paris ADAT.

;o)

>I dunno. It may. This Creamware system may be an acceptable alternative to
the Paris mix bus. No kiddin'. It's actually got some headroom. I've been
asking the Pulsar guru's about this. Seems the same DSP that the Scope
system uses is also used in the Euphonics digital console and the Fairlight
system. I haven't verified it, but I'
m playing back that same 37 track project that I was working with in Cubase
a couple of weeks ago and it sounds big and open when routed via ASIO from
Cubase to the Scope mixer.

Also, looks like the PCI slot in the mobo survived, but the host card for
the Magma didn't.

>Ok, we have Prop 90 on the ballot here in California.

It is an anti eminent domain initiative.

Here's what's reallt weird.

Check out the "yes on 90" site.

<http://www.yesprop90.com/>

Now check out the "no on 90" site

<http://www.noprop90.com/>

Same models. Same pictures, same graphics, same layout.

Very strange. Steve, have you seen this? Anybody else have an idea?

Strange...

DCDj..Keep us posted. You have peeked my interest in this platform. I do know that both Euphonics and Fairlight uses the sharc dsp chips or eventhe newer dolphon chips which are great dsps.. Personally, I love dsp systems.

I know people are all jacked for native systems, but without the proper dsp, they've all lacked something..AND, It keeps you on the PC /Mac upgrade path forever.. Which is dumb!! When you add ut all up , you have already paid for a turn-key DSP system.

Exactly. And don't forget to put in the 'tune' time the poor souls on native have to go through with every new system generally. I think another things we're going to see more problems with is "automatic updates".. mac and win. No good can come of that for audio guys.

>It integrates wonderfully with Cubase and the routing possibilities are mind boggling. When everything gets here next week my system will have 3 x cards with a total of 20 DSP processors, 56 x ADAT I/O (32 of which are configurable to s/pdif pairs) plus a coaxial s/pdif I/O, an AES I/O and 20 analog I/O.

I just got the first mix happening on it tonight. It integrates just fine with Cubase SX though I'm not sure exactly how many ways it can be configured. Right now I've got 40 tracks in Cubase being processed with whatever UAD-1 plugins and ASIO'ed to the Scope mixer where more plugins can be applied if needed. Since I'm sending mono tracks, I'm having to pan in Scope. I'm going to try to get my head around how to program my Steiny Houston controller to do this or get myself some kind of secondary controller and map it to the Scope environment.

I'm a long way from getting my head totally around the possibilities of this.....but it's very nice, and very stable.

Paris' days may be numbered after all. I'll have to see how I like tracking on this system first. Paris is the best tracking system out there IMHO. I think it's possible to track somehow in Scope with zero latency, just like in Paris. There's something called a VDAT recorder bundled with the system. I guess this could be used and then the tracks flown into Cubase for editing and mixing. I just haven't gone there yet.

;o)

Deej.

I'm inches away from digging in deep to the Scope world too.
I have been watching it for almost one year with no funds
to support my needs. I just bought the parts for a reasonable
duo core and am hoping to implement a 14 chip Scope Pro=20
card asap as my ADAT interface among other things. The Classic
version seems best for my needs with Paris and two active
ADAT cards in XP.

I've also been watching your trials and tribulations as they occur
on both newsgroups. Thanks for all the heads ups! I'll meet you
at the coda.

DC,

I'm spooked and I didn't read one word.

Tom

Whose who?

"DC" <dc@spammersinpolitics.com> wrote in message =
news:454ed31e\$1@linux...

Ok, we have Prop 90 on the ballot here in California.

It is an anti eminent domain initiative.

Here's what's reallt weird.

Check out the "yes on 90" site.

<http://www.yesprop90.com/>

Now check out the "no on 90" site

<http://www.noprop90.com/>

Same models. Same pictures, same graphics, same layout.

Very strange. Steve, have you seen this? Anybody else have an idea?

Strange...

-----=_NextPart_000_01E5_01C7014C.579B8260--I'm playing back this 40 track project in SX with the latency set to 3ms. Cubase's CPU meter is sitting at around 40% but the system doesn't seem to be even breathing hard. I would have had to up the buffers to at least 512k to get a dependable playback with the RME cards.

I'm feeling pretty good about this system so far Tom. It's definitely = got that DSP vibe and the onboard FX are the same level of mojo that I = associate with the UAD-1 cards. The Optimaster bus limiter and the PysQ = equalizer are amazing. the other FX are good too. Unless you're a synth = freak, go for the Mix and Master add-on pack when you buy. It should be = a freebie and is a great bunch of tools.

Neil,

So how did it go?

Hey now, it's not like I get to use this place for free - he cuts me a little break, yeah, but it's a business, you know? And I gotta give him credit, he keeps the place booked.. when I was asking about any weekend times coming up that might be available, it was: "Well, we have this coming weekend, and then nothing 'til February". How many studios can say that? So yeah, he's got a few bucks, but it's not like this studio is just a giant toybox for him, either.

Neil

Deej,
I'm into it for both reasons (effects and synths/sampler) but also as a=20
cost effective way to get 16 ADAT in/out via Paris to/from Cubase. I =
also=20
have a third rig (AMD 3000+) waiting in the wings to take up some native
slack via FX-Teleport for Kontakt if need be.

This is a beautiful time that we are enduring huh?!?
Tom

"DJ" <no@way.jack> wrote in message news:454ee635@linux...
I'm feeling pretty good about this system so far Tom. It's definitely =
got that DSP vibe and the onboard FX are the same level of mojo that I =
associate with the UAD-1 cards. The Optimaster bus limiter and the PysQ =
equalizer are amazing. the other FX are good too. Unless you're a synth =
freak, go for the Mix and Master add-on pack when you buy. It should be =
a freebie and is a great bunch of tools.

