brain, feeling some pain,
Ambulance you'd better, hit top speed,
E.R. ahead, trouble behind,
Doctor please be ready, to fix up my mind,

:DI can't be absolutely positive yet but removing these questionable plugs
does appear to have solved the problem.

I'll bringing up some of the first projects I did shortly they were
installed and see if they crash PAris...if not I've found the culprit

as an aside, Tim - Stripwave's developer said he might update his app in
the new year as a result the 24 bit wav file I sent causing a complete crash
of his version of stripwav...that would be nice

t.)

WinXP SP2 (.NET v1.1) -optimized for audio per the recommended XP tweaks.

AMD 64 4400 X 2

4G Corsair 3200C2PT CL2

GEForce 5500 dual head AGP - IRQ 16

Magma x 13 w/ 4 x UAD-1 cards-host in mobo PCI#4 -all on IRQ 19 and not sharing with any other device.

Magma x 7 w/ 1 x Creamware Pulsar II and 1 x Pulsar Home-host in mobo PCI#3

1 x Creamware Pulsar II- PCI#2

NOTE: two of these ulars cards share IRQ 18 with the LAN controller-it is active in the bios and I'm having no problems. The other card is on IRQ 17 and not sharing with any other device Also, in order for this to work the Creamware STDM cable has one connector 24 inches from the other two so that it can reach from the Magma chassis t

o the mobo-we thought this might possibly introduce some clocking issues, but it hasn't given me any problems.)

System is clocked to a Mytek WC distributed by a Lucid GenX-6

Steinberg Houston controller interfaced via USB

Korg Kontrolpadinterfaced via USB

ATA 133 7200 RPM system/sample and audio drives
Sony internal DRU 800 CD/DVD drive

USB 2.0 external HD

USB dongle for Cubase

So far the variables as far as clocking are concerned are relatively minimal. I'm going to be wiring in all of my outboard digital processors today and interfacing them with an ADAT I/O on the Scope Home card using an RME ADI4 DD interface. From there, these processor can "in theory" be interfaced with the Cubase system, the Scope system and the Paris system in

a number of ways and so I'll have both the Cubase and Paris DAWs integrated by the end of the day. Due to a much more simplistic clocking scenario with the Pulsar cards, I'm hoping that I won't have the stability issues that I was having with the 3 x RME HDSP cards.

Cheers,

Deej

>You'll be good if you just use PCI slot #4 for the Pulsar card.....
doesn't share IRQ with anything. Get yourself a nice NVidia AGP card and
you're there. I know you know better than to go with anything Matrox, but

that has been proven on my rig to be a *really* bad choice. A surprising development since the old G450's played fairly nicely with the KT700 chipset on my old Paris A7V8X mobo. On the A8V they are the kiss of death.

Deej

resistance research.

I just played a benefit for a hep C organization:
<http://www.hepc-connection.org/> - Looks like a good resource for information and support for anyone who just got the bad news.

Deej, wow, that's lucky alright! Bummer that he had to have a cerebral hemorrhage. But if you gotta have one, the ER is the place to do it.

Cheers,
-Jamie

You can click on the image to magnify -- almost like you could grab those faders...

I'm imagining that the new partnership of SSL and Soundscape will produce a similar package by this time next year -- SSL sound combined with all that processing power in a similar (or smaller) footprint would be pretty cool for modest operators such as myself.... We'll see...

>Howdy! Long time no talky, as I've been a busy boy.

You may remember that I was having those classic Paris feeze-ups due to IRQ sharing, with 4 EDS cards in a new Asus motherboard with 4 PCI slots.

Finally got in touch with Asus, and they informed me that IRQ assignments are commandeered completely by Windows XP, a statement born out by Microsoft's "knowledge base".

So, I'm unwilling to disable USB except as a last-resort. USB IRQ sharing was a likely suspect as I remember...

What are my options? Just tediously try 2 and 3 card systems in various PCI slots until I come up gold? Try to weed through the Windows IRQ assignment slists and glean some sort of way forward?

I'm pretty lost here. I need at least a 3-card system...

JimmyAre you sure? Can't you turn OFF PNP in the bios and assign IRQs? That's what I always did.

John

Look in the BIOS settings for PnP (or Plug n Play) OS installed and set to no or off. This will allow you to make the IRQ assignments manually. XP will then find those assignments and use them.

Hope this helps!

Mark

Folks, this is some really good stuff.

For the longest of times(3 years) I have have been sitting on the fence about jumping in a full-blow Pt-HD rig/ with mixing controller. The studio where I work has 2 HD setups, but my personal studio uses Paris & Nuendo, along with PT-M-powered, summed to a soundcraft Ghost (56 channels) analog mixer.

Great sound, but I want a One-Stop-Solution.

I'm thinking that the Fairlight path offers what I've been harping on:

-Slick Digital Mixer (Eqs &Comps/gates/Limiters)

-With built-in high-track count audio Recorder.

