%.

by as much as 97% or increase it up to 122%. Compared with HEVs, PHEVs increase it 130% and EVs increase it 483%.

17%-296%. Compared with HEVs, PHEVs may increase SOx by 283% and EVs by 1120%.

Regulations are in place and technology exists to contain any of these criteria pollutant emissions that power plants create. Scrubbers can handle SOx, selective catalytic reduction technology can handle NOx and mercury, and baghouses and electrostatic precipitators can contain PM. The 1990 acid rain amendments to the Clean Air Act cap total acid rain emissions, so no m