;o)

Deej.

I'm inches away from digging in deep to the Scope world too.
I have been watching it for almost one year with no funds
to support my needs. I just bought the parts for a reasonable
duo core and am hoping to implement a 14 chip Scope Pro=20
card asap as my ADAT interface among other things. The Classic
version seems best for my needs with Paris and two active
ADAT cards in XP.

I've also been watching your trials and tribulations as they occur
on both newsgroups. Thanks for all the heads ups! I'll meet you
at the coda.

Tom

"DJ" <no@way.jack> wrote in message news:454eca5e@linux...

No I had not seen those!

I first thought the "yes" site was a parody, but it's links look legit. Perhaps someone took the "yes" site and rebuilt it as a "no" site.

On the other hand, the "yes" site has this, which is pretty darned funny:

<http://www.yesprop90.com/confusing.html>

-steve

On the other other hand, the No site has a quote from, of all places, the Napa Valley Register, never a very stellar paper in my opinion, and I've lived in Napa my entire life.thanks, Don. It's almost too true to be funny.

> Tom, it went pretty well, thanks! I do have a few clips of
some a/b comparisons on the various mics, but before I post
them I want to let this lady hear them & ask her if she
minds if I do so... she was just kind of warming up still when
we did the test takes of a few lines each, but she
was "in-voice" enough to be able to tell which worked best on
her voice.

Piano-wise, we got lucky & nailed it first time as far as
placement goes... no phasing problems or anything like that,
great balance between the lo & hi strings; so that was nice not
having to futz around repositioning things. We used 4 mics on
the piano itself: we stuck a stereo bar on each of 2 mic
stands & used a 414B-ULS & a B.L.U.E. Bluebird (I picked up a
couple of these recently) next to each other on each stereo
bar, and my Earthworks TC-30 Omnis in an ORTF pattern for
room/ambient mics... not too far away - about 5 or 6 feet back
from the end of the piano and slightly off to the left, not
quite 45 degrees, I'd say. ISA-110's on all of them, just
tracked flat with no EQ. Sounds really nice with all 6 channels
just running at equal levels.

I was able to get them to break out one of the C-12's, another
was being used by the guys from this band, who are finishing up
their first CD out there now:

<http://www.myspace.com/thisworldfair>

Anyway, we ended up being able to a/b the Stephen Paul-modded

U-67, my Mojave MA-200 (which DID sound a lot like the -67, except with less proximity effect), the C-12, and a Soundelux E251-C that I snagged a great demo deal on just this past week (still a lot of freakin' money though - not sure if I'm \$2,100 worth of "thrilled" on this mic yet).

For consistency's sake, we used Neve 1073's on all of them for the comparison tests, and for the key & style in which she was singing the test takes, the S.P. U-67 was the best (mainly for the warmth factor - the C-12 didn't have enough "body", the Soundelux emphasized the midrange too much, and the MA-200 was actually a close second, but the difference between that one & the S.P. -67 was that the promiximity effect won out in this case). Interestingly enough, however, when we got into the first song itself (they ended up doing two) when she got to some loud parts, it was sounding a little ragged on the high's... not fizzy, just some kind of "something not right", kind of ragged up there so we switched preamps to my Neve Portico & that smoothed it out.

When we got the next song, though, that mic was not working at ALL - different key, different inflections... had her sing a couple of lines again into the 251-C & the C-12; the 251-C was working better on her voice than on the first song, but the C-12 through a 1073 was better still - that nice, silky-just-short-of-zingy high end is what did it for that tune.

Will definitely post some clips of the test files if she doesn't mind.

I'm glad that Pulsar and the investors never gave up on their DSP solution. Even with the pressure of the Pro Native market to just "keep upgrading " your computer folks. This is where Paris could've landed..

The way I see it is this:

- 1) You can do the Pulsar/Paris combo and keep everything (In the Box)..
- 2) Paris-SX/Logic/DP, Pro Tools..and a Mixer (Analog or Digital).

Both with improve the summing of any DAW by leaps and bounds..

Neil,
Good stuff! I'll be waiting.
Tom

"Neil" <OIUOIU@OIU.com> wrote in message news:454f4526\$1@linux...

Tom, it went pretty well, thanks! I do have a few clips of some a/b comparisons on the various mics, but before I post them I want to let this lady hear them & ask her if she minds if I do so... she was just kind of warming up still when we did the test takes of a few lines each, but she was "in-voice" enough to be able to tell which worked best on her voice.

Piano-wise, we got lucky & nailed it first time as far as placement goes... no phasing problems or anything like that, great balance between the lo & hi strings; so that was nice not having to futz around repositioning things. We used 4 mics on the piano itself: we stuck a stereo bar on each of 2 mic stands & used a 414B-ULS & a B.L.U.E. Bluebird (I picked up a couple of these recently) next to each other on each stereo bar, and my Earthworks TC-30 Omnis in an ORTF pattern for room/ambient mics... not too far away - about 5 or 6 feet back from the end of the piano and slightly off to the left, not quite 45 degrees, I'd say. ISA-110's on all of them, just tracked flat with no EQ. Sounds really nice with all 6 channels just running at equal levels.

I was able to get them to break out one of the C-12's, another was being used by the guys from this band, who are finishing up their first CD out there now:

<http://www.myspace.com/thisworldfair>

Anyway, we ended up being able to a/b the Stephen Paul-modded U-67, my Mojave MA-200 (which DID sound a lot like the -67, except with less proximity effect), the C-12, and a Soundelux E251-C that I snagged a great demo deal on just this past week (still a lot of freakin' money though - not sure if I'm \$2,100 worth of "thrilled" on this mic yet).