-Killer editing

-Intuitive layout

-Ability to use 3rd party plugins

-ONE VENDOR!!! (smile)

1(one) Crystal Core technology is equivalent to 8 HD accel cards!!! What if you were to use 2??? Yikes!!!!

This i the 'breakthrough ' in breaking the current offerings, even with the just announced 'quad-core' processors.

I'm jacked.!!!

I have Giga 2.5 running on an old Asus A7V8X-X mobo with a Athlon 2600+ and 500 MB of memory, AudioPhile 2496. Win XP with SP II. I don't ask to much of it, but it runs fine. I run strings and piano from it into my Paris rig.

It's basically a dedicated system. I have SONAR 2.0 loaded it for MIDI triggering, but I haven't really used it. I also have a B4 organ program.

You can get the Asus board cheap on ebay.

And this bad boy costs how much, again?

Neill'm hearing 18k to start..So, maybe 30-40k might be realistic for the configuration I'm wanting..

Easier for compatibility's sake to - import/export & all that.

Not that I'm trying to sell you on PT, but I'm just curious.

OK, point taken, but you can get into HD for far less than a
loaded system like you're talking about.

>3) If I need to do the "yes" I have PT. I do have the 96(48track stereo)

The big issue I have with PT now (it USED to be that I thought it sounded like ass, but the new convertors rock, and I think they've definitely improved the ITB summing - judging from the few mixes I've heard that I know were done ITB), is that you're locked-in to Digiblah stuff from front to back... I like those HD convertors, but I don't like 'em \$3,000 better than the RME's I have right now, for example. If I could get away with just buying an HD Core card, I'd be there as we speak.

You're still summing in Native, essentially, with an LE system, though, right? Those aren't DSP summing, are they?

I'm playing back a 40 track project interfacing the Pulsar ADAT with Paris ADAT. It's very stable and sounds frigin incredible.

I'm still working out a few routing FU's that I seem to have created. Also, I'm not entirely happy with the Pulsar midi routing to/from my digipatch digital patchbay. It's got me bamboozled right now but other than that, I think I'm going to hold off on the Fairlight for a while. this thing sounds great and so far is extremely stable.

Cheers,

Deej

I've got Cubase synced to Paris ADAT using the Creamware sync plate. This little gem seems to allow timeline chase by Cubase while still allowing both platforms to sync to WC. This always created a trainwreck with the RME cards.

Right now this system is rock solid stable.

Right now I'm getting ready to give Gary a call.I can't seem to grok how to get external FX set up between the Scope environment and Cubase SX. Once I get that happening, I'll have my basic mix scenario recreated. This is something I'm very comfortable with. After that, I'm going to get outside the box a bit and have some fun with the Creamware routing. It's possible to do all sorts of stuff using both direct connections between the Pulsar ADAT I/O and the Pa

ris ADAT I/O while also routing the same Cubase chanel to the Creamware mixer, grouping them, applying various goodies and returning them in parallel to Paris tracks or on inserts. No'mo submix limitations for groups.

I can't for the life of me figure out how to get external FX set up in Cubase/Creamware but I'll get it figured out.soon.....I need to get the 16 analog I/O and 4 x stereo pair of ADAT I/O configured for mono and stereo external insert and send FX.

> NeilDJ,

For Cubase with scope:

Under software I/O window there are asio destinations and sends.

Choose 64 floating asio 2 that can have up to 64 routings.

Now the destination asio sends audio to cubase which shows inside SX by simply routing.

Why is it so difficult ?

Just think the asio as inputs and outputs of SX !

Let me know where are you stuck...

Regards,

Dimitrios

I bought an Ultra 160 controller and SCA adaptor (80 pin to SCSI 3) As per
the IBM guy.
A terminator is built in to the ribbon cable.

It looks exactly the same as the setup I had in my Paris system.

The SCSI boot utility detects the drive, but when it tried to verify the media, it times out. If I boot Windows, I get the boot screen, and just when it is about to go to the XP logon screen, I get black. The SCSI spins, stops, spins, stops.. for as long as I keep the computer plugged in.

I confess that I have no idea what jumpers to worry about (disable parity, delay spin, etc.) But right now, I can't do an entire research project on this, and I don't have a studio anymore anyways.. I just got a bit nostalgic. So does anyone have any ideas off the top of their head? Is the drive toast? It worked a few months ago before I tossed the old computer, but that was with the old adaptor and controller.

Any help is appreciated.

Thanks

JohnParis for now. I want to basically recreate the mix scenario I had with the RME cards so I can get some work done.

I'll also be working with the Scope mixer later on. I just want to recreate a familiar mix environment fro the time being.

If you know anyone that has an "old" AVID video editing system, see if you
can hook the drive up to their system, and copy the files to their newer
drives which are most probably IDE, and get them to burn a DVD or the like.
Never know, it may work.

