'69.

Actually, I always thought the '70-'71 was the most beautiful. Odd, but beautiful.

A couple of years ago, just after the dot.com bust, I was able to purchase an Equitech balanced power conditioner for very little on eBay. It does a completely effective job or removing hum, noise, etc. and also has built

in surge suppression. I wouldn't have ventured \$1K+ to find that out, but for \$300 I took the chance. Highly recommended. If you watch the whole show it's obvious that it is not lip sync'd. The performances are too raw for one thing. A lot of mistakes with mic technique where the audio and video agree, etc. Obvious nerves showing through in the performances. Compressors being nailed way too hard on occasion. A lot of things pointing to a live performance.

peace,
T.Rossi

>Hi,
My MEC fan seems to have got progressively louder over the years. I'm hoping
to start tracking in the same room as my MEC. I heard a replacement fan may
be all that's required. Can anyone recommend something quiet to do the job.

Any tips on quieting down pcs (on the cheap!) - e.g. iso boxes, etc - most
welcome.

Thanks,

DanHi DeeJ - just to check:

you mix in paris with No Limit (settings'd be nice :)), and then take it to soundforge to dither with L2? (Otherwise I can't see a way of getting the L2 to dither the whole mix within Paris, at least effectively).

Thanks,

Dan

I think that's the best way, because you can

fit it 100% to your needs and to your equipment...

.....Of course, if you are familiar with technical drawing,

geometrics, mathematics and tools... ;-)

Cheers!

S