For consistency's sake, we used Neve 1073's on all of them for the comparison tests, and for the key & style in which she was singing the test takes, the S.P. U-67 was the best (mainly for the warmth factor - the C-12 didn't have enough "body", the Soundelux emphasized the midrange too much, and the MA-200 was actually a close second, but the difference between that one & the S.P. -67 was that the promiximity effect won out in this case). Interestingly enough, however, when we got into the first song itself (they ended up doing two) when she got to some loud parts, it was sounding a little ragged on the high's... not fizzy, just some kind of "something not right", kind of ragged up there so we switched preamps to my Neve Portico & that smoothed it out.=20

When we got the next song, though, that mic was not working at ALL - different key, different inflections... had her sing a couple of lines again into the 251-C & the C-12; the 251-C was working better on her voice than on the first song, but the C-12 through a 1073 was better still - that nice, silky-just-short-of-zingy high end is what did it for that tune.

Will definitely post some clips of the test files if she doesn't mind.

href=3D"news:454f4526\$1@linux">news:454f4526\$1@linux...</DIV>
Tom,=
 it=20
 went pretty well, thanks! I do have a few clips of
some a/b =
 comparisons on=20
 the various mics, but before I post
them I want to let this lady =
 hear them=20
 & ask her if she
minds if I do so... she was just kind of =
 warming up=20
 still when
we did the test takes of a few lines each, but =
 she
was=20
 "in-voice" enough to be able to tell which worked best on
her=20
 voice.

Piano-wise, we got lucky & nailed it first time as =
 far=20
 as
placement goes... no phasing problems or anything like =
 that,
great=20
 balance between the lo & hi strings; so that was nice =
 not
having to=20
 futz around repositioning things. We used 4 mics on
the piano =
 itself: we=20
 stuck a stereo bar on each of 2 mic
stands & used a 414B-ULS =
 & a=20
 B.L.U.E. Bluebird (I picked up a
couple of these recently) next to =
 each=20
 other on each stereo
bar, and my Earthworks TC-30 Omnis in an ORTF =
 pattern=20
 for
room/ambient mics... not too far away - about 5 or 6 feet =
 back
from=20
 the end of the piano and slightly off to the left, not
quite 45 =
 degrees,=20
 I'd say. ISA-110's on all of them, just
tracked flat with no EQ. =
 Sounds=20
 really nice with all 6 channels
just running at equal =
 levels.

I was=20
 able to get them to break out one of the C-12's, another
was being =
 used by=20
 the guys from this band, who are finishing up
their first CD out =

there=20
now:

<A=20
=
href=3D"http://www.myspace.com/thisworldfair">http://www.myspace.com/this=
worldfair

Anyway,=20
we ended up being able to a/b the Stephen Paul-modded
U-67, my =
Mojave=20
MA-200 (which DID sound a lot like the -67,
except with less =
proximity=20
effect), the C-12, and a Soundelux
E251-C that I snagged a great =
demo deal=20
on just this past week
(still a lot of freakin' money though - not =
sure if=20
I'm \$2,100
worth of "thrilled" on this mic yet).

For =
consistency's=20
sake, we used Neve 1073's on all of them for
the comparison tests, =
and for=20
the key & style in which she was
singing the test takes, the =
S.P. U-67=20
was the best (mainly for
the warmth factor - the C-12 didn't have =
enough=20
"body", the
Soundelux emphasized the midrange too much, and the =
MA-200=20
was
actually a close second, but the difference between that one=20
&
the S.P. -67 was that the promiximity effect won out in=20
this
case). Interestingly enough, however, when we got into =
the
first=20
song itself (they ended up doing two) when she got to
some loud =
parts, it=20
was sounding a little ragged on the
high's... not fizzy, just some =
kind of=20
"something not right",
kind of ragged up there so we switched =
preamps to my=20
Neve
Portico & that smoothed it out.

When we got the =
next song,=20
though, that mic was not working at
ALL - different key, different=20
inflections... had her sing a
couple of lines again into the 251-C =
&=20
the C-12; the 251-C was
working better on her voice than on the =
first song,=20
but the
C-12 through a 1073 was better still - that nice,=20
silky-just-
short-of-zingy high end is what did it for that=20
tune.

Will definitely post some clips of the test files if=20
she
doesn't mind.

-----=_NextPart_000_0107_01C70199.387BA5C0--Hi DJ,
Awesome to hear the you got positive results. How many Pulsar cards did
you install? Was it just the one you got for now?
Hopefully it will all work out so that you can finally give up the ghost
of Paris. Maybe you even be able to have time to do enough sessions to
start paying for all this...)

Chris

Chris Ludwig

ADK Pro Audio

(859) 635-5762

www.adkproaudio.com

chrisl@adkproaudio.comheheheh!!!...I can only do this if I decide to sell Paris because if I decide to keep using Paris, I will need the 24 ADAT I/O on the ADAT plate for mixing.

It's like making the decision to trade for the Plus plate is pretty much like making the decision to move totally away from Paris.

It's a tempting thought but it's a move I'm not ready to make yet. Maybe in a month. I'm going to have to try to run a heavy tracking session with the Scope system and then do a mix with it. I'll have 22 I/O with Scope (A16U, Mytek converters into Pulsar II AES and 4 x AD/DA's on Pulsar II and Pulsar Home cards). That's plenty for any situation around here. If I like it and it's easy, then I'm likely to be switching platforms for good.

The one thing that bothers me though is that using Scope, I'm still using two different mixers.....the Cubase mixer and the Scope mixer. I like the editing power of Cubase. I need to figure out a way to integrate these two so that I can use a mixer surface with both of them. Maybe a Mackie controller would do this?