>I've got everything happening as I had hoped so far. The RME ADI4 DD is interfaced with the AES I/O of my hardware reverbs, bussing through the Scope mixer and returning to 4 x Paris auxes on Mec 4. this is exactly what I had envisioned when I went crazy and decided to jump into this feet first.....and it's drop dead./rock solid stable.as in dedicated hardware DSP based stable. I'm very impressed so far.

The only thing I have yet to do is to patch external hardware across the inserts in Cubase using the A16U AD/DA converter. Once I've got that working, I'll be a happy camper. That's going to happen either later tonight or tomorrow.

Deej

DeejAw crikey, another \$2k out the window. Why couldn't you say it really sucks? You're not even a synth guy and you like it that much.

Now we're just down to getting ADAT I/O or Z-link. Not a big deal for someone who doesn't record a lot of live instruments, I guess, but I think one of the 14 DSP cards is in the very near future.

TCB

>I just got the A16U happening. Nice converter. Don't have enough hours on it
to compare it to anything but it's not muddy sounding to my ears. I'm
interfacing by ZLink. One glitch that I've hit here is that I'm out of
resources in the Creamware environment. The DSP meter shows only about 1/3
of the resources of the `15 DSP chips I've got here to be used, This isn't a
huge issue as I've got 4 x UAD-1 cards that aren't even breathing hard, I've
got a lot of stuff happening in the Creamware environment and I have a
feeling that one reason for this resource situation is because I'm running a
rather unorthodox STDM cable from the first card to the other two and this
may actually be restricting what I'm able to allocate. This cable is 24"
long whereas a normal cable span is 4". Due to this, the system won't let me
patch any more stuff, but I've got my patching accomplished to do what I
need. Once I get my hands on another 13 slot Magma, this issue will likely
go away.

Stable Thad.....as in stable like Paris can be when not abused and made to
perform unnatural acts. That's something I've never really felt with a
native platform.

;o)

>Just an FYI.....I've been running this machine synced to Paris since 10:00 this morning and I've been configuring the ASIO drivers fro various templates and playing back projects pretty much nonstop for 11 hours. Not one crash. Not a single one. Even if it didn't have all of this incredible (and intuitive) routing functionality and onboard DSP, I would have paid the extra \$\$\$ just to achieve this kind of stability.

Now I hope someone doesn't read this and go out and drop a bundle on this hardware and it not function properly, but in "my" particular situationwith "my* particular mobo and peripheral hardware, it's a friggin dream com true.

I've got a 40 track project playing back looped in cubase right now. I'm just going to let it go for a few hours and see if I can get it to crash.

You can still use any native DAW front end you want. With Soundscape and PT,
you can't.

For me, I reviewed a Pulsar computer card way back when and also the Noah synth just as Home Recording was gasping its last and I had to go get a real job again. Creamware writes some *superb* sounding synthesizers, though I understand some of that development team has moved on. It's also a semi-open platform so third parties have gotten involved as well. As a synth guy, John Bowen was one of the main people behind the Sequential Circuits synths back in the day, including the ProphetVS and then after SC was swallowed up by Korg the Wavestation series, among others. Now he develops for Scope and sells his stuff at <http://www.zargmusic.com/>. For me, anyone putting Waldorf Wave oscillators into a slightly hot-rodded Prophet 5 emulation is pretty cool, when it's John Bowen that's something like if Bob Moog had decided to learn to program SHARCs and started another company. Oh, and there's a _sick_ modular synth that comes with it and a third party package of modules that sounds dreamy as well.

So for me I expect the Pulsar will be mostly a synth card, plus some effects, and the UAD will continue to be my 'bread and butter' EQ/Comp card. That will leave me with native stuff only for really low CPU things like samplers and Absynth. Sounds like a good rig to me.

>.....well.....I was talking about running out of resources earlier. The secret to insert them in the mixer rather than add another module to the setup. When you do this a sreen pops up that asks if you want to reallocate the resources. You tell it yes and it reallocates.. then you have to go to your sync window, switch the sync source on and off and then go to your Cubase device manager and reset the ASIO driver. That solves the problem. A bit of a PITA, but considering that I'm asking this thing to do some things a bit outside the box, it's nice to have this functionality at all and to access to the Scope DSP effects that I had already written off. The stock FX for this system are very good and when added to the DSP of the UAD-1 cards, it's the kind of wretched excess any DSP lovin' geek could appreciate. I've got the Vinco compressor on a vocal track right now. Think UAD-1 1176 but with a bit more clarity overall. the de esser is also very nice and transparent, I normally use an SPL hardware de esser, but this little applet may change that.

(love this part...)Thanks Thad and DJ - that's what I've considered it for over the years - a synth card mainly. Good to hear that kind of recommendation. While I would love to fill the room with some hardware synths, this sounds more practical to augment the softsynth library at some point, as long as Creamware lasts a bit longer than Paris or Lexicon's Studio 12T, etc.

Regards,
Dedric
