ing like that - I mean, it's just a finger, and this type of cancer is very unlikely to spread. Bad news is - well, it's what you hold the guitar pick with, so SOMETHING's gonna have to change there... i'm sure i'll still be able to play, but probably not like I can now. Right-hand stuff on the keyboard's gonna be even tougher, since that's not my main instrument to begin with, but it's what I mostly write on. Anyway, it's not like I'm losing a whole ha

nd, I'm just a bit pissed (OK, MASSIVELY pissed) that I'm not going to be able to play anything at the level I currently am able to - in which case, what's the point?

Anyway, here's the Weird Question part: I'm going in for the surgical consult on Tuesday, and the Doc is going to give me three different options, essentially (he gave me a run-down over the phone) and what I need to decide is "How much of my finger do I want to lose?" The least-invasive is a thing called Mohs' Surgery, for which he has a specialist at his practice (whom I'll get to talk to on Tuesday). It takes off the least amount of tissue, and in the case of my particular situation, wouldn't remove any bone, either. Two other options would involve complete surgical removal of a portion of the entire section of the finger, down past the first joint, or even further.

SO... the wierd question is: Do any of you know any musicians with a prosthetic finger? Doesn't matter what instrument they play at this stage, I'm just trying to get an idea of if I have to make a choice of losing a small part of it or losing a larger part of it, which is better when it come

s to a

prosthesis, because I want to look into that, as well. The Doc says any of these methods would work in my case, because of where it's located & that it's still small in size & hasn't spread much, so I don't really have to be concerned about "which one will be most effective?" IOW, I need to find out how much is not enough, how much is too much, and how much is "just right" for being able to effectively employ a prosthesis from a musician's standpoint. Might help me make a more educated decision.

Anyway, if anybody knows of anyone, that'd be great; I'd sure appreciate it.

Lemme know!

Neil:-P I was in a comedy club in Vancouver once where the comedian asked if anyone was from Surrey... he then proceeded to welcome them to Canada... if you had ever lived there, you would understand the joke... ;-)

David.

Neil,

If your doctors agree you have the same prognosis with the least invasive surgery it sounds like that's the way to go. I should think the prosthetic work being done today is fairly custom. They'll make it work for you if you tell them your needs.

On a side note, I am a guitarist also and really did a good job of mangling my left hand index finger with a hedge trimmer. Right where it touches the strings... I played incredibly differently for 6-8 months. I couldn't really use it at all without it feeling like the flesh would tear off again. It was difficult at first then I realized I was playing some things better because of it. I tried lots of ideas and the other = fingers adapted better than I would have guessed. The music suffered at first = but shortly thereafter became more exciting because of the challenge.

You'll get through it either way but make sure you choose what is right = for longevity!!!