;o)

> chrisl@adkproaudio.com Right now I've got 2 x Pulsar II cards and a Pulsar Home card with the A16U

AD/DA converter on the way. I ordered these particular cards thinking that I'd basically recreate my RME > Paris routing scenario.

I purchased the hardware at various places. The last purchase I made was from a guy named "garyb" on the PlanetZ forum.

<http://www.infinitevortex.com/>

One reason I purchased from him is that he has been so incredibly helpful. taking tech support calls on Sunday even. He's sorta' recognized as the unofficial American tech support rep. He was recommended to me by Ali Fawaz who is the North American rep for Creamware.

I have been very pleased with the responsiveness and patience of this whole community.

The Pulsar forum is a great place to start learning to grok this system.

I'm running mine in an ASUS A8V-Deluxe mobo with an AMD 64 4400 x 2 CPU with no problems at all, but it's one of the *least* recommended mobos out there. It does, however, play nice with 4 x UAD-1 cards and I'm having no problems with it. If I was starting from scratch, I'd go with Intel.

They all look identical, so I assume that they were all made by Magma.
Is there a functional difference between these things?

Thanks! I was just joking man, you probably knowed....

just thought I'd mention it because that's my favorite album

>Hmmmmmm, I have an Asus AMD board right now but I suppose I could switch pretty
easily. But I'm not sure if I'd go for a new computer and a \$1500 DSP card
in one swoop.

Also, you realize that if both of us use this stiff Creamware will not
last the year as a viable commercial entity. They're toast. I've loved so
much audio gear that shrieved in the vine or blew up in my face that companies
should pay big bucks for me to use competing product.

Then again, maybe now that I'm a civilian and not an audio writer that's
all over and I'm no longer rat poison to things like the OASYS PCI card .

..

They are counted with a scanning machine in the county where I vote,
which has its own problems, but is probably less hackable than a touch
screen machine and has the advantage of the original paper ballot for
manual recounting as needed.

The Avid are the same as the Magma. The SBS was not the same as the Magma, they are a completely different company. Deej had some problems with his SBS, maybe he can chime in.

JamesIs this setup something mere mortals can configure?? Sounds like you had no issues. How do you like SX - I have people I have worked with that use it also and say that it's been stable. Thank you for all the information - you have really put in a lot of hard work that will make it much easier for the rest of us!

The reason I ask is that I just tried to upload a song I wrote last night and it's claiming it's a copyrighted peice, and yet I know I wrote it, and would be quite astounded if anybody else had written the same peice.

Yes it borrows some ideas from Radiohead timing wise, but the timing is definably different from the Radiohead song from which it was inspired, and the chord progression, melody etc are totally different. I don't see especially how any electronicly based monitoring system would pick a minor thing like that up...?

I'm thinking they're still tweaking the system...

Cheers,

Those things are weird. I once had a pizza delivery guy tell me that he grew up in the house that I live in now. It would have been an enlightening experience if the guy wasn't a freakin' fruitcake. I still think that there may be bodies buried in the concrete floor of the basement. :)

-scott v.Hi Morgan,

I appreciate your complement, however in this situation "hero" may not be as appropriate a term as "stubborn".

But thanks!

Thad,
I'm building an AMD box for this also using the ASUS A8R-MVP/ X2 4800 by =
Chris Ludwig's
recommendation. I hope it does well with a Scope Pro card for me. I =
won't
buy the Scope card until I have Cubase running flawlessly. But maybe I =
will. . .
I'll be asking questions for sure.

After buying the parts I realized I should of had Chris build it for me. =
It wouldn't
have been much more and surely would run better. =20

I'm a dumb ass,
Tom
"TCB" <nobody@ishere.com> wrote in message news:454fa450\$1@linux...

Hmmmmmm, I have an Asus AMD board right now but I suppose I could =
switch pretty
easily. But I'm not sure if I'd go for a new computer _and_ a \$1500 =
DSP card
in one swoop.=20

Also, you realize that if _both_ of us use this stiff Creamware will =
not
last the year as a viable commercial entity. They're toast. I've loved =
so
much audio gear that shriveled in the vine or blew up in my face that =
companies
should pay big bucks for me to use competing product.=20

Then again, maybe now that I'm a civilian and not an audio writer =
that's
all over and I'm no longer rat poison to things like the OASYS PCI =
card .

OK, you're killing me here. Is there anywhere online that has a =

same method as all the previous MP3's that I have successfully uploaded. Indeed I later uploaded a tune using the same method... so it seems unlikely, though worth checking for sure.

Cheers,
Kim.Ok Kim, you bring up an important subject,
We should all be myspace buds,,,
let's list and join..
There is power in #'s eh?

my band;

---=_linux454fdbao--Thanks,

Damn, I was hoping for a higher rez picture... I am trying to identify the console a little more accurately. I know someone here that is REALLY familiar with Helios desks.

David.

>>I'm playing back a project that I'm so familiar with that it almost sickens me to listen to itthat's how many times I've heard it. I can tell you every sonic nuance in this song ad nauseum for the entire (almost) 4 minutes that it plays.

I've got a totally dry mix of it up in Cubase right now.

I have created 30 stereo ASIO busses in the Creamware control panel and I'm bussing twenty mono tracks to 20 of these stereo busses (the others will be reserved for other things later).

When playing this project back, I'm getting something that is close enough to what I hear with Paris that I think it's going to satisfy me. Not sure yet. The Paris soundstage may be a little broader, but the jury is still out on this because I don't have any ambience or delays and ambience and delays were all over the original mix. Since this mix in it's *dry* state is giving me something that I find to be sonically similar to what I got in Paris, that's a promising situation.

