<DIV>Its possible, but not likely, =
especially if its=20
not a new unit, which would be more likely to have a defective=20
component. Something caused a current overload through it to =
burn it=20
up. But apparently not a direct short which would have blown =
the fuse=20
as well. I've seen many leaky filter caps do this - these are =
the=20
large caps that filter the ripple voltage or small ac component off =
the=20
DC. A blown voltage regulator is another likely suspect, as =
far as the=20
PS itself. Can the PS run by itself w/o being connected to the =

M80? </DIV>
<DIV> </DIV>
<DIV>ich Lamanna" <<A=20

;...</DIV>
<DIV>Hello, Easter greetings by the way. =
Hey the=20
other day I smelled smoke and heard a crinkling =
sound in the=20
back of my preamp rack and later discovered the cause was my =
Presonus=20
M80's power supply which is now deep fried. Well I took the =
supply=20
apart and found that this dark grey thing on the cuircuit =
board, I=20
think it's a diode ->I, melted right off of the board. Any =
one know=20
what this is? I can't get a picture just yet up on the net but =
I'll=20
try and describe it.</DIV>
<DIV> </DIV>
<DIV>It's appx. 3/4" by 1/2" by 1/4" thick, has =
4 pins on=20
the bottom which solder to the cuicut board, dark grey =
colored=20

and is coded:</DIV>

<DIV> </DIV>

<DIV>-->| RS*202L</DIV>

<DIV>RU </DIV>

<DIV>+ AC -</DIV>

<DIV> </DIV>

<DIV>Anyone of you electronics =

wizards </DIV>

the heck I can find one of these?</DIV>

<DIV> </DIV>

<DIV>You guys are g