I think the pan law in SX may be different than Paris, but I keep hearing on the Pulsar NG that I should be mixing in the Pulsar mixer rather than the

Cubase mixer so I think the pan law in the Creamware mixer may be a bit different still. That's a bit of a different animal and I haven't tried it yet, but as a summing bus, it's giving me a little headroom and the center of the mix is not collapsing or sounding harsh and muddy. Hi DJ, I'm pretty sure you might have either had something wrong with one of the RMEs. I've far more elaborate clock setup and multi-card setups than what you last had with no performance issues. I wonder if card could have been damaged with some of those motherboard problems you had in the past.

If your experiences go well with the cream ware I might look into us carrying them again. Had too many bad issues in the past but looks like possibly they might working things out.

Chris

Is anyone here using this unit?
I think this would fit the bill for a handy, tweekable, pro quality pre for
under \$800.00

Any opinions, recommendations?didn't care for it.

Thanks David!<http://www.planetz.com/forums/viewtopic.php?t=20538>

C'mon folks, we all like the stories and all but this isn't a cry for help I don't know what is. Does anyone live near enough to get him help in person or does one of us have to fly to Colorado? I think with my politics I'll wind up at Gitmo after touching down in Denver, but maybe that's the only option . . .Hehehe!!!!!!.....c'mon out to Colorado Thad.

;o)

>Imagine being able to have the functionality of Cubase SX, being able to
track with FX with zero latency, being able to bus anything anywhere and to
insert anything anywhere, have a motorized control surface, being able to
use UAD-1 cards and external hardware with latency compensation and to be
able to accomplish this all on one computer at 24 bit with no truncation,
clocking hassles, no wondering if the boot sequence will work *this
time*.....no needing to use Windows ME because you need 8 x ADAT modules
to *talk to* the outside world and a mix bus that sounds as big as Paris .
I'm not sure I'm there yet and I want to see how Chuck's project comes out
before I decide to sell my stuff, but believe it or not, I'm actually tired
of workarounds. I'll hang in there for the sound if I can't achieve it
another way but I may have found something here I can live with and then
some. I'm getting *big* out of this thing and I've just scratched the
surface. Yeah, I know how to work around just about anything these days but
I'm a man on a mission. It's no longer much fun to see what I can get away

with. Been there, done that.

>Chris,

The cards all work perfectly on their own. They were also stable when receiving clock individually from cables of equal length. Less so when slaved to ADAT or WC and then daisy chained. My routing scenario became so

convoluted here that clocking 3 x units (daisy chained or not) with cables of varying lengths could have been the last nail. I think it was more the clocking. There were a lot of cables of different lengths and other variables that are definitely "no-no's" The single cable scenario seems to have worked with the Pulsar. It also worked if I had just a single RME card being clocked from Paris.....and would have probably worked OK with a MADI.

;o)

Well, he must be awfully busy selling Pulsar cards, then;
because I sent him an e-mail inquiry this morning - mere
moments after you psoted this, in fact - as to what components
it would take to achieve what I want & what the price would
be, and I haven't heard fuck-all back from him yet.

Aaron,

I'm no expert but I would think following the Creamware path regarding = processors and chipsets may also prove stable for Paris.

This is what Gary (Creamware expert/user/salesman) suggested to me for = Creamware use:

"as to the computer, i would personally use an intel conroe processor = with an intel d965ryck motherboard or a p4 with an intel d865perl. i = know both setups are rock solid, cheap and offer excellent performance."

I got an AMD dual core by Chris L.'s suggestion. This was to keep the = cost down and the ability to run ridiculous amounts of Kontakt voices while sharing the PCI bus with a = Creamware 14 chip card. I guess the ATI chipset is no bargain for the PCI bus and the Lan throughput = compared to the Conroe/Intel above.

I haven't looked all that closely at it but you should if you have the = time and money.

Inexpensively yours,
Tom

(859) 635-5762I had a 7 slot SBS. Any 7 slot chassis is going to have fewer PCI bus options than a 13 slot chassis. It's all about keeping certain cards off certain IRQ's. The more options you have, the better.

OK, he got back to me now... kewl - I had a few more questions

for him, based on his replies, then perhaps it's "follow the Pulsar-bricked road" for me too!

NeilSir Deej...

1.) You said you got the "Home" card, yes? Does that card come with A/D & D/A convertors or did you have to buy them separately?

2.) If it doesn't come with convertors, what do the i/o's consist of? Just a bunch of lightpipe sockets? SPDIF?

3.) Can you sum though it, run a couple of 'verbs, and a dozen or so instances of let's say compressors & the like at the same time?

I am planning to use this pretty much only for a set of UAD-1 cards. I thought that multiple UAD-1 cards took care of IRQ assignments themselves. But that may be naive. :)I don't see where your herein-written plan to not vote is going to lead to the things you say you want written.

Maybe it's just my twisted perception, but I think that in more than one way, you just voted for exactly what you don't want.

W.

- Toft EC-1 single channel preamp
- JoeMeek OneQ single channel preamp
- JoeMeek sixQ single channel preamp

Opinions are quite varied over at Gearsutz but these seem to stand out in the 'bellow 1000 price range'.
I know the new Meek stuff is not the same but I wonder if it still good?

Cheers

Rob the future Pulsar/Paris geek #2....!!! Wonder who's #1.....!!

>Technology sucks!

I just voted, well I think I voted??? The scantron style voting machine stopped working at 1:30. We had to stuff our ballots in a slot on the side of the machine. The women that were working there didn't really know what to do. A women was on a cell phone trying to get help, and the person on the other side on the line kept telling her to keep trying to put ballots in the machine. The machine was spitting them out and saying that it was a possible folded ballot and to try again. They tried about 30 ballots, and all they would get was errors. It was odd that the machine stopped right at 1:30. There has to be a better way.I think that if you didn't vote - then you just need to shut your mouth. :)

does vote won't
respect your opinion - and you really shouldn't argue about how bad or good
things go - if you don't concern yourself to participate, then don't bitch.
C'mon John... you gotta do better than that. At *least* I did what I'm able
to do today.

Now, I should say, that I agree with you, in that these are times that lack
leadership with true inspiration and vision. And, if you are planning or
going to run for elected office - then I owe you much kudos - BUT, if you're
just doing *nothing* but bitching.... then.... boo. You'll lose no matter
what.

The polls are still open - you still have time man... !!! Do it!!! C'mon man! :)

peace,
-Carl

I built a new machine recently. Intel D975XBX board. I was going to use it for video editing .If the quad cores are priced within reach i will drop one in and use it for audio as well. It has a D940 in it at the moment.

With the limited testing done so far I can say it smokes my dual opteron system.It has all the SSE instruction sets. Some programs wont run without them.Its a no brainer IMHO.

1066FSB,use either ECC or non ECC DDR2,4- sata 2(3G/sec),4 sata 1(1,5g/sec)
1-eide, 2 floppy 8-usb 2. the only negative on this board is there are only
2 pci slots.You can run it in raid but why bother with 3 gigs a sec?
Hopefully magma will get the PCI express controller working right .
I think it is a great board , for this month anyway.
I dont have a clue about paris running on it .didnt try it , dont need it.
> Paris compatible, of course :)
> Anyone having great success with a Dual Core Intel chipset rig?
>
> AA
>James-

I hope someone there had the presence of mind to video tape the episode,
or at least get lots of still pictures, for verificaton.

>Any opinion about Behringer V-Verb Pro 9024 and Virtualizer DSP 2024p?Apart
this, V-Verb Pro not for official sale in EU, only private auction on Ebay.Ok, John. Here's the
problem.

I kinda agree with you on some level. If I'm given a choice of two idiots,
and told that if I don't vote for one of them, then I am somehow a civic

failure, well, that doesn't cut it.

The problem is that you're not helping. It's like someone gives you a menu of two foods you don't like, so you refuse to eat at all. The folks happily eating crap aren't phased at all. The only person who gets starved is you. Ha ha. Boy, you sure showed them!

What's needed? Real food! If there's none out there to choose, grow some of your own! Cook it yourself!

Get my analogy? The whole "If you don't vote you can't complain" is as lame as saying, "If you don't wear a bullet-proof vest every waking hour and then get shot and injured, you can't complain."

You shouldn't have to wear a bullet proof suit! you shouldn't have to vote for idiots!

But the solution requires a lot, a WHOLE lot, more than just emerging from your political groundhog hole every two years to see if it's raining idiots or not.

If no one has a plan you can endorse, find likeminded people and come up with one yourself! Then find someone who will follow it! if you can't find someone, well, how about doing it yourself!

So, what causes have inspired you to take political action? None?

Here's the answer to those who say if you don't vote you can't complain. You can complain. But if you do NOTHING BUT COMPLAIN, well, then, you can't complain...!

You can, however, drink. It is still a free...to drink...country...

I called my local party and told them to get someone over there to over see how they were handling the situation. With years of good reason, I don't trust the system or the people behind the systems.

>For those interested (I'm sure Chris doesn't need to be, but anyway) tomshardware.com has a recent review of four 975 chipset boards. They're only lukewarm on them in general, finding marginal performance gains for a lot more money, but they're there. Surprisingly they chose the MSI offering as their #1, when DFI and ASUS have been kind of owning the tomshardware world for a while. Maybe MSI is getting their act together a bit. I'll say this, I ran an MSI 440BX machine from being my bending end, overclocked audio box, down to hosting my PARIS rig on a combined native/DSP system, then on to general office duty, and finally as my DSL firewall/router. It never died but when I finally killed

it the power supply fan wasn't working and there was about 1/4 inch of dust all over the thing but it still ran.

If it comes with it's own fire extinguisher, it might be OK...

....unless the fire extinguisher is a Behringer model, too.I'm not complaining. I'm just not finding any reason to vote. I'm a man of reason, not a sheep. If a politician can clearly tell me why I should vote for them I will be glad to listen to them.

I find that politicians think of this as a game and not truly affecting peoples lives. I hate it when people vote for their own special interests. I will never do that. Whenever I vote it will be because the issues are the best for everyone.

I often recommend cutting government programs and people say "But you work for government, your job could be cut" and I say "Good !".

what frosts me are the many times I've voted, knowing that the odds are (and
as reality later shows) that many many things will be much more than 1% worse
afterwards.

-stevell had a behr verb, it shot craps days outside of it's warranty. I wasn't that impressed with it to begin with, so I didn't even put up a fight, rather it made for a nice doorstop. Don't remember the model (you can see what a great impression it made here, heh.)
I have owned some pretty decent Behr stuff, but the verb was far from that list. YMMV.

It hasn't arrived yet so I can't say. It has 16 ADAT I/O, a s/pdif I/O and a midi I/O. I also ordered a A16U AD/DA converter that interfaces with this by firewire (you can use a standard FW cable, but you can't plug it into a FW port or it will die ;o)

Right now I'm using two Pulsat II cards, one with 24 ADAT I/O and one 16 channels midi I/O and the other with a Plus plate with stereo AES, a pair of balanced AD/DA's and a 32 channels midi I/O.

>Then there's this --

W.C. Fields said, "I never vote for anyone. I always vote against."

Funny, but practical too -- if he supports the mediocre guy in preference to the truly horrible guy, he moves things an increment in the direction he prefers... and maybe, by helping to keep the truly horrible guy from gaining power, he's helping to prevent some kind of unforeseen disaster that really would *not* have been funny...

Somebody else said something like: "the perfect is the enemy of the good" -- which also applies: you can miss a lot of possibly useful choices while waiting for the perfect one to fall in your lap.

-- holding my nose and voting tonight, as usual -- Chas.

Believe it or not, I just threw out all my lit on them. My guess would be SIMMs, probably non parity and SCSI drivesKind of cool!

<http://apnews.excite.com/article/20061107/D8L8G1KG0.html>So I'm working on this project tonight, recording 6 singers on 3 mics, for a total of 4 passes saved. 12 tracks. The last take was the best, so we went to work tweaking, tuning, slipping and sliding to match phrasing w/ old vocals. An hour and a half later we're done tweaking, it's time to begin mixing. I begin playback from the top. The new tracks aren't playing. I look at the edit window. All the new tracks and little rendered sections where I tuned are blank. I open the audio window thinking that somehaow Paris has lost track of their locations. I search for files. The last take's 3 tracks are gone, as are most of the tuned/tweaked bits and pieces. All that remain are the little files from using the Paris pitch shift function (which I sometimes do when AutoTune can't or won't work - like tuning a track w/ 2 or 3 voices on it).

I look at my client (fortunately a good friend and very philosophical kind of guy) and say "I wish I could offer you something more than an apology, but the tracks are gone." I tried scavenging the disk w/ Disk Warrior (I'm a Mac guy) to no avail. As I write this Norton Utilities is searching for .paf files. I have at least one other option for looking for deleted files, but for some reason I'm not feeling overly optimistic.

Has anything like this ever happened to any of you folks? Could this be a sector of my HD suddenly gone bad? Is there some Paris bug that deletes files if you hit a certain key sequence?

Thanks...

GanttThat HAS happened to me a few times also . after saving a project ,and opening it a few days later . some files just vanished, i know i didnt delete them . search for files came up empty.they were all on the same drive

too.

I guess paris didnt like those tracks:-)

you're MAC.

If you find something that works as well, I highly recommend getting that
drive removed as OS drive and set it up as something other than and making
sure that there is zero raiding going on with it. If installed as the OS
drive, you're writing to it everytime you boot and everytime you make a move
to recover.

One way to help on a national level is to report voting problems here:

<http://reportvotingproblems.org/>

And report it to your state's election officials.

Cheers,
-Jamie

have no idea why. sorry to hear it. you did search your boot drive
too as macs will put them in the library user or global folder. i've
also found that mac finds don't always work the first few searches
especially if the search phrase isn't exactly (case sensitive) the
same.

Don't know of any "keystroke" that could cause it.

Gantt, did you already scan the drive for any bad sectors? If there are any bad ones, there's a way to isolate that section so that it doesn't try to write anything further to those regions, so that you can finish the project without having to move everything to a new drive right away. I forget how to do it, but surely someone here knows this method.

And therein lies the problem with their gear - inconsistency.
Some people get pieces that work fine, while enough other people
get pieces that die way too soon, catch fire, etc. I wouldn't
chance it on this stuff myself... not worth the risk unless you
don't mind taking high-percentage risk on throwing away however
much money you spent on the items.

>OK, I'm thinking about taking the plunge into this Creamware stuff - it sounds really interesting to me, HOWEVER...

a.) The cards themselves don't come with enough AD/DA i/o's to do a full session, you have to use another solution, such as their A16Ultra 16-channel convertor box. While this, plus one of their cards, remarkably gives you that which I was saying someone really needed to come up with (in another thread last week), the problem therein is...

b.) ...I've seen nothing good written about this A16Ultra convertor box - the best that anyone seems to be able to say about it is something along the lines of: "Some describe the sound as kind of dark, and it's a little noisier than the RME's". Well, this doesn't cut it, IMO; I really like the RME's, they're clean to the point of pristine & certainly

not "dark".

c.) Now, the cards DO each have 2 lightpipe in's... so I could use the RME's in stand-alone mode, I THINK - has anyone tried using the Multifaces in stand-alone mode? Since the Multifaces ARE my interfaces, I don't have any other way of getting the signal into the computer in order to try them in stand-alone mode (I guess I could grab a cheapie card that had a lightpipe input in order to demo this, but if anyone knows if this would work already, it would be better than buying a card, loading new drivers for it, yada, yada, yada).

d.) Does anyone know of a high-quality AD/DA box that has 16 inputs & 2 or more lightpipe outs? I've looked around quite a bit over the last couple of days & haven't been able to locate anything like this.

NeilHI Neil,

The Multifaces do not have an internal memory like the Fireface series. If for what reason they ever lost power then they would lose whatever setting you did. You would have to have the PCI card installed in order to redo those settings.

(859) 635-5762Hey,

I used the MSI BXMaster for years actually still have it and and it works. Over clocked from 600 to 800mhz.

Currently using an ASUS board with 2.66mhz Quad-Core. :)

We get engineering samples from Intel and AMD.

Its nice being able to run projects at a 48k buffer that I couldn't run at 256 before.

(859) 635-5762Neil,

You could get two 8-channel AD/DA units. The real problem I see in this marketplace is the divide between really high quality AD/DA and interface format. Lynx, Mytek, Apogee, etc. come stock with AES interfaces (which are nice and pro and have some sort of locking-style connectors). However, the only cards that support this on Windows XP are the Lynx and RME PCI cards. No one makes a damned PCIe for this except Apogee, and for some moronic reason they're OSX only. And none of the Firewire interfaces do multi-channel AES either...

Good luck with your search!

>Hi Neil,

For what it's worth, Paris converters were are described as being "dark" sounding. That's not a bad thing when you're using native apps like Sx/Nuendo & Pro Tools which have a very clean sound. Adding converters with some character is not a bad thing. Some people don't like pristine clean Myteks..I prefer Apogeos AD/DAX 16 converters with soft limit..

I had a \$4500 fuckusrite 215 crap out days out of warranty .I was NOT
happy. they were nice enough to fix it for \$250. luckily my good friend
morgan sent it out for me. it probably would have been more money if i sent
it out myself.If it happens again im going to plink holes in it with my
AR-15 and watch it burn in my fireplace.

If I were to use the Multiface as a stand-alone convertor, then any settings (like samplerate/bitstream rate, monitoring levels, etc) would be done in the Pulsar card/software anyway.

Am I missing something else?

more, depending on if you're using any of the digital i/o's, as
well)... I was just thinking that if I DO have to buy another
convertor box - for example if the Multiface's don't work or
don't work well in stand-alone mode - it'd be nice to have 16 in
one unit.

I think if I were to get up into that price range, I'd just go
for some Lavry Blue series.

NeilHey Neil,

I'll have the A16U in here hopefully early next week. If you read the
remainder of the thread on Planet Z, you'll see quite a few posts attesting
to the fact that the older A16 units had some problems but the newer one is
better....yadda, yadda. I'll let you know my thoughts once I get it wired in
and record something through it.

As LaMont said, the Paris converters are considered sorta dark too. I like
their sound personally.

A16. I presume the
dark sound reference is from the converter filters .anybody have a new IC
master set?
16 channels for under \$800 sounds great to me.

>Deej, yes, this is what I hear... look on the back & you'll
notice a little a/c adapter jack - if you power it up from there
(instead of it getting its power from the PCI card), you're
SUPPOSED to be able to use it as a stand-alone box & either
SPDIF or lightpipe out of it.

You know, I just realized I could probably try this by simply
powering one of mine up that way, hooking up a mic & a mic pre
to it & running out of lightpipe to the other one, keeping the
second one interfaced to the PC through its PCI card. I suppose
if it works like that, it'd work on any lightpipe-able interface.

Only problem there is, if I get a Pulsar card & I'm tracking at
88.2k, I can really still only get 8 tracks at once into the
Pulsar card, even with two Multifaces (lightpipe protocol drops
it from 8 channels per "pipe" to 4 if you're above 48k
samplerate). Hmm... in fact, considering that, even if I got
their A16Ultra, I wonder if I'd actually be able to do 16
channels at once on one Pulsar card?

ARGH! There is no simple solution, it seems.

Well, I'll try the stand-alone thing nonetheless... maybe what I
could do is indeed get one of those A16Ultra's & keep at least
one Multiface for overdubs if I don't think the Ultra is
transparent enough for something like a nice clean vocal track,
for example.

Will try that stand-alone thing I mentioned & keep you posted.

I think the answer to this is a resounding *yes*, if you use theZLink

interface.

I'll give the Multiface a try as a standalone box in the next day or two.
I'll need to scrounge up a PSU for it.

>Hey you guys...

I am glad that made some kind of towards Pulsar and what it can do with Paris.
Regarding the 88.1khz only being 8 channel ,no you can have 24 channels at
88.1 !!

Simply by using 3 pulsar cards !

Each has 16 adat ins at 44.1 and 8 at 88.1.

Regarding now ad quality !

Get an ad converters at midlevel price that accept wordclock and get Mytel
studioclock !

Your converters will be automatically upgraded !

I am convinced that the very expensive ones have great jitter rejection reclocking
whatever that is "clockwise" that makes all the difference from a point and
thereafter.

RME ADI-pro8 converters were so and so in my own oppinion.

I like more the Paris !< but now rme clocked from Mytek is a damn truly exceptional
ad converter.

Oh frogot I changed also the stock shitty 4580 opa to a LN6172.

I have never heard a converter like this now !

So get yourself a good mid level ad like Adi-PRO even Marian has a good ad/da
8 channel converter at 320 Euros !!

Clock the from a clock like mytek.

Regards,

Dlmitrios

that helps support and direct much needed improvements.

Without that record, the inertia of even a failing system is difficult to overcome, and things may continue to get worse.

>I'm disappointed in both attitudes. It's disappointingly easy to justify
dumbing down messages for the electorate because political consultants
have found a measure of success doing exactly that. Which means the
electorate has failed to be as discerning as you are in that regard.

OTOH, politics in the USA is a participatory system. Sitting back and
grousing about the failures of others is a weak form of participation.
Stronger opportunities exist, including:

-Direct correspondence and personal contact with candidates (where you
can ask for their stands and plans and discuss your perspectives). Many

candidates seek this out, they want your vote, and actively look for input from voters and opportunities to explain their outlooks.

-Membership in a political party of any stripe where you can influence policy platforms.

-Letters to the editor in local papers.

-Support for any candidates who do live up to your standards by volunteering or donating.

-Running for office yourself.

-Finding an issue that matters to you and advocating your own action plan with elected officials.

-Joining or starting organizations that advocate action on one or more issues you care about. You could, for example, start crusading for an actual "none of the above" option on the ballot. Which is, BTW, a great idea.

Those and a myriad of other options exist.

Cheers,

-Jamie

>Neil,

You can use the Multiface in standalone mode. How to do this:

Go into the RME control panel and open the settings dialog. Change the setting to "Disconnect". It will now function in standalone mode.

The power supply for the Multiface 1 unit is called the:

HDSPNTCB

In disconnect mode you will be able to use the ADAT ports to connect the Pulsar card and use the Multiface's A/D and D/A converters and you will also be able to connect external stereo A/D and D/A converters to the Multiface s/pdif I/O.

Very cool indeed.

Deej
